JOB G & N SYSTEM OPERATIONAL TEST | JDC 12206 REV. V PAGE 1 OF 29
INITIAL TDRR 29882 D.S. PGS 3

SUBSYSTEM G & N SYSTEM | ASSY.

DESCRIPTION The purpose of this test is to check gross G & N System operation. Computer DSKY interface is checked by performing a computer controlled DSKY test which verifies correct DSKY character displays. A manual DSKY keyboard test is performed to verify correct key-character display operation. An alarm and interrupts test checks computer

INTERVAL

TOOLS AND MATERIAL JDC 12206 CTS UPLINK Tape, P/N 2901626-0(4

DESCRIPTION (cont)

program error sensing capabilities. Finally a computer controlled test of PIPA and IRIG operation is performed with OG, IG, and MG at 45 degrees. In this position each PIPA I_A is sensing some portion of positive g and the accumulative PIPA measurement should be the value of local g. IRIG performance is checked by measuring the effect of the horizontal component of earth rate (cos x) in the same orientation. The IRIG and PIPA is performed at normal, low and high prime power levels with the CGC self check being performed concurrently.

IMPORTANT: 1. Obtain the time of day of high order scaler overflow from JDC 12204. To prevent erroneous test results, do not enter a PIPA and IRIG test within 0.2 hours of that time.

2. Insure that connector assembly (2003099) or Restart Monitor module (2898989) is removed and W226-P1 is connected to the CGC test connector before proceeding with this JDC.

VERIFICATION WITH SIDL REQUIRED BEFORE USE

---

3. When only one DSKY is available for testing, the following conditions will occur in steps 12, 16, 20, 24, 26A, and 28:
   a. With DSKY in NAV DSKY location, the G&N Caution lamp on the Monitor Panel will not light as specified.
   b. With DSKY in MAIN DSKY location, the PGNS lamp on the Indicator Control Panel will not light as specified.

INITIALIZATION

NOTE: The CMC warning lamp on the Indicator Control panel may light for approximately 10 seconds when +28 VDC CMC Operate Power is applied.

CAUTION: Use extreme care when tilting G&N Mounting Fixture to insure that components do not strike cradle locking handles.

1. Insure that the system is in ISS STANDBY with the CGC/LGC POWER ON and the 400 CPS POWER ON pushbuttons on the Test Control panel lighted. Set the Cradle Assembly to the 32.5° position.

DSKY CHECK

NOTE: 1. Insure steps 2 through 30 are performed for both MAIN DSKY and NAV DSKY except when only one DSKY is available for test. When only one DSKY is available, test may be continued after steps 2 through 30 are performed with the one DSKY in the NAV DSKY location and then repeating steps 8 through 30 with the DSKY in the MAIN DSKY location. Before changing DSKY locations, downmode the system to OIA ON mode according to procedures given in JDC 12204.

2. Verify that all CTS ALARMS lamps (except #6) are out. If not, press ALARM RESET pushbutton on Programmer and Monitor panel. ALARMS #6 lamp shall remain lighted until completion of step 115.

3. CTS ALARMS lamps indicate the following alarms when lighted:

ALARMS #1 - RUPT LOC
ALARMS #2 - CTR FAIL
ALARMS #3 - TC TRAP

ALARMS #4 - OSCILLATOR FAIL
ALARMS #5 - NIGHT-WATCHMAN
ALARMS #6 - PIPA FAIL
ALARMS #7 - VOLTAGE FAIL
ALARMS #8 - SCALER FAIL
ALARMS #9 - WARNING FILTER
ALARMS #12 - DOUBLE SCALER
ALARMS #15 - GOJAM
ALARMS #18 - E-MEMORY PARITY FAIL

CTS P/N 2014042-071 only

2. Perform following DSKY operations:

a. VERB 36 ENTR
b. VERB 21 NOUN 27 ENTR
c. 00011 ENTR

3. Observe that all 9's are displayed in the PROG, VERB, NOUN and Row 1, Row 2, and Row 3 character positions. Check that all applicable character electroluminescent elements and all pushbutton electroluminescent elements are lighted. Including the 9's, the following shall be displayed for approximately 5 seconds:

a. 9's
b. 8's
c. 7's
d. 6's
e. 5's
f. 4's
g. 3's
h. 2's

g. -67890 Do NOT press ENTR

6. Observe that Row 1 contains +12345 and that Row 2 contains -67890.

7. Press CLR pushbutton twice on the DSKY. Observe that Row 1 and Row 2 are blank and that VERB 21 NOUN 01 continue flashing.

NOTE: 1. The remainder of this JDC contains two separate procedures. Perform the procedures contained in the right column of each page if a CTS UPLINK tape is being used. Perform the procedures contained in the left column of each page if a CTS UPLINK tape is NOT being used. Do not interchange steps of columns.

2. The UPLINK ACTY lamp on the DSKY will light during performance of the CTS UPLINK Tape Load Procedure in this JDC.

3. Insure that UP TELEMETRY switch on Indicator Control panel is set to ACCEPT when performing the CTS UPLINK TAPE LOAD PROCEDURES.

MANUAL LOAD PROCEDURES

CTS UPLINK TAPE LOAD PROCEDURES

NOTE: Prepare the CMC for the UPLINK code by establishing the following conditions on the CTS:

(A) XY Interface panel - Press to light POSITIVE, NEGATIVE, and TAPE READER pushbuttons. Set AGC INPUT COUNTERS switch to 9.

(B) Programmer and Monitor panel - Press to light AGC INPUT-CTR and TAPE FREE RUN pushbuttons.

(C) Logic Drawer No. 2 - Set AGREEMENT B digit-switches to X01X3C70. Set AGREEMENT B switch to STOP.

(D) RDC Interface panel - Press to light CH33-10 pushbutton.

(E) Tape Reader - Set Power switch to ON. Load the CTS UPLINK tape. If alarms occur, press PROCEED and ALARM RESET pushbuttons on

SUBSYSTEM G & N SYSTEM

ASSY.

DESCRIPTION The purpose of this test is to check gross G & N System operation. Computer DSKY interface is checked by performing a computer controlled DSKY test which verifies correct DSKY character displays. A manual DSKY keyboard test is performed to verify correct key-character display operation. An alarm and Interrupts Test checks computer

DESCRIPTION (Cont)

program error sensing capabilities. Finally a computer controlled test of PIPA and IRIG operation is performed with OG, IG and MG at 45 degrees. In this position each PIPA I_A is sensing some portion of positive g and the accumulative PIPA measurement should be the value of logal g. IRIG performance is checked by measuring the effect of the horizontal component of earth rate (cos x) in the same orientation. The IRIG and PIPA is performed at normal, low and high prime power levels with the CGC Self Check being performed concurrently.

INITIALIZATION

1. Insure that the system is in ISS STANDBY with the CGC/LGC POWER ON and the 400 CPS POWER ON pushbuttons on the Test Control panel lighted. Set the Cradle Assembly to the 32.5° position.

MAIN DSKY CHECK

NOTE: Insure step 2 through 18 operations are performed on the MAIN DSKY.

2. Perform the following MAIN DSKY operations:

VERB 21	NOUN 27	ENTR
00011		ENTR

3. Observe that all 9's are displayed in the PROG, VERB, NOUN and Row 1, Row 2, and Row 3 character positions. Check that all applicable electroluminescent elements are lighted. Including the 9's, the following shall be displayed for approximately 5 seconds.

a. 9's

DATE ______

m. Observe

VERB 23	NOUN 26	Flashing

n. 00003 ENTR

o. VERB 30 ENTR

18. Verify that the RESTART conditon lamp on the MAIN DSKY and PGNS lamp on the Indicator Control panel are lighted. The G/N CAUTION lamp on the Monitor panel shall be lighted. VERB 05 and NOUN 31 shall be displayed and Rows 1, 2 and 3 shall indicate 00000 on the MAIN DSKY. The AGC ALARM lamp 5 on the Logic Drawer No. 1 of the CTS shall be lighted.

19. Press the RESET pushbutton on the MAIN DSKY. Enter VERB 36 and press the ENTR pushbutton on the MAIN DSKY.

NAV DSKY CHECK

20. Repeat steps 2 through 19 for the NAV DSKY.

IRIG AND PIPA TEST INITIALIZATION

21. Press the ISS OPERATE pushbutton on the Test Control panel.

22. Connect the input bus on the Digital Voltmeter (DVM) by setting the CROSSBAR CONTROL on the Primary Signal Selector panel to 175.

23. Adjust the G & N POWER ADJUST control on the Test Control panel until the DVM indicates an input bus voltage of 28.8 (±0.30) vdc. Record indication.

CGC SELF CHECK

24. Perform the following DSKY operations:

a. VERB 21 NOUN 27 ENTR

b. Observe

VERB 21	NOUN 27	Flashing

c. 77767 ENTR

Allow the test to run 5 minutes. Record any failures indicated by VERB 05 and NOUN 31 being displayed on the DSKY's. If no failure occurs, write none on the Data Sheet.

PIPA AND IRIG TEST (Nominal Voltage)

25. Insure that at least 90 seconds have elapsed since performing step 21 and that the PIPA loops have closed as indicated by a butterfly pattern on the PIPA monitor scope of the OIA.

26. Perform the following DSKY operations:

a. VERB 57 ENTR

b. Observe

VERB 21	NOUN 01	Flashing

c. 00004 ENTR

d. Observe

VERB 16	NOUN 20	Displayed

The NO ATT lamp shall light momentarily then go out.

27. In approximately 15 minutes VERB 06 and NOUN 66 will flash. Local gravity as measured by X, Y, and Z PIPA will be displayed on Row 1 and Row 2. Record indications. (During the 15 minute interval, Rows 1, 2, and 3 will indicate approximately 04500, 31500, and 45000 respectively and no program alarms shall occur.)

DATE ________

---

28. Enter VERB 33 and press the ENTR pushbutton on the DSKY.

29. When VERB 06 and NOUN 66 flash the horizontal component of earth rate on the X, Y, and Z IRIGS will be displayed in Row 2. Record indication. Record any failures indicated by VERB 05 and NOUN 31 being displayed on the DSKY's. If no failure occurs, write none on the Data Sheet.

30. Connect the input bus to the Digital Voltmeter (DVM) by setting the CROSSBAR CONTROL on the Primary Signal Selector panel to 175.

31. Adjust the G & N POWER ADJUST control on the Test Control panel until the DVM indicates an input bus voltage of 25.8 (+0.25, -0) vdc. Record indication.

PIPA AND IRIG TEST (Low Voltage)

32. Enter VERB 36 and press the ENTR pushbutton on the DSKY.

33. Repeat steps 24 through 29.

34. Connect the input bus to the Digital Voltmeter (DVM) by setting the CROSSBAR CONTROL on the Primary Signal Selector panel to 175.

35. Adjust the G & N POWER ADJUST control on the Test Control panel until the DVM indicates an input bus voltage of 30.8 (+0.0, -0.25) vdc. Record indication.

PIPA AND IRIG TEST (High Voltage)

36. Enter VERB 36 and press the ENTR pushbutton on the DSKY.

37. Repeat steps 24 through 29.

38. Enter VERB 34 and press the ENTR pushbutton on the DSKY.

39. Connect the input bus to the Digital Voltmeter (DVM) by setting the CROSSBAR CONTROL on the Primary Signal Selector panel to 175.

40. Adjust the G & N POWER ADJUST control on the Test Control panel until the DVM indicates an input bus voltage of 28.0 (±0.5) vdc.

IMPORTANT
See below.

INTERVAL

TOOLS AND MATERIAL

IMPORTANT: Adjust Coolant Console TEMP controls as necessary to keep the GDB Temperature Meter nulled within the tolerances of step 10 of JDC 12203.

INITIALIZATION

1. Insure the OIA ON/ISS POWER DISABLED and the PROCEED portion of the PROCEED/ISS STANDBY pushbuttons on the Test Control panel are lighted.

2. Press the CGC/LGC POWER ON and the 400 CPS POWER ON pushbuttons to apply power to the CGC and provide DSKY illumination. The pushbuttons shall light.

3. Insure the STBY lamp on the DSKY is not lighted. If lighted, press the STBY pushbutton until the STBY lamp goes out. Press RSET and perform the following DSKY operations:

a. VERB 61 ENTR
b. VERB 36 ENTR

4. Press the PROCEED/ISS STANDBY pushbutton. The PROCEED lamp shall go out and the ISS STANDBY lamp shall light.

5. Insure that the PSA HTR PWR lamp on the Temperature Monitor panel is lighted.

6. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 175. Adjust the G & N VOLTAGE ADJUST until the DVM indicates 28.8 (±0.25) vdc. Record indication.

VERIFICATION WITH SIDL REQUIRED BEFORE USE

DATE 30 JUN 66

JOB OPERATE CONTROL TEST | **JDC** 12207 **REV** A **PAGE** 2 **OF** 6

SUBSYSTEM G & N SYSTEM | **ASSY**

IMU TIME DELAY

7. Set the Oscillograph Signal Selector panel to monitor the following signals:

a. Sin A_{OG} 1X CHANNEL 2 - 7
b. Sin A_{MG} 1X CHANNEL 3 - 7
c. Sin A_{IG} 1X CHANNEL 4 - 7

8. Insure that the 800~0 PH REFERENCE and CH3AC and CH4AC pushbuttons on the Oscillograph Signal Selector panel are lighted.

9. Press the CHART SPEEDS 5 pushbutton on the Oscillograph Control panel and set the Channel 2, 3, and 4 sensitivity on the Oscillograph Amplifier panel to 50 MV/MM.

10. Perform the following DSKY operations:

a. VERB 36 ENTR
b. VERB 11 NOUN 10 ENTR
c. 00012 ENTR

11. Start the Oscillograph by setting the CHART DRIVE switch to MM/SEC.

12. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 259.

13. Press the PROCEED/ISS OPERATE pushbutton on the Test Control panel and the EVENT MARKER on the Oscillograph Control panel. The NO ATT lamp on the DSKY shall light. Observe the absence of +120 vdc on the DVM for approximately 90 seconds.

14. Press the EVENT MARKER on the Oscillograph Control panel immediately after the DSKY display changes from 00030 to 40000 to 00000 and observe the voltage on the DVM indicates +120 ±6 vdc within 10 seconds. The NO ATT lamp on the DSKY shall go out.

15. Stop the Oscillograph.

16. Perform the following DSKY operations:

a. VERB 40 NOUN 20 ENTR
b. Wait 5 seconds.
c. VERB 41 NOUN 20 ENTR
d. Observe
VERB 21 NOUN 22 Flashing
e. +22500 ENTR
f. Observe
VERB 22 NOUN 22 Flashing
g. +22500 ENTR
h. Observe
VERB 23 NOUN 22 Flashing
i. +22500 ENTR
j. VERB 16 NOUN 20 ENTR
k. Observe
NO ATT lamp lights.

17. When the DSKY registers display:
Row 1 approximately +22500
Row 2 approximately +22500
Row 3 approximately +22500

The GIMBAL LOCK lamps on the DSKYs and the Monitor panel shall be lighted. Press the PROCEED/ ISS STANDBY pushbutton on the Test Control panel. The ISS STANDBY portion shall light and the PROCEED/ ISS OPERATE pushbutton shall go out.

DATE

JOB OPERATE CONTROL TEST | **JDC** 12207 **REV** A **PAGE** 3 **OF** 6

SUBSYSTEM G & N SYSTEM | **ASSY**

18. Set CHANNELS 3, 4, 5, and 6 of the Oscillograph Signal Selector panel to monitor the following signals:

a. Accel Temperature on CHANNEL 3-3 DC.
b. IRIG Temperature on CHANNEL 4-3 DC.
c. IMU Heater Discrete on CHANNEL 5 AUX.
d. IMU Blower Discrete on CHANNEL 6 AUX.

19. Insure that the CHANNEL 3 DC, CHANNEL 4 DC, CHANNEL 5 DC and CHANNEL 6 AC pushbuttons on the Oscillograph Signal Selector panel are lighted.

20. Connect a jumper from TPA #2 TB4-21 (hi) and TPA #2 TB5-22 (lo) to TPA #2 DIRECT PROBES J9 (hi) and J10 (lo) respectively.

21. Connect a jumper from PROBES OUTPUT, DIRECT to CH-5, IN-DC on the Auxiliary Input Panel.

22. Connect jumpers from TPA #2 TB4-20 (hi) and TPA #2 TB5-33 (lo) to CH 6, IN-AC on the Auxiliary Input Panel.

23. Zero and calibrate CHANNEL 3, 4, 5, and 6 on the Oscillograph Amplifier.

24. Mark the Oscillograph Channels as follows:

a. CHANNEL 3 "start of PIPA TEMP stability test"
b. CHANNEL 4 "start of IRIG TEMP stability test"
c. CHANNEL 5 "start of IMU Heater Discrete"
d. CHANNEL 6 "start of IMU Blower Discrete"

25. Set the CHART SPEEDS to 1, RANGE to 20 MV/ MM and CHART DRIVE to MM/ SEC on the Oscillograph Control for CHANNELS 3 and 4, and to 20 V/ CM for CHANNELS 5 and 6.

NOTE: Read and understand steps 26 through 49 noting that steps 39 and 40 shall be performed 15 and 30 minutes respectively after step 31.

TURN-ON CAGE TEST

26. Perform the following DSKY operations:

a. VERB 11 NOUN 10 ENTR
b. 00012 ENTR

27. Allow the PIPA and IRIG temperatures to stabilize as indicated by a voltage change of 0.05 volt or less over a one hour period on CHANNELS 3 and 4. Record the average voltage indication for the stability period of CHANNELS 3 and 4.

28. Calculate and record the difference between the PIPA and IRIG voltage indications.

DATE 30 JUN 66

JOB OPERATE CONTROL TEST | **JDC** 12207 **REV** A **PAGE** 4 **OF** 6

SUBSYSTEM G & N SYSTEM | **ASSY**

29. Start the Oscillograph by setting the CHART DRIVE switch to MM/ SEC.

30. Press the PROCEED/ ISS OPERATE pushbutton on the Test Control panel. The NO ATT lamp on the DSKY shall light.

31. Press the EVENT MARKER on the Oscillograph Control panel immediately after step 30 and record the time.

32. Verify and record by observing the PIPA Monitor Scope that no PIPA torquing is present until after the DSKY display changes from 00030 to 40000 to 00000. The NO ATT lamp shall be not lighted.

33. Press the EVENT MARKER on the Oscillograph Control panel immediately after the DSKY display changes from 00030 to 40000 to 00000.

34. After the DSKY display changes from 00030 to 40000 to 00000, perform the following DSKY operation:

a. VERB 16 NOUN 20 ENTER

35. Record the OG, MG, and IG positions as indicated on the Gimbal Position Control panel and as indicated on the DSKY displays. All axes shall indicate approximately 000.00°.

1X SIN AND COS SIGNALS

36. Set the PAVM FUNCTION selector to total and measure the following signals on the highest usable sensitivity of the meters. Record the indications:

Signal	CROSSBAR CONTROL
a. Cos A_{OG} 1X	241
b. Cos A_{MG} 1X	242
c. Cos A_{IG} 1X	243
d. Sin A_{OG} 1X	142
e. Sin A_{MG} 1X	143
f. Sin A_{IG} 1X	144

37. Perform the following DSKY operations:

a. VERB 41 NOUN 20 ENTR
b. Observe
VERB 21 NOUN 22 Flashing
c. +00000 ENTR
d. Observe
VERB 22 NOUN 22 Flashing
e. +00000 ENTR
f. Observe
VERB 23 NOUN 22 Flashing
g. +00000 ENTR
h. Observe
NO ATT lamp lights

38. Set the CROSSBAR CONTROL to 220. Adjust the G & N POWER ADJUST control until the DVM indicates 28.00 (±0.25) vdc.

STANDBY TO OPERATE TEMPERATURE TRANSIENT

39. 15 minutes after performing step 32, press the EVENT MARKER on the Oscillograph Control panel and record the time and voltage indication of CHANNEL 3.

40. 30 minutes after performing step 31, press the EVENT MARKER on the Oscillograph Control panel and record the time and voltage indicated on CHANNEL 4.

PSA THERMISTOR

41. Measure the 800 CPS P/S temperature thermistor resistance across pins

DATE 30 JUN 66

TB5-12 and TB5-13 on TPA #2. Use a 10K ohm resistor in series with one of the measuring probes. Subtract the resistance of the 10K resistor from the measured resistance. Record indication.

TEMP MON 1 THERMISTOR

42. Measure the Temp Mon 1 thermistor resistance across pins TB5-14 and TB5-15 of TPA #2. Use a 10K ohm resistor in series with one of the measuring probes. Subtract the resistance of the 10K resistor from the measured resistance. Record indication.

PIPA CAL. MOD. THERMISTOR

43. Measure the PIPA Cal. Mod. thermistor resistance across TB1-31 and TB1-27 on TPA #2. Use a 10K ohm resistor in series with one of the measuring probes. Subtract the resistance of the 10K resistor from the measured resistance. Record indication.

IMU CAGE

44. Perform the following DSKY operations:

a. VERB 40	NOUN 20	ENTR
b. Wait 5 seconds		
c. VERB 41	NOUN 20	ENTR
d. Observe		
VERB 21	NOUN 22	Flashing
e. +00200		ENTR
f. Observe		
VERB 22	NOUN 22	Flashing
g. +00200		ENTR
h. Observe		
VERB 23	NOUN 22	Flashing
i. +00200		ENTR
j. VERB 16	NOUN 20	ENTR
k. Observe		
NO ATT lamp lights		

45. When the DSKY registers display

Row 1 approximately +00200

Row 2 approximately +00200

Row 3 approximately +00200

Press and hold the IMU CAGE COMMAND pushbutton on the Test Control panel.

46. Set the PAVM FUNCTION selector to total and measure the following signals on the highest usable sensibility of the meters. Record the indications:

Signal	CROSSBAR CONTROL
a. Sin A_{OG} 1X	142
b. Sin A_{MG} 1X	143
c. Sin A_{IG} 1X	144

47. Release the IMU CAGE COMMAND pushbutton on the Test Control Panel and perform the following DSKY operations:

a. VERB 11	NOUN 10	ENTR
b. 00012		ENTR

48. Record the display of Row 1. Enter VERB 36 and press the ENTR pushbutton.

INERTIAL TEMPERATURE CONTROL POINT

49. Allow the PIPA and IRIG temperatures to stabilize as indicated by a voltage change of 0.05 volt or less over a one hour period. Stabilization should occur within 2 hours

---

since performance of step 31. Record the average voltage indication for the stability period of CHANNELS 3 and 4. Stop the Oscillograph.

50. Compare the PIPA STANDBY voltage indication from step 27 with the PIPA temperature recorded in step 49. Calculate and record the difference.

51. Compare the PIPA temperature recorded in step 39 with the PIPA temperature recorded in step 49. Calculate and record the difference.

52. Compare the IRIG temperature recorded in step 40 with the IRIG temperature recorded in step 49. Calculate and record the difference.

HEATER TELEMETRY DISCRETE

53. Record the maximum and minimum voltage indicated on CHANNEL 5.

BLOWER TELEMETRY DISCRETE

54. Record the maximum and minimum voltage indicated on CHANNEL 6.

MASTER ALARM TEST

55. Press the INTERFACE LOAD TEST pushbutton on the Test Selector panel and set the INTERFACE LOAD TEST selector to 1.

56. Press the TEST START pushbutton.

57. Observe and record that the MASTER ALARM pushbutton on the Indicator Control panel lights.

58. Press the TEST STOP and INTERFACE LOAD TEST pushbuttons on the Test Selector panel. The MASTER ALARM pushbutton shall go out. Set the INTERFACE LOAD TEST selector to OFF.

MASTER ALARM RESET TEST

59. Press the CONTINUITY TEST pushbutton on the Test Selector panel and set the CONTINUITY TEST selector to 10.

60. Set the CONDITION LAMPS switch on the Indicator Control panel to TEST.

61. Press the MASTER ALARM pushbutton. Observe and record that the pushbutton lights.

62. Press the CONTINUITY TEST pushbutton on the Test Selector panel. Set the CONTINUITY TEST selector to OFF.

NORMALIZATION

63. Perform the following DSKY operations:

a. VERB 40	NOUN 20	ENTR
b. Wait 5 seconds		
c. VERB 41	NOUN 20	ENTR
d. +00000		ENTR
e. +00000		ENTR
f. +00000		ENTR
g. Observe		
NO ATT lamp lights		

64. Observe that the Electro Luminescent lighting on the Indicator Control panel is lighted.

IMPORTANT

See below.

INTERVAL

TOOLS AND MATERIAL

IMPORTANT: Adjust Coolant Console TEMP controls as necessary to keep the GDB Temperature Meter nulled within the tolerances of step 10 of JDC 12203.

INITIALIZATION

1. Insure the OIA ON/ISS POWER DISABLED and the PROCEED portion of the PROCEED/ISS STANDBY pushbuttons on the Test Control panel are lighted.

2. Press the CGC/LGC POWER ON and the 400 CPS POWER ON pushbuttons to apply power to the CGC and provide DSKY illumination. The pushbuttons shall light.

3. Insure the STBY lamp on the DSKY is not lighted. If lighted, press the STBY pushbutton until the STBY lamp goes out. Press RSET and perform the following DSKY operations:

a. VERB 61 ENTR

b. VERB 36 ENTR

4. Press the PROCEED/ISS STANDBY pushbutton. The PROCEED lamp shall go out and the ISS STANDBY lamp shall light.

5. Insure that the PSA HTR PWR lamp on the Temperature Monitor panel is lighted.

6. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 175. Adjust the G & N VOLTAGE ADJUST until the DVM indicates 28.8 (±0.25) vdc. Record indication.

VERIFICATION WITH SIDL REQUIRED BEFORE USE

JOB OPERATE CONTROL TEST

JDC 12207 REV B PAGE 3 OF 6

SUBSYSTEM G & N SYSTEM

ASSY

18. Set CHANNELS 3, 4, 5, and 6 of the Oscillograph Signal Selector panel to monitor the following signals:

a. Accel Temperature on CHANNEL 3-3 DC.

b. IRIG Temperature on CHANNEL 4-3 DC.

c. IMU Heater Discrete on CHANNEL 5 AUX.

d. IMU Blower Discrete on CHANNEL 6 AUX.

19. Insure that the CHANNEL 3 DC, CHANNEL 4 DC, CHANNEL 5 DC and CHANNEL 6 AC pushbuttons on the Oscillograph Signal Selector panel are lighted.

20. Connect a jumper from TPA #2 TB4-21 (hi) and TPA #2 TB5-22 (lo) to TPA #2 DIRECT PROBES J9 (hi) and J10 (lo) respectively.

21. Connect a jumper from PROBES OUTPUT, DIRECT to CH-5, IN-DC on the Auxiliary Input Panel.

22. Connect jumpers from TPA #2 TB4-20 (hi) and TPA #2 TB5-33 (lo) to CH 6, IN-AC on the Auxiliary Input Panel.

23. Zero and calibrate CHANNEL 3, 4, and 5 on the Oscillograph Amplifier. CHANNEL 6 may be calibrated after step 35.

24. Mark the Oscillograph Channels as follows:

a. CHANNEL 3 "start of PIPA TEMP stability test"

b. CHANNEL 4 "start of IRIG TEMP stability test"

c. CHANNEL 5 "start of IMU Heater Discrete"

d. CHANNEL 6 "start of IMU Blower Discrete"

25. Set the CHART SPEEDS to 1, RANGE to 20 MV/ MM and CHART DRIVE to MM/ SEC on the Oscillograph Control for CHANNELS 3 and 4, and to 20 V/ CM for CHANNELS 5 and 6.

NOTE: Read and understand steps 26 through 49 noting that steps 39 and 40 shall be performed 15 and 30 minutes respectively after step 31.

TURN-ON CAGE TEST

26. Perform the following DSKY operations:

a. VERB 11 NOUN 10 ENTR

b. 00012 ENTR

27. Allow the PIPA and IRIG temperatures to stabilize as indicated by a voltage change of 0.05 volt or less over a one hour period on CHANNELS 3 and 4. Record the average voltage indication for the stability period of CHANNELS 3 and 4.

28. Calculate and record the difference between the PIPA and IRIG voltage indications.

DATE 30 JUN 66

JOB OPERATE CONTROL TEST

SUBSYSTEM G & N SYSTEM

ASSY

29. Start the Oscillograph by setting the CHART DRIVE switch to MM/ SEC.

30. Press the PROCEED/ ISS OPERATE pushbutton on the Test Control panel. The NO ATT lamp on the DSKY shall light.

31. Press the EVENT MARKER on the Oscillograph Control panel immediately after step 30 and record the time.

32. Verify and record by observing the PIPA Monitor Scope that no PIPA torquing is present until after the DSKY display changes from 00030 to 40000 to 00000. The NO ATT lamp shall be not lighted.

33. Press the EVENT MARKER on the Oscillograph Control panel immediately after the DSKY display changes from 00030 to 40000 to 00000.

34. After the DSKY display changes from 00030 to 40000 to 00000, perform the following DSKY operation:

a. VERB 16 NOUN 20 ENTER

35. Record the OG, MG, and IG positions as indicated on the Gimbal Position Control panel and as indicated on the DSKY displays. All axes shall indicate approximately 000.00°.

1X SIN AND COS SIGNALS

36. Perform the following DSKY operations:

a. VERB 41 NOUN 20 ENTR

b. +00000 ENTR

c. +00000 ENTR

d. +00000 ENTR

Set the PAVM FUNCTION selector to total and measure the following signals on the highest usable sensitivity of the meters. Record the indications:

Signal	CROSSBAR CONTROL
a. Cos A_{OG} 1X	241
b. Cos A_{MG} 1X	242
c. Cos A_{IG} 1X	243
d. Sin A_{OG} 1X	142
e. Sin A_{MG} 1X	143
f. Sin A_{IG} 1X	144

37. Perform the following DSKY operations:

a. VERB 41 NOUN 20 ENTR

b. Observe

VERB 21 NOUN 22 Flashing

c. +00000 ENTR

d. Observe

VERB 22 NOUN 22 Flashing

e. +00000 ENTR

f. Observe

VERB 23 NOUN 22 Flashing

g. +00000 ENTR

h. Observe

NO ATT lamp lights

38. Set the CROSSBAR CONTROL to 220. Adjust the G & N POWER ADJUST control until the DVM indicates 28.00 (±0.25) vdc.

STANDBY TO OPERATE TEMPERATURE TRANSIENT

39. 15 minutes after performing step 32, press the EVENT MARKER on the Oscillograph Control panel and record the time and voltage indication of CHANNEL 3.

40. 30 minutes after performing step 31, press the EVENT MARKER on the Oscillograph Control panel and record the time and voltage indicated on CHANNEL 4.

PSA THERMISTOR

41. Measure the 800 CPS P/S temperature thermistor resistance across pins

DATE 30 JUN 66

TB5-12 and TB5-13 on TPA #2. Use a 10K ohm resistor in series with one of the measuring probes. Subtract the resistance of the 10K resistor from the measured resistance. Record indication.

TEMP MON 1 THERMISTOR

42. Measure the Temp Mon 1 thermistor resistance across pins TB5-14 and TB5-15 of TPA #2. Use a 10K ohm resistor in series with one of the measuring probes. Subtract the resistance of the 10K resistor from the measured resistance. Record indication.

PIPA CAL. MOD. THERMISTOR

43. Measure the PIPA Cal. Mod. thermistor resistance across TB1-31 and TB1-27 on TPA #2. Use a 10K ohm resistor in series with one of the measuring probes. Subtract the resistance of the 10K resistor from the measured resistance. Record indication.

IMU CAGE

44. Perform the following DSKY operations:

a. VERB 40 NOUN 20 ENTR
b. Wait 5 seconds
c. VERB 41 NOUN 20 ENTR
d. Observe
VERB 21 NOUN 22 Flashing
e. +00200 ENTR
f. Observe
VERB 22 NOUN 22 Flashing

k. Observe
NO ATT lamp lights

45. When the DSKY registers display

Row 1 approximately +00200
Row 2 approximately +00200
Row 3 approximately +00200

Press and hold the IMU CAGE COMMAND pushbutton on the Test Control panel.

46. Set the PAVM FUNCTION selector to total and measure the following signals on the highest usable sensibility of the meters. Record the indications:

Signal	CROSSBAR CONTROL
a. Sin A_{OG} 1X	142
b. Sin A_{MG} 1X	143
c. Sin A_{IG} 1X	144

47. Release the IMU CAGE COMMAND pushbutton on the Test Control Panel and perform the following DSKY operations:

a. VERB 11 NOUN 10 ENTR
b. 00012 ENTR

48. Record the display of Row 1. Enter VERB 36 and press the ENTR pushbutton.

INERTIAL TEMPERATURE CONTROL POINT

49. Allow the PIPA and IRIG temperatures to stabilize as indicated by a voltage change of 0.05 volt or less over a one hour period. Stabilization should occur within 2 hours

---

since performance of step 31. Record the average voltage indication for the stability period of CHANNELS 3 and 4. Stop the Oscillograph.

50. Compare the PIPA STANDBY voltage indication from step 27 with the PIPA temperature recorded in step 49. Calculate and record the difference.

51. Compare the PIPA temperature recorded in step 39 with the PIPA temperature recorded in step 49. Calculate and record the difference.

52. Compare the IRIG temperature recorded in step 40 with the IRIG temperature recorded in step 49. Calculate and record the difference.

HEATER TELEMETRY DISCRETE

53. Record the maximum and minimum voltage indicated on CHANNEL 5.

BLOWER TELEMETRY DISCRETE

54. Record the maximum and/or minimum voltage indicated on CHANNEL 6 or both if the blower is cycling.

MASTER ALARM TEST

55. Press the INTERFACE LOAD TEST pushbutton on the Test Selector panel and set the INTERFACE LOAD TEST selector to 1.

56. Press the TEST START pushbutton.

57. Observe and record that the MASTER ALARM pushbutton on the Indicator Control panel lights.

58. Press the TEST STOP and INTERFACE LOAD TEST pushbuttons on the Test Selector panel. The MASTER ALARM pushbutton shall go out. Set the INTERFACE LOAD TEST selector to OFF.

MASTER ALARM RESET TEST

59. Press the CONTINUITY TEST pushbutton on the Test Selector panel and set the CONTINUITY TEST selector to 10.

60. Set the CONDITION LAMPS switch on the Indicator Control panel to TEST.

61. Press the MASTER ALARM pushbutton. Observe and record that the pushbutton lights.

62. Press the CONTINUITY TEST pushbutton on the Test Selector panel. Set the CONTINUITY TEST selector to OFF.

NORMALIZATION

63. Perform the following DSKY operations:

a. VERB 40 NOUN 20 ENTR
b. Wait 5 seconds
c. VERB 41 NOUN 20 ENTR
d. +00000 ENTR
e. +00000 ENTR
f. +00000 ENTR
g. Observe
NO ATT lamp lights

64. Observe that the Electro Luminescent lighting on the Indicator Control panel is lighted.

Set the PAVM FUNCTION selector to total and measure the following signals on the highest usable sensitivity of the meters. Record the indications:

	Signal	CROSSBAR CONTROL
a.	Cos A_{OG} 1X	241
b.	Cos A_{MG} 1X	242
c.	Cos A_{IG} 1X	243
d.	Sin A_{OG} 1X	142
e.	Sin A_{MG} 1X	143
f.	Sin A_{IG} 1X	144

37. Perform the following DSKY operations:

a. VERB 41 NOUN 20 ENTR
b. Observe
VERB 21 NOUN 22 Flashing
c. +00000 ENTR
d. Observe
VERB 22 NOUN 22 Flashing
e. +00000 ENTR
f. Observe
VERB 23 NOUN 22 Flashing
g. +00000 ENTR
h. Observe
NO ATT lamp lights

38. Set the CROSSBAR CONTROL to 220. Adjust the G & N POWER ADJUST control until the DVM indicates 28.00 (±0.25) vdc.

STANDBY TO OPERATE TEMPERATURE TRANSIENT

39. 15 minutes after performing step 32, press the EVENT MARKER on the Oscillograph Control panel and record the time and voltage indication of CHANNEL 3.

40. 30 minutes after performing step 31, press the EVENT MARKER on the Oscillograph Control panel and record the time and voltage indicated on CHANNEL 4.

PSA THERMISTOR

41. Measure the 800 CPS P/S temperature thermistor resistance across pins

DATE 30 JUN 66

SUBSYSTEM G & N SYSTEM | ASSY

TB5-12 and TB5-13 on TPA #2. Use a 10K ohm resistor in series with one of the measuring probes. Subtract the resistance of the 10K resistor from the measured resistance. Record indication.

TEMP MON 1 THERMISTOR

42. Measure the Temp Mon 1 thermistor resistance across pins TB5-14 and TB5-15 of TPA #2. Use a 10K ohm resistor in series with one of the measuring probes. Subtract the resistance of the 10K resistor from the measured resistance. Record indication.

PIPA CAL. MOD. THERMISTOR

43. Measure the PIPA Cal. Mod. thermistor resistance across TB1-31 and TB1-27 on TPA #2. Use a 10K ohm resistor in series with one of the measuring probes. Subtract the resistance of the 10K resistor from the measured resistance. Record indication.

IMU CAGE

44. Perform the following DSKY operations:

a. VERB 40 NOUN 20 ENTR
b. Wait 5 seconds
c. VERB 41 NOUN 20 ENTR
d. Observe
VERB 21 NOUN 22 Flashing
e. +00200 ENTR
f. Observe
VERB 22 NOUN 22 Flashing
g. +00200 ENTR
h. Observe
VERB 23 NOUN 22 Flashing
i. +00200 ENTR
j. VERB 16 NOUN 20 ENTR
k. Observe
NO ATT lamp lights

45. When the DSKY registers display

Row 1 approximately +00200
Row 2 approximately +00200
Row 3 approximately +00200

Press and hold the IMU CAGE COMMAND pushbutton on the Test Control panel.

46. Set the PAVM FUNCTION selector to total and measure the following signals on the highest usable sensibility of the meters. Record the indications:

Signal	CROSSBAR CONTROL
a. Sin A_{OG} 1X	142
b. Sin A_{MG} 1X	143
c. Sin A_{IG} 1X	144

47. Release the IMU CAGE COMMAND pushbutton on the Test Control Panel and perform the following DSKY operations:

a. VERB 11 NOUN 10 ENTR
b. 00012 ENTR

48. Record the display of Row 1. Enter VERB 36 and press the ENTR pushbutton.

INERTIAL TEMPERATURE CONTROL POINT

49. Allow the PIPA and IRIG temperatures to stabilize as indicated by a voltage change of 0.05 volt or less over a one hour period. Stabilization should occur within 2 hours

---

SUBSYSTEM G & N SYSTEM | ASSY

since performance of step 31. Record the average voltage indication for the stability period of CHANNELS 3 and 4. Stop the Oscillograph.

50. Compare the PIPA STANDBY voltage indication from step 27 with the PIPA temperature recorded in step 49. Calculate and record the difference.

51. Compare the PIPA temperature recorded in step 39 with the PIPA temperature recorded in step 49. Calculate and record the difference.

52. Compare the IRIG temperature recorded in step 40 with the IRIG temperature recorded in step 49. Calculate and record the difference.

HEATER TELEMETRY DISCRETE

53. Record the maximum and minimum voltage indicated on CHANNEL 5.

BLOWER TELEMETRY DISCRETE

54. Record the maximum and/or minimum voltage indicated on CHANNEL 6 or both if the blower is cycling.

MASTER ALARM TEST

55. Press the INTERFACE LOAD TEST pushbutton on the Test Selector panel and set the INTERFACE LOAD TEST selector to 1.

56. Press the TEST START pushbutton.

57. Observe and record that the MASTER ALARM pushbutton on the Indicator Control panel lights.

58. Press the TEST STOP and INTERFACE LOAD TEST pushbuttons on the Test Selector panel. The MASTER ALARM pushbutton shall go out. Set the INTERFACE LOAD TEST selector to OFF.

MASTER ALARM RESET TEST

59. Press the CONTINUITY TEST pushbutton on the Test Selector panel and set the CONTINUITY TEST selector to 10.

60. Set the CONDITION LAMPS switch on the Indicator Control panel to TEST.

61. Press the MASTER ALARM pushbutton. Observe and record that the pushbutton lights.

62. Press the CONTINUITY TEST pushbutton on the Test Selector panel. Set the CONTINUITY TEST selector to OFF.

NORMALIZATION

63. Perform the following DSKY operations:

a. VERB 40 NOUN 20 ENTR
b. Wait 5 seconds
c. VERB 41 NOUN 20 ENTR
d. +00000 ENTR
e. +00000 ENTR
f. +00000 ENTR
g. Observe
NO ATT lamp lights

64. Observe that the Electro Luminescent lighting on the Indicator Control panel is lighted.

IMPORTANT
See below.

INTERVAL

TOOLS AND MATERIAL

IMPORTANT: Adjust Coolant Console TEMP controls as necessary to keep the GDB Temperature Meter nulled within the tolerances of step 10 of JDC 12203.

INITIALIZATION

1. Insure the OIA ON/ISS POWER DISABLED and the PROCEED portion of the PROCEED/ISS STANDBY pushbuttons on the Test Control panel are lighted.

2. Press the CGC/LGC POWER ON and the 400 CPS POWER ON pushbuttons to apply power to the CGC and provide DSKY illumination. The pushbuttons shall light.

3. Insure the STBY lamp on the DSKY is not lighted. If lighted, press the STBY pushbutton until the STBY lamp goes out. Press RSET and perform the following DSKY operations:

a. VERB 61 ENTR
b. VERB 36 ENTR

4. Press the PROCEED/ISS STANDBY pushbutton. The PROCEED lamp shall go out and the ISS STANDBY lamp shall light.

5. Insure that the PSA HTR PWR lamp on the Temperature Monitor panel is lighted.

6. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 175. Adjust the G & N VOLTAGE ADJUST until the DVM indicates 28.8 (±0.25) vdc. Record indication.

VERIFICATION WITH SIDL REQUIRED BEFORE USE

DATE 30 JUN 66

JOB OPERATE CONTROL TEST | **JDC** 12207 **REV** D **PAGE** 2 **OF** 7

SUBSYSTEM G & N SYSTEM | **ASSY**

IMU TIME DELAY

7. Deleted.

8. Deleted.

9. Deleted.

10. Perform the following DSKY operations:

a. VERB 36 ENTR
b. VERB 11 NOUN 10 ENTR
c. 00012 ENTR

11. Set switches and controls on the Counter as follows:

DISPLAY RESET to ZERO
CLOCK FREQUENCY DIVIDER to 10^4
CLOCK SELECTOR to INT
INPUT SELECTOR to C SENSE
SENSE SELECTOR to FWD
FUNCTION to COUNT

12. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 259.

13. Simultaneously press the RESET pushbutton on the Counter and the PROCEED/ISS OPERATE pushbutton on the Test Control panel. The NO ATT lamp on the DSKY shall light. Observe the absence of +120 vdc on the DVM.

14. Set the FUNCTION selector on the Counter to OFF immediately after the DSKY display changes from 00030 to 40000 and observe the voltage on the DVM indicates +120 vdc within 10 seconds. The NO ATT lamp on the DSKY shall go out.

15. Record the time displayed on the Counter.

16. Perform the following DSKY operations:

a. VERB 40 NOUN 20 ENTR
b. Wait 5 seconds.
c. VERB 41 NOUN 20 ENTR
d. Observe
VERB 21 NOUN 22 Flashing
e. +22500 ENTR
f. Observe
VERB 22 NOUN 22 Flashing
g. +22500 ENTR
h. Observe
VERB 23 NOUN 22 Flashing
i. +22500 ENTR
j. Observe
NO ATT lamp lights

The GIMBAL LOCK lamps on the DSKY and the Monitor panel shall light. Press the PROCEED/ISS STANDBY pushbutton on the Test Control panel. The ISS STANDBY portion shall light and the PROCEED/ISS OPERATE pushbutton shall go out.

17. Perform the following DSKY operations:

a. VERB 06 NOUN 20 ENTR
b. Observe the DSKY registers display
Row 1 approximately +22500
Row 2 approximately +22500
Row 3 approximately +22500

DATE 30 JUN 66

JOB OPERATE CONTROL TEST | **JDC** 12207 **REV** D **PAGE** 3 **OF** 7

SUBSYSTEM G & N SYSTEM | **ASSY**

18. Set CHANNELS 3, 4, 5, and 6 of the Oscillograph Signal Selector panel to monitor the following signals:

a. Accel Temperature on CHANNEL 3-3 DC.
b. IRIG Temperature on CHANNEL 4-3 DC.
c. IMU Heater Discrete on CHANNEL 5 AUX.
d. IMU Blower Discrete on CHANNEL 6 AUX.

19. Insure that the CHANNEL 3 DC, CHANNEL 4 DC, CHANNEL 5 DC and CHANNEL 6 AC pushbuttons on the Oscillograph Signal Selector panel are lighted.

20. Connect a jumper from TPA #2 TB4-21 (hi) and TPA #2 TB5-22 (lo) to TPA #2 DIRECT PROBES J9 (hi) and J10 (lo) respectively.

21. Connect a jumper from PROBES OUTPUT, DIRECT to CH-5, IN-DC on the Auxiliary Input Panel.

22. Connect jumpers from TPA #2 TB4-20 (hi) and TPA #2 TB5-33 (lo) to CH 6, IN-AC on the Auxiliary Input Panel.

23. Zero and calibrate CHANNEL 3, 4, and 5 on the Oscillograph Amplifier. CHANNEL 6 may be calibrated after step 35.

24. Mark the Oscillograph Channels as follows:

a. CHANNEL 3 "start of PIPA TEMP stability test"
b. CHANNEL 4 "start of IRIG TEMP stability test"
c. CHANNEL 5 "start of IMU Heater Discrete"
d. CHANNEL 6 "start of IMU Blower Discrete"

25. Set the CHART SPEEDS to 1, RANGE to 20 MV/MM and CHART DRIVE to MM/SEC on the Oscillograph Control for CHANNELS 3 and 4, and to 20 V/CM for CHANNELS 5 and 6.

NOTE: Read and understand steps 26 through 49 noting that steps 39 and 40 shall be performed 15 and 30 minutes respectively after step 31.

TURN-ON CAGE TEST

26. Perform the following DSKY operations:

a. VERB 11 NOUN 10 ENTR
b. 00012 ENTR

27. Allow the PIPA and IRIG temperatures to stabilize as indicated by a voltage change of 0.05 volt or less over a one hour period on CHANNELS 3 and 4. Stop the Oscillograph. Record the average voltage indication for the stability period of CHANNELS 3 and 4.

28. Calculate and record the difference between the PIPA and IRIG voltage indications.

DATE 30 JUN 66

JOB OPERATE CONTROL TEST | **JDC** 12207 **REV** D **PAGE** 4 **OF** 7

SUBSYSTEM G & N SYSTEM | **ASSY**

29. Start the Oscillograph by setting the CHART DRIVE switch to MM/SEC.

30. Press the PROCEED/ISS OPERATE pushbutton on the Test Control panel. The NO ATT lamp on the DSKY shall light.

31. Press the EVENT MARKER on the Oscillograph Control panel immediately after step 30 and record the time.

32. Verify and record by observing the PIPA Monitor Scope that no PIPA torquing is present until after the DSKY display changes from 00030 to 40000 to 00000. The NO ATT lamp shall be not lighted.

33. Press the EVENT MARKER on the Oscillograph Control panel immediately after the DSKY display changes from 00030 to 40000 to 00000.

34. After the DSKY display changes from 00030 to 40000 to 00000, perform the following DSKY operation:

a. VERB 16 NOUN 20 ENTER

35. Record the OG, MG, and IG positions as indicated on the Gimbal Position Control panel and as indicated on the DSKY displays. All axes shall indicate approximately 000.00°.

1X SIN AND COS SIGNALS

36. Perform the following DSKY operations:

a. VERB 40 NOUN 20 ENTR
b. Wait 5 seconds.
c. VERB 41 NOUN 20 ENTR
d. Observe
VERB 21 NOUN 22 Flashing
e. +00000 ENTR
f. Observe
VERB 22 NOUN 22 Flashing
g. +00000 ENTR
h. Observe
VERB 23 NOUN 22 Flashing
i. +00000 ENTR
j. Observe
NO ATT lamp lights.

37. Set the PAVM FUNCTION selector to TOTAL and measure the following signals on the highest usable sensitivity of the meters. Record indications:

Signal	CROSSBAR CONTROL
a. Cos A_{OG} 1X	241
b. Cos A_{MG} 1X	242
c. Cos A_{IG} 1X	243
d. Sin A_{OG} 1X	142
e. Sin A_{MG} 1X	143
f. Sin A_{IG} 1X	144

38. Set the CROSSBAR CONTROL to 220. Adjust the G & N POWER ADJUST control until the DVM indicates 28.00 (±0.25) vdc.

STANDBY TO OPERATE TEMPERATURE TRANSIENT

39. 15 minutes after performing step 32, press the EVENT MARKER on the Oscillograph Control panel and record the time and voltage indication of CHANNEL 3.

40. 30 minutes after performing step 31, press the EVENT MARKER on the Oscillograph Control panel and record the time and voltage indicated on CHANNEL 4.

PSA THERMISTOR

41. Measure the 800 CPS P/S temperature thermistor resistance across pins

DATE 30 JUN 66

TB5-12 and TB5-13 on TPA #2. Use a 10K ohm resistor in series with one of the measuring probes. Subtract the resistance of the 10K resistor from the measured resistance. Record indication.

TEMP MON 1 THERMISTOR

42. Measure the Temp Mon 1 thermistor resistance across pins TB5-14 and TB5-15 of TPA #2. Use a 10K ohm resistor in series with one of the measuring probes. Subtract the resistance of the 10K resistor from the measured resistance. Record indication.

PIPA CAL. MOD. THERMISTOR

43. Measure the PIPA Cal. Mod. thermistor resistance across TB1-31 and TB1-27 on TPA #2. Use a 10K ohm resistor in series with one of the measuring probes. Subtract the resistance of the 10K resistor from the measured resistance. Record indication.

IMU CAGE

44. Perform the following DSKY operations:

a. VERB 40 NOUN 20 ENTR
b. Wait 5 seconds
c. VERB 41 NOUN 20 ENTR
d. Observe
VERB 21 NOUN 22 Flashing
e. +00200 ENTR
f. Observe
VERB 22 NOUN 22 Flashing
g. +00200 ENTR
h. Observe
VERB 23 NOUN 22 Flashing
i. +00200 ENTR
j. VERB 16 NOUN 20 ENTR
k. Observe
NO ATT lamp lights

45. When the DSKY registers display
Row 1 approximately +00200
Row 2 approximately +00200
Row 3 approximately +00200

Enter VERB 34 into the DSKY and press the ENTR pushbutton. Press and hold the IMU CAGE COMMAND pushbutton on the Test Control Panel.

46. Set the PAVM FUNCTION selector to TOTAL and measure the following signals on the highest usable sensitivity of the meters. Record the indications:

Signal	CROSSBAR CONTROL
a. Sin A_{OG} 1X	142
b. Sin A_{MG} 1X	143
c. Sin A_{IG} 1X	144

47. Release the IMU CAGE COMMAND pushbutton on the Test Control Panel and perform the following DSKY operations:

a. VERB 01 NOUN 10 ENTR
b. 00012 ENTR

48. Record the display of Row 1. Enter VERB 36 and press the ENTR pushbutton.

INERTIAL TEMPERATURE CONTROL POINT

48A. Perform the following DSKY operations:

a. VERB 40 NOUN 20 ENTR
b. Wait 5 seconds.
c. VERB 41 NOUN 20 ENTR
d. Observe
VERB 21 NOUN 22 Flashing
e. +00000 ENTR
f. Observe
VERB 22 NOUN 22 Flashing
g. +00000 ENTR
h. Observe
VERB 23 NOUN 22 Flashing
i. +00000 ENTR
j. Observe
NO ATT lamp lights.

49. Allow the PIPA and IRIG temperatures to stabilize as indicated by a voltage change of 0.05 volt or less over a one hour period. Stabilization should occur within 2 hours since performance of step 31. Record the average voltage indication for the stability period of CHANNELS 3 and 4. Stop the Oscillograph.

50. Compare the PIPA STANDBY voltage indication from step 27 with the PIPA temperature recorded in step 49. Calculate and record the difference.

51. Compare the PIPA temperature recorded in step 39 with the PIPA temperature recorded in step 49. Calculate and record the difference.

52. Compare the IRIG temperature recorded in step 40 with the IRIG temperature recorded in step 49. Calculate and record the difference.

HEATER TELEMETRY DISCRETE

53. Record the maximum and minimum voltage indicated on CHANNEL 5.

BLOWER TELEMETRY DISCRETE

54. Record the maximum and/or minimum voltage indicated on CHANNEL 6 or both if the blower is cycling.

MASTER ALARM TEST

55. Press the INTERFACE LOAD TEST pushbutton on the Test Selector panel and set the INTERFACE LOAD TEST selector to 1.

56. Press the TEST START pushbutton.

57. Observe and record that the MASTER ALARM pushbutton on the Indicator Control panel lights.

58. Press the TEST STOP and INTERFACE LOAD TEST pushbuttons on the Test Selector panel. The MASTER ALARM pushbutton shall go out. Set the INTERFACE LOAD TEST selector to OFF.

MASTER ALARM RESET TEST

59. Press the CONTINUITY TEST pushbutton on the Test Selector panel and set the CONTINUITY TEST selector to 10.

60. Set the CONDITION LAMPS switch on the Indicator Control panel to TEST.

61. Press the MASTER ALARM pushbutton. Observe and record that the pushbutton lights.

---

62. Press the CONTINUITY TEST pushbutton on the Test Selector panel. Set the CONTINUITY TEST selector to OFF.

63. Observe and record that the electroluminescent lighting on the Indicator Control panel is lighted.

64. Perform the following DSKY operations:

IMPORTANT See below.

INTERVAL

TOOLS AND MATERIAL

IMPORTANT: Adjust Coolant Console TEMP controls as necessary to keep the GDB Temperature Meter nulled within the tolerances of step 10 of JDC 12203.

INITIALIZATION

1. Insure the OIA ON/ISS POWER DISABLED and the PROCEED portion of the PROCEED/ISS STANDBY pushbuttons on the Test Control panel are lighted.

2. Press the CGC/LGC POWER ON and the 400 CPS POWER ON pushbuttons to apply power to the CGC and provide DSKY illumination. The pushbuttons shall light.

3. Insure the STBY lamp on the DSKY is not lighted. If lighted, press the STBY pushbutton until the STBY lamp goes out. Press RSET and perform the following DSKY operations:

a. VERB 61 ENTR

b. VERB 36 ENTR

c. Press ALARM RESET pushbutton on Programmer and Monitor panel of CTS.

4. Press the PROCEED/ISS STANDBY pushbutton. The PROCEED lamp shall go out and the ISS STANDBY lamp shall light.

5. Insure that the PSA HTR PWR lamp on the Temperature Monitor panel is lighted.

6. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 175. Adjust the G & N VOLTAGE ADJUST until the DVM indicates 28.8 (±0.25) vdc. Record indication.

JOB OPERATE CONTROL TEST

JDC 12207 REV E PAGE 3 OF 7

SUBSYSTEM G & N SYSTEM

ASSY

18. Set CHANNELS 3, 4, 5, and 6 of the Oscillograph Signal Selector panel to monitor the following signals:

a. Accel Temperature on CHANNEL 3-3 DC.

b. IRIG Temperature on CHANNEL 4-3 DC.

c. IMU Heater Discrete on CHANNEL 5 AUX.

d. IMU Blower Discrete on CHANNEL 6 AUX.

19. Insure that the CHANNEL 3 DC, CHANNEL 4 DC, CHANNEL 5 DC and CHANNEL 6 AC pushbuttons on the Oscillograph Signal Selector panel are lighted.

20. Connect a jumper from TPA #2 TB4-21 (hi) and TPA #2 TB5-22 (lo) to TPA #2 DIRECT PROBES J9 (hi) and J10 (lo) respectively.

21. Connect a jumper from PROBES OUTPUT, DIRECT to CH-5, IN-DC on the Auxiliary Input Panel.

22. Connect jumpers from TPA #2 TB4-20 (hi) and TPA #2 TB5-33 (lo) to CH 6, IN-AC on the Auxiliary Input Panel.

23. Zero and calibrate CHANNEL 3, 4, and 5 on the Oscillograph Amplifier. CHANNEL 6 may be calibrated after step 35.

24. Mark the Oscillograph Channels as follows:

a. CHANNEL 3 "start of PIPA TEMP stability test"

b. CHANNEL 4 "start of IRIG TEMP stability test"

c. CHANNEL 5 "start of IMU Heater Discrete"

d. CHANNEL 6 "start of IMU Blower Discrete"

25. Set the CHART SPEEDS to 1, RANGE to 20 MV/MM and CHART DRIVE to MM/SEC on the Oscillograph Control for CHANNELS 3 and 4, and to 20 V/CM for CHANNELS 5 and 6.

NOTE: Read and understand steps 26 through 49 noting that steps 39 and 40 shall be performed 15 and 30 minutes respectively after step 31.

TURN-ON CAGE TEST

26. Perform the following DSKY operations:

a. VERB 11 NOUN 10 ENTR

b. 00012 ENTR

27. Allow the PIPA and IRIG temperatures to stabilize as indicated by a voltage change of 0.05 volt or less over a one hour period on CHANNELS 3 and 4. Stop the Oscillograph. Record the average voltage indication for the stability period of CHANNELS 3 and 4.

28. Calculate and record the difference between the PIPA and IRIG voltage indications.

DATE 30 JUN 66

JOB OPERATE CONTROL TEST

SUBSYSTEM G & N SYSTEM

ASSY

29. Start the Oscillograph by setting the CHART DRIVE switch to MM/SEC.

30. Press the PROCEED/ISS OPERATE pushbutton on the Test Control panel. The NO ATT lamp on the DSKY shall light.

31. Press the EVENT MARKER on the Oscillograph Control panel immediately after step 30 and record the time.

32. Verify and record by observing the PIPA Monitor Scope that no PIPA torquing is present until after the DSKY display changes from 00030 to 40000 to 00000. The NO ATT lamp shall be not lighted.

33. Press the EVENT MARKER on the Oscillograph Control panel immediately after the DSKY display changes from 00030 to 40000 to 00000.

34. After the DSKY display changes from 00030 to 40000 to 00000, perform the following DSKY operation:

a. VERB 16 NOUN 20 ENTER

35. Record the OG, MG, and IG positions as indicated on the Gimbal Position Control panel and as indicated on the DSKY displays. All axes shall indicate approximately 000.00°.

1X SIN AND COS SIGNALS

36. Perform the following DSKY operations:

a. VERB 40 NOUN 20 ENTR

b. Wait 5 seconds.

c. VERB 41 NOUN 20 ENTR

d. Observe

VERB 21 NOUN 22 Flashing

e. +00000 ENTR

f. Observe

VERB 22 NOUN 22 Flashing

g. +00000 ENTR

h. Observe

VERB 23 NOUN 22 Flashing

i. +00000 ENTR

j. Observe

NO ATT lamp lights.

37. Set the PAVM FUNCTION selector to TOTAL and measure the following signals on the highest usable sensitivity of the meters. Record indications:

Signal	CROSSBAR CONTROL
a. Cos A_{OG} 1X	241
b. Cos A_{MG} 1X	242
c. Cos A_{IG} 1X	243
d. Sin A_{OG} 1X	142
e. Sin A_{MG} 1X	143
f. Sin A_{IG} 1X	144

38. Set the CROSSBAR CONTROL to 220. Adjust the G & N POWER ADJUST control until the DVM indicates 28.00 (±0.25) vdc.

STANDBY TO OPERATE TEMPERATURE TRANSIENT

39. 15 minutes after performing step 32, press the EVENT MARKER on the Oscillograph Control panel and record the time and voltage indication of CHANNEL 3.

40. 30 minutes after performing step 31, press the EVENT MARKER on the Oscillograph Control panel and record the time and voltage indicated on CHANNEL 4.

PSA THERMISTOR

41. Measure the 800 CPS P/S temperature thermistor resistance across pins

DATE 30 JUN 66

TB5-12 and TB5-13 on TPA #2. Use a 10K ohm resistor in series with one of the measuring probes. Subtract the resistance of the 10K resistor from the measured resistance. Record indication.

TEMP MON 1 THERMISTOR

42. Measure the Temp Mon 1 thermistor resistance across pins TB5-14 and TB5-15 of TPA #2. Use a 10K ohm resistor in series with one of the measuring probes. Subtract the resistance of the 10K resistor from the measured resistance. Record indication.

PIPA CAL. MOD. THERMISTOR

43. Measure the PIPA Cal. Mod. thermistor resistance across TB1-31 and TB1-27 on TPA #2. Use a 10K ohm resistor in series with one of the measuring probes. Subtract the resistance of the 10K resistor from the measured resistance. Record indication.

IMU CAGE

44. Perform the following DSKY operations:

a. VERB 40 NOUN 20 ENTR
b. Wait 5 seconds
c. VERB 41 NOUN 20 ENTR
d. Observe
VERB 21 NOUN 22 Flashing
e. +00200 ENTR
f. Observe
VERB 22 NOUN 22 Flashing
g. +00200 ENTR
h. Observe
VERB 23 NOUN 22 Flashing
i. +00200 ENTR
j. VERB 16 NOUN 20 ENTR
k. Observe
NO ATT lamp lights

45. When the DSKY registers display

Row 1 approximately +00200
Row 2 approximately +00200
Row 3 approximately +00200

Enter VERB 34 into the DSKY and press the ENTR pushbutton. Press and hold the IMU CAGE COMMAND pushbutton on the Test Control Panel.

46. Set the PAVM FUNCTION selector to TOTAL and measure the following signals on the highest usable sensitivity of the meters. Record the indications:

	Signal	CROSSBAR CONTROL
a.	Sin A_{OG} 1X	142
b.	Sin A_{MG} 1X	143
c.	Sin A_{IG} 1X	144

47. Release the IMU CAGE COMMAND pushbutton on the Test Control Panel and perform the following DSKY operations:

a. VERB 01 NOUN 10 ENTR
b. 00012 ENTR

48. Record the display of Row 1. Enter VERB 36 and press the ENTR pushbutton.

INERTIAL TEMPERATURE CONTROL POINT

48A. Perform the following DSKY operations:

a. VERB 40 NOUN 20 ENTR
b. Wait 5 seconds.
c. VERB 41 NOUN 20 ENTR
d. Observe
VERB 21 NOUN 22 Flashing
e. +00000 ENTR
f. Observe
VERB 22 NOUN 22 Flashing
g. +00000 ENTR
h. Observe
VERB 23 NOUN 22 Flashing
i. +00000 ENTR
j. Observe
NO ATT lamp lights.

49. Allow the PIPA and IRIG temperatures to stabilize as indicated by a voltage change of 0.05 volt or less over a one hour period. Stabilization should occur within 2 hours since performance of step 31. Record the average voltage indication for the stability period of CHANNELS 3 and 4. Stop the Oscillograph.

50. Compare the PIPA STANDBY voltage indication from step 27 with the PIPA temperature recorded in step 49. Calculate and record the difference.

51. Compare the PIPA temperature recorded in step 39 with the PIPA temperature recorded in step 49. Calculate and record the difference.

52. Compare the IRIG temperature recorded in step 40 with the IRIG temperature recorded in step 49. Calculate and record the difference.

HEATER TELEMETRY DISCRETE

53. Record the maximum and minimum voltage indicated on CHANNEL 5.

BLOWER TELEMETRY DISCRETE

54. Record the maximum and/or minimum voltage indicated on CHANNEL 6 or both if the blower is cycling.

MASTER ALARM TEST

55. Press the INTERFACE LOAD TEST pushbutton on the Test Selector panel and set the INTERFACE LOAD TEST selector to 1.

56. Press the TEST START pushbutton.

57. Observe and record that the MASTER ALARM pushbutton on the Indicator Control panel lights.

58. Press the TEST STOP and INTERFACE LOAD TEST pushbuttons on the Test Selector panel. The MASTER ALARM pushbutton shall go out. Set the INTERFACE LOAD TEST selector to OFF.

MASTER ALARM RESET TEST

59. Press the CONTINUITY TEST pushbutton on the Test Selector panel and set the CONTINUITY TEST selector to 10.

60. Set the CONDITION LAMPS switch on the Indicator Control panel to TEST.

61. Press the MASTER ALARM pushbutton. Observe and record that the pushbutton lights.

---

62. Press the CONTINUITY TEST pushbutton on the Test Selector panel. Set the CONTINUITY TEST selector to OFF.

63. Observe and record that the electroluminescent lighting on the Indicator Control panel is lighted.

64. Perform the following DSKY operations:

a. VERB 11 NOUN 10 ENTR
b. 00012 ENTR

27. Allow the PIPA and IRIG temperatures to stabilize as indicated by a voltage change of 0.05 volt or less over a one hour period on CHANNELS 3 and 4. Stop the Oscillograph. Record the average voltage indication for the stability period of CHANNELS 3 and 4.

28. Calculate and record the difference between the PIPA and IRIG voltage indications.

DATE 30 JUN 66

SUBSYSTEM G & N SYSTEM

ASSY

29. Start the Oscillograph by setting the CHART DRIVE switch to MM/SEC.

30. Press the PROCEED/ISS OPERATE pushbutton on the Test Control panel. The NO ATT lamp on the DSKY shall light.

31. Press the EVENT MARKER on the Oscillograph Control panel immediately after step 30 and record the time.

32. Verify and record by observing the PIPA Monitor Scope that no PIPA torquing is present until after the DSKY display changes from 00030 to 40000 to 00000. The NO ATT lamp shall be not lighted.

33. Press the EVENT MARKER on the Oscillograph Control panel immediately after the DSKY display changes from 00030 to 40000 to 00000.

34. After the DSKY display changes from 00030 to 40000 to 00000, perform the following DSKY operation:

a. VERB 16 NOUN 20 ENTER

35. Record the OG, MG, and IG positions as indicated on the Gimbal Position Control panel and as indicated on the DSKY displays. All axes shall indicate approximately 000.00°.

1X SIN AND COS SIGNALS

36. Perform the following DSKY operations:

a. VERB 40 NOUN 20 ENTR
b. Wait 5 seconds.
c. VERB 41 NOUN 20 ENTR
d. Observe
VERB 21 NOUN 22 Flashing
e. +00000 ENTR
f. Observe
VERB 22 NOUN 22 Flashing
g. +00000 ENTR
h. Observe
VERB 23 NOUN 22 Flashing
i. +00000 ENTR
j. Observe
NO ATT lamp lights.

37. Set the PAVM FUNCTION selector to TOTAL and measure the following signals on the highest usable sensitivity of the meters. Record indications:

Signal	CROSSBAR CONTROL
a. Cos A_{OG} 1X	241
b. Cos A_{MG} 1X	242
c. Cos A_{IG} 1X	243
d. Sin A_{OG} 1X	142
e. Sin A_{MG} 1X	143
f. Sin A_{IG} 1X	144

38. Set the CROSSBAR CONTROL to 220. Adjust the G & N POWER ADJUST control until the DVM indicates 28.00 (±0.25) vdc.

STANDBY TO OPERATE TEMPERATURE TRANSIENT

39. 15 minutes after performing step 31, press the EVENT MARKER on the Oscillograph Control panel and record the time and voltage indication of CHANNEL 3.

40. 30 minutes after performing step 31, press the EVENT MARKER on the Oscillograph Control panel and record the time and voltage indicated on CHANNEL 4.

PSA THERMISTOR

41. Measure the 800 CPS P/S temperature thermistor resistance across pins

DATE 30 JUN 66

TB5-12 and TB5-13 on TPA #2. Use a 10K ohm resistor in series with one of the measuring probes. Subtract the resistance of the 10K resistor from the measured resistance. Record indication.

TEMP MON 1 THERMISTOR

42. Measure the Temp Mon 1 thermistor resistance across pins TB5-14 and TB5-15 of TPA #2. Use a 10K ohm resistor in series with one of the measuring probes. Subtract the resistance of the 10K resistor from the measured resistance. Record indication.

PIPA CAL. MOD. THERMISTOR

43. Measure the PIPA Cal. Mod. thermistor resistance across TB1-31 and TB1-27 on TPA #2. Use a 10K ohm resistor in series with one of the measuring probes. Subtract the resistance of the 10K resistor from the measured resistance. Record indication.

IMU CAGE

44. Perform the following DSKY operations:

a. VERB 40 NOUN 20 ENTR
b. Wait 5 seconds
c. VERB 41 NOUN 20 ENTR
d. Observe

k. Observe
NO ATT lamp lights

45. When the DSKY registers display
Row 1 approximately +00200
Row 2 approximately +00200
Row 3 approximately +00200

Enter VERB 34 into the DSKY and press the ENTR pushbutton. Press and hold the IMU CAGE COMMAND pushbutton on the Test Control Panel.

46. Set the PAVM FUNCTION selector to TOTAL and measure the following signals on the highest usable sensitivity of the meters. Record the indications:

Signal	CROSSBAR CONTROL
a. Sin A_{OG} 1X	142
b. Sin A_{MG} 1X	143
c. Sin A_{IG} 1X	144

47. Release the IMU CAGE COMMAND pushbutton on the Test Control Panel and perform the following DSKY operations:

a. VERB 01 NOUN 10 ENTR
b. 00012 ENTR

48. Record the display of Row 1. Enter VERB 36 and press the ENTR pushbutton.

INERTIAL TEMPERATURE CONTROL POINT

48A. Perform the following DSKY operations:

a. VERB 40 NOUN 20 ENTR
b. Wait 5 seconds.
c. VERB 41 NOUN 20 ENTR
d. Observe
VERB 21 NOUN 22 Flashing
e. +00000 ENTR
f. Observe
VERB 22 NOUN 22 Flashing
g. +00000 ENTR
h. Observe
VERB 23 NOUN 22 Flashing
i. +00000 ENTR
j. Observe
NO ATT lamp lights.

49. Allow the PIPA and IRIG temperatures to stabilize as indicated by a voltage change of 0.05 volt or less over a one hour period. Stabilization should occur within 2 hours since performance of step 31. Record the average voltage indication for the stability period of CHANNELS 3 and 4. Stop the Oscillograph.

50. Compare the PIPA STANDBY voltage indication from step 27 with the PIPA temperature recorded in step 49. Calculate and record the difference.

51. Compare the PIPA temperature recorded in step 39 with the PIPA temperature recorded in step 49. Calculate and record the difference.

52. Compare the IRIG temperature recorded in step 40 with the IRIG temperature recorded in step 49. Calculate and record the difference.

HEATER TELEMETRY DISCRETE

53. Record the maximum and minimum voltage indicated on CHANNEL 5.

BLOWER TELEMETRY DISCRETE

54. Record the maximum and/or minimum voltage indicated on CHANNEL 6 or both if the blower is cycling.

MASTER ALARM TEST

55. Press the INTERFACE LOAD TEST pushbutton on the Test Selector panel and set the INTERFACE LOAD TEST selector to 1.

56. Press the TEST START pushbutton.

57. Observe and record that the MASTER ALARM pushbutton on the Indicator Control panel lights.

58. Press the TEST STOP and INTERFACE LOAD TEST pushbuttons on the Test Selector panel. The MASTER ALARM pushbutton shall go out. Set the INTERFACE LOAD TEST selector to OFF.

MASTER ALARM RESET TEST

59. Press the CONTINUITY TEST pushbutton on the Test Selector panel and set the CONTINUITY TEST selector to 10.

60. Set the CONDITION LAMPS switch on the Indicator Control panel to TEST.

61. Press the MASTER ALARM pushbutton. Observe and record that the pushbutton lights.

---

62. Press the CONTINUITY TEST pushbutton on the Test Selector panel. Set the CONTINUITY TEST selector to OFF.

63. Observe and record that the electroluminescent lighting on the Indicator Control panel is lighted.

64. Perform the following DSKY operations:

IMPORTANT

See below.

INTERVAL

TOOLS AND MATERIAL

IMPORTANT: 1. Adjust Coolant Console TEMP controls as necessary to keep the GDB temperature meter nulled within the tolerances of step 10 of JDC 12203.

2. Oscillograph sensitivities given in this JDC are nominal values to be used only as a guide. Operator may change sensitivities as required.

INITIALIZATION

1. Insure the OIA ON/ISS POWER DISABLED and the PROCEED portion of the PROCEED/ISS STANDBY pushbuttons on the Test Control panel are lighted.

2. Press the CGC/LGC POWER ON and the 400 CPS POWER ON pushbuttons to apply power to the CGC and provide DSKY illumination. The pushbuttons shall light.

3. Insure the STBY lamp on the DSKY is not lighted. If lighted, press the STBY pushbutton until the STBY lamp goes out. Press RSET and perform the following DSKY operations:

a. VERB 61 ENTR

b. VERB 36 ENTR

c. Press ALARM RESET pushbutton on Programmer and Monitor panel of CTS.

4. Press the PROCEED/ISS STANDBY pushbutton. The PROCEED lamp shall go out and the ISS STANDBY lamp shall light.

VERIFICATION WITH SIDL REQUIRED BEFORE USE

DATE 30 JUN 66

JOB OPERATE CONTROL TEST

JDC 12207 REV G PAGE 2 OF 7

SUBSYSTEM G & N SYSTEM

ASSY

5. Insure that the PSA HTR PWR lamp on the Temperature Monitor panel is lighted.

6. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 175. Adjust the G & N VOLTAGE ADJUST until the DVM indicates 28.8 (±0.25) vdc. Record indication.

IMU TIME DELAY

7. Deleted.

8. Deleted.

9. Deleted.

10. Perform the following DSKY operations:

a. VERB 36 ENTR

b. VERB 11 NOUN 10 ENTR

c. 00012 ENTR

11. Set switches and controls on the Counter as follows:

DISPLAY RESET to ZERO

CLOCK FREQUENCY DIVIDER to 10^4

CLOCK SELECTOR to INT

INPUT SELECTOR to C SENSE

SENSE SELECTOR to FWD

FUNCTION to COUNT

12. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 259.

13. Simultaneously press the RESET pushbutton on the Counter and the PROCEED/ISS OPERATE pushbutton on the Test Control panel. The NO ATT lamp on the DSKY shall light. Observe the absence of +120 vdc on the DVM.

14. Set the FUNCTION selector on the Counter to OFF immediately after the DSKY display changes from 00030 to 40000 and observe the voltage on the DVM indicates +120 vdc within 10 seconds. The NO ATT lamp on the DSKY shall go out.

15. Record the time displayed on the Counter.

16. Perform the following DSKY operations:

a. VERB 40 NOUN 20 ENTR

b. Wait 5 seconds.

c. VERB 41 NOUN 20 ENTR

d. Observe

VERB 21 NOUN 22 Flashing

i. +22500 ENTR

j. Observe

NO ATT lamp lights

The GIMBAL LOCK lamps on the DSKY and the Monitor panel shall light. Press the PROCEED/ISS STANDBY pushbutton on the Test Control panel. The ISS STANDBY portion shall light and the PROCEED/ISS OPERATE pushbutton shall go out.

17. Perform the following DSKY operations:

a. VERB 06 NOUN 20 ENTR

b. Observe the DSKY registers display

Row 1 approximately +22500

Row 2 approximately +22500

Row 3 approximately +22500

DATE 30 JUN 66

JOB OPERATE CONTROL TEST

JDC 12207 REV G PAGE 3 OF 7

SUBSYSTEM G & N SYSTEM

ASSY

18. Set CHANNELS 3, 4, 5, and 6 of the Oscillograph Signal Selector panel to monitor the following signals:

a. Accel Temperature on CHANNEL 3-3 DC.

b. IRIG Temperature on CHANNEL 4-3 DC.

c. IMU Heater Discrete on CHANNEL 5 AUX.

d. IMU Blower Discrete on CHANNEL 6 AUX.

19. Insure that the CHANNEL 3 DC, CHANNEL 4 DC, CHANNEL 5 DC and CHANNEL 6 AC pushbuttons on the Oscillograph Signal Selector panel are lighted.

20. Connect a jumper from TPA #2 TB4-21 (hi) and TPA #2 TB5-22 (lo) to TPA #2 DIRECT PROBES J9 (hi) and J10 (lo) respectively.

21. Connect a jumper from PROBES OUTPUT, DIRECT to CH-5, IN-DC on the Auxiliary Input Panel.

22. Connect jumpers from TPA #2 TB4-20 (hi) and TPA #2 TB5-33 (lo) to CH 6, IN-AC on the Auxiliary Input Panel.

23. Zero and calibrate CHANNEL 3, 4, and 5 on the Oscillograph Amplifier. CHANNEL 6 may be calibrated after step 35.

24. Mark the Oscillograph Channels as follows:

a. CHANNEL 3 "start of PIPA TEMP stability test"

b. CHANNEL 4 "start of IRIG TEMP stability test"

c. CHANNEL 5 "start of IMU Heater Discrete"

d. CHANNEL 6 "start of IMU Blower Discrete"

25. Set sensitivity on Oscillograph Amplifier for CHANNEL 3 to .2 V/CM, CHANNEL 4 to 2 V/CM, CHANNEL 5 to 20 V/CM, and CHANNEL 6 to 2 V/MM. Set CHART SPEEDS to 1 and CHART DRIVE to MM/SEC on Oscillograph Control panel.

NOTE: Read and understand steps 26 through 49 noting that steps 39 and 40 shall be performed 15 and 30 minutes respectively after step 31.

TURN-ON CAGE TEST

26. Perform the following DSKY operations:

a. VERB 11 NOUN 10 ENTR

b. 00012 ENTR

27. Allow the PIPA and IRIG temperatures to stabilize as indicated by a voltage change of 0.05 volt or less over a one hour period on CHANNELS 3 and 4. Stop the Oscillograph. Record the average voltage indication for the stability period of CHANNELS 3 and 4.

28. (Deleted)

29. Start the Oscillograph by setting the CHART DRIVE switch to MM/SEC.

30. Press the PROCEED/ISS OPERATE pushbutton on the Test Control panel. The NO ATT lamp on the DSKY shall light.

31. Press the EVENT MARKER on the Oscillograph Control panel immediately after step 30 and record the time.

DATE 30 JUN 66

JOB OPERATE CONTROL TEST

JDC 12207 REV G PAGE 4 OF 7

VERB 22 NOUN 22 Flashing

g. +00000 ENTR

h. Observe

VERB 23 NOUN 22 Flashing

i. +00000 ENTR

j. Observe

NO ATT lamp lights.

37. Set the PAVM FUNCTION selector to TOTAL and measure the following signals on the highest usable sensitivity of the meters. Record indications:

Signal	CROSSBAR CONTROL
a. Cos A_{OG} 1X	241
b. Cos A_{MG} 1X	242
c. Cos A_{IG} 1X	243
d. Sin A_{OG} 1X	142
e. Sin A_{MG} 1X	143
f. Sin A_{IG} 1X	144

38. Set the CROSSBAR CONTROL to 220. Adjust the G & N POWER ADJUST control until the DVM indicates 28.00 (±0.25) vdc.

STANDBY TO OPERATE TEMPERATURE TRANSIENT

39. 15 minutes after performing step 31, press the EVENT MARKER on the Oscillograph Control panel and record the time and voltage indication of CHANNEL 3. Change sensitivity on Oscillograph Amplifier for CHANNEL 3 to the smallest usable scale.

40. 30 minutes after performing step 31, press the EVENT MARKER on the Oscillograph Control panel and record the time and voltage indicated on CHANNEL 4. Change sensitivity on Oscillograph Amplifier for CHANNEL 4 to the smallest usable scale.

PSA THERMISTOR

41. Measure the 800 CPS P/S temperature thermistor resistance across pins

DATE 30 JUN 66

TB5-12 and TB5-13 on TPA #2. Use a 10K ohm resistor in series with one of the measuring probes. Subtract the resistance of the 10K resistor from the measured resistance. Record indication.

TEMP MON 1 THERMISTOR

42. Measure the Temp Mon 1 thermistor resistance across pins TB5-14 and TB5-15 of TPA #2. Use a 10K ohm resistor in series with one of the measuring probes. Subtract the resistance of the 10K resistor from the measured resistance. Record indication.

PIPA CAL. MOD. THERMISTOR

43. Measure the PIPA Cal. Mod. thermistor resistance across TB1-31 and TB1-27 on TPA #2. Use a 10K ohm resistor in series with one of the measuring probes. Subtract the resistance of the 10K resistor from the measured resistance. Record indication.

IMU CAGE

44. Perform the following DSKY operations:

a. VERB 40 NOUN 20 ENTR
b. Wait 5 seconds
c. VERB 41 NOUN 20 ENTR
d. Observe

i. +00200 ENTR
j. VERB 16 NOUN 20 ENTR
k. Observe
NO ATT lamp lights

45. When the DSKY registers display
Row 1 approximately +00200
Row 2 approximately +00200
Row 3 approximately +00200

Enter VERB 34 into the DSKY and press the ENTR pushbutton. Press and hold the IMU CAGE COMMAND pushbutton on the Test Control Panel.

46. Set the PAVM FUNCTION selector to TOTAL and measure the following signals on the highest usable sensitivity of the meters. Record the indications:

Signal	CROSSBAR CONTROL
a. Sin A_{OG} 1X	142
b. Sin A_{MG} 1X	143
c. Sin A_{IG} 1X	144

47. Release the IMU CAGE COMMAND pushbutton on the Test Control Panel and perform the following DSKY operations:

a. VERB 01 NOUN 10 ENTR
b. 00012 ENTR

48. Record the display of Row 1. Enter VERB 36 and press the ENTR pushbutton.

INERTIAL TEMPERATURE CONTROL POINT

48A. Perform the following DSKY operations:

a. VERB 40 NOUN 20 ENTR
b. Wait 5 seconds.
c. VERB 41 NOUN 20 ENTR
d. Observe
VERB 21 NOUN 22 Flashing
e. +00000 ENTR
f. Observe
VERB 22 NOUN 22 Flashing
g. +00000 ENTR
h. Observe
VERB 23 NOUN 22 Flashing
i. +00000 ENTR
j. Observe
NO ATT lamp lights.

49. Allow the PIPA and IRIG temperatures to stabilize as indicated by a voltage change of 0.05 volt or less over a one hour period. Stabilization should occur within 2 hours since performance of step 31. Record the average voltage indication for the stability period of CHANNELS 3 and 4. Stop the Oscillograph.

50. Compare the PIPA STANDBY voltage indication from step 27 with the PIPA temperature recorded in step 49. Calculate and record the difference.

51. Compare the PIPA temperature recorded in step 39 with the PIPA temperature recorded in step 49. Calculate and record the difference.

52. Compare the IRIG temperature recorded in step 40 with the IRIG temperature recorded in step 49. Calculate and record the difference.

HEATER TELEMETRY DISCRETE

53. Record the maximum and minimum voltage indicated on CHANNEL 5.

BLOWER TELEMETRY DISCRETE

54. Record the maximum and/or minimum voltage indicated on CHANNEL 6 or both if the blower is cycling.

MASTER ALARM TEST

55. Press the INTERFACE LOAD TEST pushbutton on the Test Selector panel and set the INTERFACE LOAD TEST selector to 1.

56. Press the TEST START pushbutton.

57. Observe and record that the MASTER ALARM pushbutton on the Indicator Control panel lights.

58. Press the TEST STOP and INTERFACE LOAD TEST pushbuttons on the Test Selector panel. The MASTER ALARM pushbutton shall go out. Set the INTERFACE LOAD TEST selector to OFF.

MASTER ALARM RESET TEST

59. Press the CONTINUITY TEST pushbutton on the Test Selector panel and set the CONTINUITY TEST selector to 10.

60. Set the CONDITION LAMPS switch on the Indicator Control panel to TEST.

61. Press the MASTER ALARM pushbutton. Observe and record that the pushbutton lights.

---

62. Press the CONTINUITY TEST pushbutton on the Test Selector panel. Set the CONTINUITY TEST selector to OFF.

63. Observe and record that the electroluminescent lighting on the Indicator Control panel is lighted.

64. Perform the following DSKY operations:

JOB OPERATE CONTROL TEST

JDC 12207 REV. H PAGE 1 OF 7

INITIAL TDRR 29882 D.S. PGS 4

SUBSYSTEM G & N SYSTEM

ASSY.

DESCRIPTION Provide Operate Control Test for IMU Time Delay, Gimbal Ambiguity, 1X Sin and Cos Signals, Standby to Operate Temperature Transient, PSA Thermistor, Temp. Mon. 1 Thermistor, PIPA Cal. Mod. Thermistor, Auto Cage, Inertial Temperature Control Point, Heater Telemetry Discrete, Blower Telemetry Discrete, Master Alarm and Normalization.

REFERENCES PS-2015000

IMPORTANT See below.

INTERVAL

TOOLS AND MATERIAL

IMPORTANT: 1. Adjust Coolant Console TEMP controls as necessary to keep the GDB temperature meter nulled within the tolerances of step 10 of JDC 12203.

2. Oscillograph sensitivities given in this JDC are nominal values to be used only as a guide. Operator may change sensitivities as required.

INITIALIZATION

1. Insure the OIA ON/ISS POWER DISABLED and the PROCEED portion of the PROCEED/ISS STANDBY pushbuttons on the Test Control panel are lighted.

2. Press the CGC/LGC POWER ON and the 400 CPS POWER ON pushbuttons to apply power to the CGC and provide DSKY illumination. The pushbuttons shall light.

3. Insure the STBY lamp on the DSKY is not lighted. If lighted, press the PRO (or STBY) pushbutton until the STBY lamp goes out. Press RSET and perform the following DSKY operations:

a. VERB 61 ENTR

b. VERB 36 ENTR

c. Press ALARM RESET pushbutton on Programmer and Monitor panel of CTS.

4. Press the PROCEED/ISS STANDBY pushbutton. The PROCEED lamp shall go out and the ISS STANDBY lamp shall light.

VERIFICATION WITH SIDL REQUIRED BEFORE USE

DATE 30 JUN 66

---

5. Insure that the PSA HTR PWR lamp on the Temperature Monitor panel is lighted.

6. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 175. Adjust the G & N POWER ADJUST until the DVM indicates 28.8 (±0.25) vdc. Record indication.

IMU TIME DELAY

7. Deleted.

8. Deleted.

9. Deleted.

10. Perform the following DSKY operations:

a. VERB 36 ENTR

b. VERB 11 NOUN 10 ENTR

c. 00012 ENTR

11. Set switches and controls on the Counter as follows:

DISPLAY RESET to ZERO

CLOCK FREQUENCY DIVIDER to 10^4

CLOCK SELECTOR to INT

INPUT SELECTOR to G SENSE

SENSE SELECTOR to FWD

FUNCTION to COUNT

12. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 259.

13. Simultaneously press the RESET pushbutton on the Counter and the PROCEED/ISS OPERATE pushbutton on the Test Control panel. The NO ATT lamp on the DSKY shall light. Observe the absence of +120 vdc on the DVM.

14. Set the FUNCTION selector on the Counter to OFF immediately after the DSKY display changes from 00030 to 40000 and observe the voltage on the DVM indicates +120 vdc within 10 seconds. The NO ATT lamp on the DSKY shall go out.

15. Record the time displayed on the Counter.

16. Perform the following DSKY operations:

a. VERB 40 NOUN 20 ENTR

b. Wait 5 seconds.

c. VERB 36 ENTR

d. VERB 41 NOUN 20 ENTR

e. Observe

VERB 21 NOUN 22 Flashing

f. +22500 ENTR

g. Observe

VERB 22 NOUN 22 Flashing

h. +22500 ENTR

i. Observe

VERB 23 NOUN 22 Flashing

j. +22500 ENTR

k. Observe

NO ATT lamp lights

The GIMBAL LOCK lamps on the DSKY and the Monitor panel shall light. Press the PROCEED/ISS STANDBY pushbutton on the Test Control panel. The ISS STANDBY portion shall light and the PROCEED/ISS OPERATE pushbutton shall go out.

17. Perform the following DSKY operations:

a. VERB 06 NOUN 20 ENTR

b. Observe the DSKY registers display

Row 1 approximately +22500

Row 2 approximately +22500

Row 3 approximately +22500

---

18. Set CHANNELS 3, 4, 5, and 6 of the Oscillograph Signal Selector panel to monitor the following signals:

a. Accel Temperature on CHANNEL 3-3 DC.

b. IRIG Temperature on CHANNEL 4-3 DC.

c. IMU Heater Discrete on CHANNEL 5-15.

d. IMU Blower Discrete on CHANNEL 6-15.

19. Insure that the CHANNEL 3 DC, CHANNEL 4 DC, CHANNEL 5 DC and CHANNEL 6 AC pushbuttons on the Oscillograph Signal Selector panel are lighted.

20. Connect a jumper from TPA #2 TB4-21 (hi) and TPA #2 TB5-22 (lo) to TPA #2 DIRECT PROBES J9 (hi) and J10 (lo) respectively.

21. Connect a jumper from PROBES OUTPUT, DIRECT to CH-5, IN-DC on the Auxiliary Input Panel.

22. Connect jumpers from TPA #2 TB4-20 (hi) and TPA #2 TB5-33 (lo) to CH 6, IN-AC on the Auxiliary Input Panel.

23. Zero and calibrate CHANNEL 3, 4, and 5 on the Oscillograph Amplifier. CHANNEL 6 may be calibrated after step 35.

24. Mark the Oscillograph Channels as follows:

a. CHANNEL 3 "start of PIPA TEMP stability test"

b. CHANNEL 4 "start of IRIG TEMP stability test"

c. CHANNEL 5 "start of IMU Heater Discrete"

d. CHANNEL 6 "start of IMU Blower Discrete"

25. Set sensitivity on Oscillograph Amplifier for CHANNEL 3 to .2 V/CM, CHANNEL 4 to 2 V/CM, CHANNEL 5 to 20 V/CM, and CHANNEL 6 to 2 V/MM. Set CHART SPEEDS to 1 and CHART DRIVE to MM/SEC on Oscillograph Control panel.

NOTE: Read and understand steps 26 through 49 noting that steps 39 and 40 shall be performed 15 and 30 minutes respectively after step 31.

TURN-ON CAGE TEST

26. Perform the following DSKY operations:

a. VERB 11 NOUN 10 ENTR

b. 00012 ENTR

27. Allow the PIPA temperature to stabilize as indicated by a voltage change of 0.05 volt or less over a one hour period on CHANNEL 3.

28. Measure and record PIPA temperature deviation on DVM by setting CROSSBAR CONTROL on Primary Signal Selector panel to 255.

29. Measure and record IRIG temperature deviation on DVM by setting CROSSBAR CONTROL to 156.

30. Press the PROCEED/ISS OPERATE pushbutton on the Test Control panel. The NO ATT lamp on the DSKY shall light.

31. Press the EVENT MARKER on the Oscillograph Control panel immediately after step 30 and record the time.

---

32. Verify and record by observing the PIPA Monitor Scope that no PIPA torquing is present until after the DSKY display changes from 00030 to 40000 to 00000. The NO ATT lamp shall be not lighted.

33. Press the EVENT MARKER on the Oscillograph Control panel immediately after the DSKY display changes from 00030 to 40000 to 00000.

34. After the DSKY display changes from 00030 to 40000 to 00000, perform the following DSKY operation:

a. VERB 16 NOUN 20 ENTER

35. Record the OG, MG, and IG positions as indicated on the Gimbal Position Control panel and as indicated on the DSKY displays. All axes shall indicate approximately 000.00°.

1X SIN AND COS SIGNALS

36. Perform the following DSKY operations:

a. VERB 40 NOUN 20 ENTR

b. Wait 5 seconds.

c. VERB 41 NOUN 20 ENTR

d. Observe

VERB 21 NOUN 22 Flashing

e. +00000 ENTR

f. Observe

VERB 22 NOUN 22 Flashing

g. +00000 ENTR

h. Observe

VERB 23 NOUN 22 Flashing

i. +00000 ENTR

j. Observe

NO ATT lamp lights.

37. Set the PAVM FUNCTION selector to TOTAL and measure the following signals on the highest usable sensitivity of the meters. Record indications:

Signal	CROSSBAR CONTROL
a. Cos A_{OG} 1X	241
b. Cos A_{MG} 1X	242
c. Cos A_{IG} 1X	243
d. Sin A_{OG} 1X	142
e. Sin A_{MG} 1X	143
f. Sin A_{IG} 1X	144

38. Set the CROSSBAR CONTROL to 220. Adjust the G & N POWER ADJUST control until the DVM indicates 28.00 (±0.25) vdc.

STANDBY TO OPERATE TEMPERATURE TRANSIENT

39. 15 minutes after performing step 31, press EVENT MARKER on Oscillograph Control panel and record the time. Immediately set CROSSBAR CONTROL to 255 and measure and record PIPA temperature deviation as indicated on DVM.

40. 30 minutes after performing step 31, press EVENT MARKER on Oscillograph Control panel and record the time. Immediately set CROSSBAR CONTROL to 156 and measure and record IRIG temperature deviation as indicated on DVM.

PSA THERMISTOR

41. Measure the 800 CPS P/S temperature thermistor resistance across pins

TB5-12 and TB5-13 on TPA #2. Use a 10K ohm resistor in series with one of the measuring probes. Subtract the resistance of the 10K resistor from the measured resistance. Record indication.

TEMP MON 1 THERMISTOR

42. Measure the Temp Mon 1 thermistor resistance across pins TB5-14 and TB5-15 of TPA #2. Use a 10K ohm resistor in series with one of the measuring probes. Subtract the resistance of the 10K resistor from the measured resistance. Record indication.

PIPA CAL. MOD. THERMISTOR

43. Measure the PIPA Cal. Mod. thermistor resistance across TB1-31 and TB1-27 on TPA #2. Use a 10K ohm resistor in series with one of the measuring probes. Subtract the resistance of the 10K resistor from the measured resistance. Record indication.

IMU CAGE

44. Perform the following DSKY operations:

a. VERB 40 NOUN 20 ENTR
b. Wait 5 seconds
c. VERB 41 NOUN 20 ENTR
d. Observe
VERB 21 NOUN 22 Flashing
e. +00200 ENTR
f. Observe
VERB 22 NOUN 22 Flashing
g. +00200 ENTR
h. Observe
VERB 23 NOUN 22 Flashing
i. +00200 ENTR
j. VERB 16 NOUN 20 ENTR
k. Observe
NO ATT lamp lights

45. When the DSKY registers display
Row 1 approximately +00200
Row 2 approximately +00200
Row 3 approximately +00200

Enter VERB 34 into the DSKY and press the ENTR pushbutton. Press and hold the IMU CAGE COMMAND pushbutton on the Test Control Panel.

46. Set the PAVM FUNCTION selector to TOTAL and measure the following signals on the highest usable sensitivity of the meters. Record the indications:

Signal	CROSSBAR CONTROL
a. Sin A_{OG} 1X	142
b. Sin A_{MG} 1X	143
c. Sin A_{IG} 1X	144

47. Release the IMU CAGE COMMAND pushbutton on the Test Control Panel and perform the following DSKY operations:

a. VERB 01 NOUN 10 ENTR
b. 00012 ENTR

48. Record the display of Row 1. Enter VERB 36 and press the ENTR pushbutton.

INERTIAL TEMPERATURE CONTROL POINT

48A. Perform the following DSKY operations:

a. VERB 40 NOUN 20 ENTR
b. Wait 5 seconds.
c. VERB 41 NOUN 20 ENTR
d. Observe
VERB 21 NOUN 22 Flashing
e. +00000 ENTR
f. Observe
VERB 22 NOUN 22 Flashing
g. +00000 ENTR
h. Observe
VERB 23 NOUN 22 Flashing
i. +00000 ENTR
j. Observe
NO ATT lamp lights.

49. Allow the PIPA and IRIG temperatures to stabilize as indicated by a voltage change of 0.05 volt or less over a one hour period as monitored on Oscillograph. Stabilization should occur within 2 hours after performance of step 31. Set CROSSBAR CONTROL to 255 and measure and record PIPA temperature deviation as indicated on DVM. Set CROSSBAR CONTROL to 156 and measure and record IRIG temperature deviation as indicated on DVM. Stop Oscillograph.

50. Compare the PIPA temperature deviation recorded in step 28 with the PIPA temperature deviation recorded in step 49. Calculate and record the difference.

51. Determine from the Oscillograph chart the maximum PIPA temperature deviation that occurred during the 15 minute period between performance of step 31 and step 39.

52. Compare the PIPA temperature deviation recorded in step 39 with the PIPA temperature deviation recorded in step 49. Calculate and record the difference.

53. Compare the IRIG temperature deviation recorded in step 40 with the IRIG temperature deviation recorded in step 49. Calculate and record the difference.

HEATER TELEMETRY DISCRETE

54. Record the maximum and minimum voltage indicated on CHANNEL 5.

BLOWER TELEMETRY DISCRETE

55. Record the maximum and/or minimum voltage indicated on CHANNEL 6 or both if the blower is cycling.

MASTER ALARM TEST

56. Press the INTERFACE LOAD TEST pushbutton on the Test Selector panel and set the INTERFACE LOAD TEST selector to 1.

57. Press the TEST START pushbutton.

58. Observe and record that the MASTER ALARM pushbutton on the Indicator Control panel lights.

59. Press the TEST STOP and INTERFACE LOAD TEST pushbuttons on the Test Selector panel. The MASTER ALARM pushbutton shall go out. Set the INTERFACE LOAD TEST selector to OFF.

MASTER ALARM RESET TEST

60. Press the CONTINUITY TEST pushbutton on the Test Selector panel and set the CONTINUITY TEST selector to 10.

61. Set the CONDITION LAMPS switch on the Indicator Control panel to TEST.

62. Press the MASTER ALARM pushbutton. Observe and record that the pushbutton lights.

63. Press the CONTINUITY TEST pushbutton on the Test Selector panel. Set the CONTINUITY TEST selector to OFF.

64. Observe and record that the electroluminescent lighting on the Indicator Control panel is lighted.

65. Perform the following DSKY operation:

IMPORTANT
See below.

INTERVAL

TOOLS AND MATERIAL

IMPORTANT: 1. Adjust Coolant Console TEMP controls as necessary to keep the GDB temperature meter nulled within the tolerances of step 10 of JDC 12203.

2. Oscillograph sensitivities given in this JDC are nominal values to be used only as a guide. Operator may change sensitivities as required.

3. Insure that the G & N Mounting Fixture is at the 32.5° position.

INITIALIZATION

NOTE: If the VERB display on the DSKY contains a number from 11 through 17, the KEY REL indicator may flash when DSKY entries are made.

NOTE: The CMC warning lamp on the Indicator Control panel may light for approximately 10 seconds when +28 VDC CMC Operate power is applied.

1. Insure the OIA ON/ISS POWER DISABLED and the PROCEED portion of the PROCEED/ISS STANDBY pushbuttons on the Test Control panel are lighted.

2. Press the CGC/LGC POWER ON and the 400 CPS POWER ON pushbuttons to apply power to the CGC and provide DSKY illumination. The pushbuttons shall light.

VERIFICATION WITH SIDL REQUIRED BEFORE USE

DATE 30 JUN 66

JOB OPERATE CONTROL TEST | **JDC** 12207 **REV** J **PAGE** 2 **OF** 7

SUBSYSTEM G & N SYSTEM | **ASSY**

3. If STBY condition lamp on DSKY is lighted, press and hold PRO (or STBY) pushbutton until lamp goes out. If lamp does not go out within 5 seconds, release and press pushbutton again. If pushbutton is pressed more than once, record in the System log the number of times pressed. Press RSET and perform the following DSKY operations:

a. VERB 61 ENTR
b. VERB 36 ENTR
c. Press ALARM RESET pushbutton on Programmer and Monitor panel of CTS.

4. Press the PROCEED/ISS STANDBY pushbutton. The PROCEED lamp shall go out and the ISS STANDBY lamp shall light.

5. Insure that the PSA HTR PWR lamp on the Temperature Monitor panel is lighted.

6. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 175. Adjust the G & N POWER ADJUST until the DVM indicates 28.8 (±0.25) vdc. Record indication.

IMU TIME DELAY

7. Deleted.

8. Deleted.

9. Deleted.

10. Perform the following DSKY operations:

a. VERB 36 ENTR
b. VERB 11 NOUN 10 ENTR
c. 00012 ENTR

11. Set switches and controls on the Counter as follows:

DISPLAY RESET to ZERO
CLOCK FREQUENCY DIVIDER to 10^4
CLOCK SELECTOR to INT
INPUT SELECTOR to C SENSE
SENSE SELECTOR to FWD
FUNCTION to COUNT

12. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 259.

13. Simultaneously press the RESET pushbutton on the Counter and the PROCEED/ISS OPERATE pushbutton on the Test Control panel. The NO ATT lamp on the DSKY shall light. Observe the absence of +120 vdc on the DVM.

14. Set the FUNCTION selector on the Counter to OFF immediately after the DSKY display changes from 00030 to 40000 and observe the voltage on the DVM indicates +120 vdc within 10 seconds. The NO ATT lamp on the DSKY shall go out.

15. Record the time displayed on the Counter.

16. Perform the following DSKY operations:

a. VERB 40 NOUN 20 ENTR
b. Wait 5 seconds.
c. VERB 36 ENTR
d. VERB 41 NOUN 20 ENTR

DATE 30 JUN 66

JOB OPERATE CONTROL TEST | **JDC** 12207 **REV** J **PAGE** 3 **OF** 7

SUBSYSTEM G & N SYSTEM | **ASSY**

The GIMBAL LOCK lamps on the DSKY and the Monitor panel shall light. Press the PROCEED/ISS STANDBY pushbutton on the Test Control panel. The ISS STANDBY portion shall light and the PROCEED/ISS OPERATE pushbutton shall go out.

17. Perform the following DSKY operations:

a. VERB 06 NOUN 30 ENTR
b. Observe the DSKY registers display
Row 1 approximately +09000
Row 2 approximately +09000
Row 3 approximately +09000

18. Set CHANNELS 3, 4, 5, and 6 of the Oscillograph Signal Selector panel to monitor the following signals:

a. Accel Temperature on CHANNEL 3-3.
b. IRIG Temperature on CHANNEL 4-3.
c. IMU Heater Discrete on CHANNEL 5-15.
d. IMU Blower Discrete on CHANNEL 6-15.

19. Insure that the CH 3 DC, CH 4 DC, CH 5 DC and CH 6 AC pushbuttons on the Oscillograph Signal Selector panel are lighted.

20. Connect a jumper from TPA #2 TB4-21 (hi) and TPA #2 TB5-22 (lo) to TPA #2 DIRECT PROBES J9 (hi) and J10 (lo) respectively.

21. Connect a jumper from PROBES OUTPUT, DIRECT to CH-5, IN-DC on the Auxiliary Input Panel.

22. Connect jumpers from TPA #2 TB4-20 (hi) and TPA #2 TB5-33 (lo) to CH 6, IN-AC on the Auxiliary Input Panel.

23. Zero and calibrate CHANNEL 3, 4, and 5 on the Oscillograph Amplifier. CHANNEL 6 may be calibrated after step 35.

24. Mark the Oscillograph Channels as follows:

a. CHANNEL 3 "start of PIPA TEMP stability test"
b. CHANNEL 4 "start of IRIG TEMP stability test"
c. CHANNEL 5 "start of IMU Heater Discrete"
d. CHANNEL 6 "start of IMU Blower Discrete"

25. Set sensitivity on Oscillograph Amplifier for CHANNEL 3 to .2 V/CM, CHANNEL 4 to 2 V/CM, CHANNEL 5 to 20 V/CM, and CHANNEL 6 to 2 V/MM. Set CHART SPEEDS to 1 and CHART DRIVE to MM/SEC on Oscillograph Control panel.

NOTE: Read and understand steps 26 through 49 noting that steps 39 and 40 shall be performed 15 and 30 minutes respectively after step 31.

TURN-ON CAGE TEST

26. Perform the following DSKY operations:

a. VERB 11 NOUN 10 ENTR
b. 00012 ENTR

DATE 30 JUN 66

JOB OPERATE CONTROL TEST | **JDC** 12207 **REV** J **PAGE** 4 **OF** 7

SUBSYSTEM G & N SYSTEM | **ASSY**

27. Allow the PIPA temperature to stabilize as indicated by a voltage change of 0.05 volt or less over a one hour period on CHANNEL 3.

28. Measure and record PIPA temperature deviation on DVM by setting CROSSBAR CONTROL on Primary Signal Selector panel to 255.

29. Measure and record IRIG temperature deviation on DVM by setting CROSSBAR CONTROL to 156.

30. Press the PROCEED/ISS OPERATE pushbutton on the Test Control panel. The NO ATT lamp on the DSKY shall light.

31. Press the EVENT MARKER on the Oscillograph Control panel immediately after step 30 and record the time.

32. Verify and record by observing the PIPA Monitor Scope that no PIPA torquing is present until after the DSKY display changes from 00030 to 40000 to 00000. The NO ATT lamp shall be not lighted.

33. Press the EVENT MARKER on the Oscillograph Control panel immediately after the DSKY display changes from 00030 to 40000 to 00000.

34. After the DSKY display changes from 00030 to 40000 to 00000, perform the following DSKY operation:

a. VERB 16 NOUN 20 ENTR

35. Record the OG, MG, and IG positions as indicated on the Gimbal Position Control panel and as indicated on the DSKY displays. All axes shall indicate approximately 000.00°.

1X SIN AND COS SIGNALS

36. Perform the following DSKY operations:

a. VERB 40 NOUN 20 ENTR
b. Wait 5 seconds.
c. VERB 41 NOUN 20 ENTR
d. Observe
VERB 21 NOUN 22 Flashing
e. +00000 ENTR
f. Observe
VERB 22 NOUN 22 Flashing
g. +00000 ENTR
h. Observe
VERB 23 NOUN 22 Flashing
i. +00000 ENTR
j. Observe
NO ATT lamp lights.

37. Set the PAVM FUNCTION selector to TOTAL and measure the following signals on the highest usable sensitivity of the meters. Record indications:

Signal	CROSSBAR CONTROL
a. Cos A_{OG} 1X	241
b. Cos A_{MG} 1X	242
c. Cos A_{IG} 1X	243
d. Sin A_{OG} 1X	142
e. Sin A_{MG} 1X	143
f. Sin A_{IG} 1X	144

38. Set the CROSSBAR CONTROL to 220. Adjust the G & N POWER ADJUST control until the DVM indicates 28.00 (±0.25) vdc.

DATE 30 JUN 66

STANDBY TO OPERATE TEMPERATURE TRANSIENT

39. 15 minutes after performing step 31, press EVENT MARKER on Oscillograph Control panel and record the time. Immediately set CROSSBAR CONTROL to 255 and measure and record PIPA temperature deviation as indicated on DVM.

40. 30 minutes after performing step 31, press EVENT MARKER on Oscillograph Control panel and record the time. Immediately set CROSSBAR CONTROL to 156 and measure and record IRIG temperature deviation as indicated on DVM.

PSA THERMISTOR

41. Measure the 800 CPS P/S temperature thermistor resistance across pins TB5-12 and TB5-13 on TPA #2. Use a 10K ohm resistor in series with one of the measuring probes. Subtract the resistance of the 10K resistor from the measured resistance. Record indication.

TEMP MON 1 THERMISTOR

42. Measure the Temp Mon 1 thermistor resistance across pins TB5-14 and TB5-15 of TPA #2. Use a 10K ohm resistor in series with one of the measuring probes. Subtract the resistance of the 10K resistor from the measured resistance. Record indication.

PIPA CAL. MOD. THERMISTOR

43. Measure the PIPA Cal. Mod. thermistor resistance across TB1-31 and TB1-27 on TPA #2. Use a 10K ohm resistor in series with one of the measuring probes. Subtract the resistance of the 10K resistor from the measured resistance. Record indication.

IMU CAGE

44. Perform the following DSKY operations:

a. VERB 40 NOUN 20 ENTR
b. Wait 5 seconds
c. VERB 41 NOUN 20 ENTR
d. Observe
VERB 21 NOUN 22 Flashing
e. +00200 ENTR
f. Observe
VERB 22 NOUN 22 Flashing
g. +00200 ENTR
h. Observe
VERB 23 NOUN 22 Flashing
i. +00200 ENTR
j. VERB 16 NOUN 20 ENTR
k. Observe
NO ATT lamp lights

45. When the DSKY registers display

Row 1 approximately +00200
Row 2 approximately +00200
Row 3 approximately +00200

Enter VERB 34 into the DSKY and press the ENTR pushbutton. Press and hold the IMU CAGE COMMAND pushbutton on the Test Control Panel.

46. Set the PAVM FUNCTION selector to TOTAL and measure the following signals on the highest usable sensitivity of the meters. Record the indications:

	Signal	CROSSBAR CONTROL
a.	Sin A_{OG} 1X	142
b.	Sin A_{MG} 1X	143
c.	Sin A_{IG} 1X	144

47. Release the IMU CAGE COMMAND pushbutton on the Test Control Panel and perform the following DSKY operations:

a. VERB 01 NOUN 10 ENTR
b. 00012 ENTR

48. Record the display of Row 1. Enter VERB 36 and press the ENTR pushbutton.

INERTIAL TEMPERATURE CONTROL POINT

48A. Perform the following DSKY operations:

a. VERB 40 NOUN 20 ENTR
b. Wait 5 seconds.
c. VERB 41 NOUN 20 ENTR
d. Observe
VERB 21 NOUN 22 Flashing
e. +00000 ENTR
f. Observe
VERB 22 NOUN 22 Flashing
g. +00000 ENTR
h. Observe
VERB 23 NOUN 22 Flashing
i. +00000 ENTR
j. Observe
NO ATT lamp lights.

49. Allow the PIPA and IRIG temperatures to stabilize as indicated by a voltage change of 0.05 volt or less over a one hour period as monitored on Oscillograph. Stabilization should occur within 2 hours after performance of step 31. Set CROSSBAR CONTROL to 255 and measure and record PIPA temperature deviation as indicated on DVM. Set CROSSBAR CONTROL to 156 and measure and record IRIG temperature deviation as indicated on DVM. Stop Oscillograph.

50. Compare the PIPA temperature deviation recorded in step 28 with the PIPA temperature deviation recorded in step 49. Calculate and record the difference.

51. Determine from the Oscillograph chart the maximum PIPA temperature deviation that occurred during the 15 minute period between performance of step 31 and step 39.

52. Compare the PIPA temperature deviation recorded in step 39 with the PIPA temperature deviation recorded in step 49. Calculate and record the difference.

53. Compare the IRIG temperature deviation recorded in step 40 with the IRIG temperature deviation recorded in step 49. Calculate and record the difference.

HEATER TELEMETRY DISCRETE

54. Record the maximum and minimum voltage indicated on CHANNEL 5.

BLOWER TELEMETRY DISCRETE

55. Record the maximum and/or minimum voltage indicated on CHANNEL 6 or both if the blower is cycling.

MASTER ALARM TEST

56. Press the INTERFACE LOAD TEST pushbutton on the Test Selector panel and set the INTERFACE LOAD TEST selector to 1.

---

57. Press the TEST START pushbutton.

58. Observe and record that the MASTER ALARM pushbutton on the Indicator Control panel lights.

59. Press the TEST STOP and INTERFACE LOAD TEST pushbuttons on the Test Selector panel. The MASTER ALARM pushbutton shall go out. Set the INTERFACE LOAD TEST selector to OFF.

60. Press the CONTINUITY TEST pushbutton on the Test Selector panel and set the CONTINUITY TEST selector to 10.

61. Set and hold the CONDITION LAMPS switch on the Indicator Control panel to TEST until completion of step 62.

62. Press the MASTER ALARM pushbutton. Observe and record that the pushbutton lights. The STAR ACQ lamp will light. Set CONDITION LAMPS switch to ON.

63. Press the CONTINUITY TEST pushbutton on the Test Selector panel. Set the CONTINUITY TEST selector to OFF.

64. Observe and record that the electroluminescent lighting on the Indicator Control panel is lighted.

65. Perform the following DSKY operation:

IMPORTANT
See below.

INTERVAL

TOOLS AND MATERIAL

IMPORTANT: 1. Adjust Coolant Console TEMP controls as necessary to keep the GDB temperature meter nulled within the tolerances of step 10 of JDC 12203.

2. Oscillograph sensitivities given in this JDC are nominal values to be used only as a guide. Operator may change sensitivities as required.

3. Insure that the G & N Mounting Fixture is at the 32.5° position.

INITIALIZATION

NOTE: If the VERB display on the DSKY contains a number from 11 through 17, the KEY REL indicator may flash when DSKY entries are made.

NOTE: The CMC warning lamp on the Indicator Control panel may light for approximately 10 seconds when +28 VDC CMC Operate power is applied.

1. Insure the OIA ON/ISS POWER DISABLED and the PROCEED portion of the PROCEED/ISS STANDBY pushbuttons on the Test Control panel are lighted.

2. Press the CGC/LGC POWER ON and the 400 CPS POWER ON pushbuttons to apply power to the CGC and provide DSKY illumination. The pushbuttons shall light.

VERIFICATION WITH SIDL REQUIRED BEFORE USE

---

3. If STBY condition lamp on DSKY is lighted, press and hold PRO (or STBY) pushbutton until lamp goes out. If lamp does not go out within 5 seconds, release and press pushbutton again. If pushbutton is pressed more than once, record in the System log the number of times pressed. Press RSET and perform the following DSKY operations:

a. VERB 61 ENTR
b. VERB 36 ENTR
c. Press ALARM RESET pushbutton on Programmer and Monitor panel of CTS.

4. Press the PROCEED/ISS STANDBY pushbutton. The PROCEED lamp shall go out and the ISS STANDBY lamp shall light.

5. Insure that the PSA HTR PWR lamp on the Temperature Monitor panel is lighted.

6. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 175. Adjust the G & N POWER ADJUST until the DVM indicates 28.8 (±0.25) vdc. Record indication.

IMU TIME DELAY

7. Deleted.

8. Deleted.

9. Deleted.

10. Perform the following DSKY operations:

a. VERB 36 ENTR
b. VERB 11 NOUN 10 ENTR
c. 00012 ENTR

11. Set switches and controls on the Counter as follows:

DISPLAY RESET to ZERO
CLOCK FREQUENCY DIVIDER to 10^4
CLOCK SELECTOR to INT
INPUT SELECTOR to C SENSE
SENSE SELECTOR to FWD
FUNCTION to COUNT

12. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 259.

13. Simultaneously press the RESET pushbutton on the Counter and the PROCEED/ISS OPERATE pushbutton on the Test Control panel. The NO ATT lamp on the DSKY shall light. Observe the absence of +120 vdc on the DVM.

14. Set the FUNCTION selector on the Counter to OFF immediately after the DSKY display changes from 00030 to 40000 and observe the voltage on the DVM indicates +120 vdc within 10 seconds. The NO ATT lamp on the DSKY shall go out.

15. Record the time displayed on the Counter.

16. Perform the following DSKY operations:

a. VERB 40 NOUN 20 ENTR
b. Wait 5 seconds.
c. VERB 36 ENTR
d. VERB 41 NOUN 20 ENTR
e. Observe
VERB 21 NOUN 22 Flashing
f. +09000 ENTR
g. Observe
VERB 22 NOUN 22 Flashing
h. +09000 ENTR
i. Observe
VERB 23 NOUN 22 Flashing
j. +09000 ENTR
k. Observe
NO ATT lamp lights

The GIMBAL LOCK lamps on the DSKY and the Monitor panel shall light. Press the PROCEED/ISS STANDBY pushbutton on the Test Control panel. The ISS STANDBY portion shall light and the PROCEED/ISS OPERATE pushbutton shall go out.

17. Perform the following DSKY operations:

a. VERB 06 NOUN 20 ENTR
b. Observe the DSKY registers display
Row 1 approximately +09000
Row 2 approximately +09000
Row 3 approximately +09000

18. Set CHANNELS 3, 4, 5, and 6 of the Oscillograph Signal Selector panel to monitor the following signals:

a. Accel Temperature on CHANNEL 3-3.

b. IRIG Temperature on CHANNEL 4-3.

c. IMU Heater Discrete on CHANNEL 5-15.

d. IMU Blower Discrete on CHANNEL 6-15.

19. Insure that the CH 3 DC, CH 4 DC, CH 5 DC and CH 6 AC pushbuttons on the Oscillograph Signal Selector panel are lighted.

20. Connect a jumper from TPA #2 TB4-21 (hi) and TPA #2 TB5-22 (lo) to TPA #2 DIRECT PROBES J9 (hi) and J10 (lo) respectively.

21. Connect a jumper from PROBES OUTPUT, DIRECT to CH-5, IN-DC on the Auxiliary Input Panel.

22. Connect jumpers from TPA #2 TB4-30 (hi) and TPA #2 TB5-33 (lo) to CH 6, IN-AC on the Auxiliary Input Panel.

23. Zero and calibrate CHANNEL 3, 4, and 5 on the Oscillograph Amplifier. CHANNEL 6 may be calibrated after step 35.

24. Mark the Oscillograph Channels as follows:

a. CHANNEL 3 "start of PIPA TEMP stability test"

b. CHANNEL 4 "start of IRIG TEMP stability test"

c. CHANNEL 5 "start of IMU Heater Discrete"

d. CHANNEL 6 "start of IMU Blower Discrete"

25. Set sensitivity on Oscillograph Amplifier for CHANNEL 3 to .2 V/CM, CHANNEL 4 to 2 V/CM, CHANNEL 5 to 20 V/CM, and CHANNEL 6 to 2 V/MM. Set CHART SPEEDS to 1 and CHART DRIVE to MM/SEC on Oscillograph Control panel.

NOTE: Read and understand steps 26 through 49 noting that steps 39 and 40 shall be performed 15 and 30 minutes respectively after step 31.

TURN-ON CAGE TEST

26. Perform the following DSKY operations:

a. VERB 11 NOUN 10 ENTR
b. 00012 ENTR

---

27. Allow the PIPA temperature to stabilize as indicated by a voltage change of 0.05 volt or less over a one hour period on CHANNEL 3.

28. Measure and record PIPA temperature deviation on DVM by setting CROSSBAR CONTROL on Primary Signal Selector panel to 255.

29. Measure and record IRIG temperature deviation on DVM by setting CROSSBAR CONTROL to 156.

30. Press the PROCEED/ISS OPERATE pushbutton on the Test Control panel. The NO ATT lamp on the DSKY shall light.

31. Press the EVENT MARKER on the Oscillograph Control panel immediately after step 30 and record the time.

32. Verify and record by observing the PIPA Monitor Scope that no PIPA torquing is present until after the DSKY display changes from 00030 to 40000 to 00000. The NO ATT lamp shall be not lighted.

33. Press the EVENT MARKER on the Oscillograph Control panel immediately after the DSKY display changes from 00030 to 40000 to 00000.

34. After the DSKY display changes from 00030 to 40000 to 00000, perform the following DSKY operation:

a. VERB 16 NOUN 20 ENTR

35. Record the OG, MG, and IG positions as indicated on the Gimbal Position Control panel and as indicated on the DSKY displays. All axes shall indicate approximately 000.00°.

1X SIN AND COS SIGNALS

36. Perform the following DSKY operations:

a. VERB 40 NOUN 20 ENTR
b. Wait 5 seconds.
c. VERB 41 NOUN 20 ENTR
d. Observe
VERB 21 NOUN 22 Flashing
e. +00000 ENTR
f. Observe
VERB 22 NOUN 22 Flashing
g. +00000 ENTR
h. Observe
VERB 23 NOUN 22 Flashing
i. +00000 ENTR
j. Observe
NO ATT lamp lights.

37. Set the PAVM FUNCTION selector to TOTAL and measure the following signals on the highest usable sensitivity of the meters. Record indications:

Signal	CROSSBAR CONTROL
a. Cos A_{OG} 1X	241
b. Cos A_{MG} 1X	242
c. Cos A_{IG} 1X	243
d. Sin A_{OG} 1X	142
e. Sin A_{MG} 1X	143
f. Sin A_{IG} 1X	144

38. Set the CROSSBAR CONTROL to 220. Adjust the G & N POWER ADJUST control until the DVM indicates 28.00 (±0.25) vdc.

STANDBY TO OPERATE TEMPERATURE TRANSIENT

39. 15 minutes after performing step 31, press EVENT MARKER on Oscillograph Control panel and record the time. Immediately set CROSSBAR CONTROL to 255 and measure and record PIPA temperature deviation as indicated on DVM.

40. 30 minutes after performing step 31, press EVENT MARKER on Oscillograph Control panel and record the time. Immediately set CROSSBAR CONTROL to 156 and measure and record IRIG temperature deviation as indicated on DVM.

PSA THERMISTOR

41. Measure the 800 CPS P/S temperature thermistor resistance across pins TB5-12 and TB5-13 on TPA #2. Use a 10K ohm resistor in series with one of the measuring probes. Subtract the resistance of the 10K resistor from the measured resistance. Record indication.

TEMP MON 1 THERMISTOR

42. Measure the Temp Mon 1 thermistor resistance across pins TB5-14 and TB5-15 of TPA #2. Use a 10K ohm resistor in series with one of the measuring probes. Subtract the resistance of the 10K resistor from the measured resistance. Record indication.

PIPA CAL. MOD. THERMISTOR

43. Measure the PIPA Cal. Mod. thermistor resistance across TB1-31 and TB1-27 on TPA #2. Use a 10K ohm resistor in series with one of the measuring probes. Subtract the resistance of the 10K resistor from the measured resistance. Record indication.

IMU CAGE

44. Perform the following DSKY operations

a. VERB 40 NOUN 20 ENTR
b. Wait 5 seconds
c. VERB 41 NOUN 20 ENTR
d. Observe
VERB 21 NOUN 22 Flashing
e. +00200 ENTR
f. Observe
VERB 22 NOUN 22 Flashing
g. +00200 ENTR
h. Observe
VERB 23 NOUN 22 Flashing
i. +00200 ENTR
j. Observe
NO ATT lights
k. VERB 16 NOUN 20 ENTR

45. When the DSKY registers display
Row 1 approximately +00200
Row 2 approximately +00200
Row 3 approximately +00200

Enter VERB 34 into the DSKY and press the ENTR pushbutton. Press and hold the IMU CAGE COMMAND pushbutton on the Test Control Panel.

46. Set the PAVM FUNCTION selector to TOTAL and measure the following signals on the highest usable sensitivity of the meters. Record the indications:

Signal	CROSSBAR CONTROL
a. Sin A_{OG} 1X	142
b. Sin A_{MG} 1X	143
c. Sin A_{IG} 1X	144

47. Release the IMU CAGE COMMAND pushbutton on the Test Control Panel and perform the following DSKY operations:

a. VERB 01 NOUN 10 ENTR
b. 00012 ENTR

48. Record the display of Row 1. Enter VERB 36 and press the ENTR pushbutton.

INERTIAL TEMPERATURE CONTROL POINT

48A. Perform the following DSKY operations:

a. VERB 40 NOUN 20 ENTR
b. Wait 5 seconds.
c. VERB 41 NOUN 20 ENTR
d. Observe
VERB 21 NOUN 22 Flashing
e. +00000 ENTR
f. Observe
VERB 22 NOUN 22 Flashing
g. +00000 ENTR
h. Observe
VERB 23 NOUN 22 Flashing
i. +00000 ENTR
j. Observe
NO ATT lamp lights.

49. Allow the PIPA and IRIG temperatures to stabilize as indicated by a voltage change of 0.05 volt or less over a one hour period as monitored on Oscillograph. Stabilization should occur within 2 hours after performance of step 31. Set CROSSBAR CONTROL to 255 and measure and record PIPA temperature deviation as indicated on DVM. Set CROSSBAR CONTROL to 156 and measure and record IRIG temperature deviation as indicated on DVM. Stop Oscillograph.

50. Compare the PIPA temperature deviation recorded in step 28 with the PIPA temperature deviation recorded in step 49. Calculate and record the difference.

51. Determine from the Oscillograph chart the maximum PIPA temperature deviation that occurred during the 15 minute period between performance of step 31 and step 39.

52. Compare the PIPA temperature deviation recorded in step 39 with the PIPA temperature deviation recorded in step 49. Calculate and record the difference.

53. Compare the IRIG temperature deviation recorded in step 40 with the IRIG temperature deviation recorded in step 49. Calculate and record the difference.

HEATER TELEMETRY DISCRETE

54. Record the maximum and minimum voltage indicated on CHANNEL 5.

BLOWER TELEMETRY DISCRETE

55. Record the maximum and/or minimum voltage indicated on CHANNEL 6 or both if the blower is cycling.

MASTER ALARM TEST

56. Press the INTERFACE LOAD TEST pushbutton on the Test Selector panel and set the INTERFACE LOAD TEST selector to 1.

57. Press the TEST START pushbutton.

58. Observe and record that the MASTER ALARM pushbutton on the Indicator Control panel lights.

59. Press the TEST STOP and INTERFACE LOAD TEST pushbuttons on the Test Selector panel. The MASTER ALARM pushbutton shall go out. Set the INTERFACE LOAD TEST selector to OFF.

60. Press the CONTINUITY TEST pushbutton on the Test Selector panel and set the CONTINUITY TEST selector to 10.

61. Set and hold the CONDITION LAMPS switch on the Indicator Control panel to TEST until completion of step 62.

62. Press the MASTER ALARM pushbutton. Observe and record that the pushbutton lights. The STAR ACQ lamp will light. Set CONDITION LAMPS switch to ON.

63. Press the CONTINUITY TEST pushbutton on the Test Selector panel. Set the CONTINUITY TEST selector to OFF.

64. Observe and record that the electroluminescent lighting on the Indicator Control panel is lighted.

65. Perform the following DSKY operation:

IMPORTANT
See below.

INTERVAL

TOOLS AND MATERIAL

IMPORTANT: 1. Adjust Coolant Console TEMP controls as necessary to keep the GDB temperature meter nulled within the tolerances of step 10 of JDC 12203.

2. Oscillograph sensitivities given in this JDC are nominal values to be used only as a guide. Operator may change sensitivities as required.

CAUTION: Use extreme care when tilting G&N Mounting Fixture to insure that components do not strike cradle locking handles.

3. Insure that the G & N Mounting Fixture is at the 32.5° position.

INITIALIZATION

NOTE: If the VERB display on the DSKY contains a number from 11 through 17, the KEY REL indicator may flash when DSKY entries are made.

NOTE: The CMC warning lamp on the Indicator Control panel may light for approximately 10 seconds when +28 VDC CMC Operate power is applied.

1. Insure the OIA ON/ISS POWER DISABLED and the PROCEED portion of the

VERIFICATION WITH SIDL REQUIRED BEFORE USE

SUBSYSTEM G & N SYSTEM

ASSY

PROCEED/ISS STANDBY pushbuttons on the Test Control panel are lighted.

2. Press the CGC/LGC POWER ON and the 400 CPS POWER ON pushbuttons to apply power to the CGC and provide DSKY illumination. The pushbuttons shall light.

3. If STBY condition lamp on DSKY is lighted, press and hold PRO (or STBY) pushbutton until lamp goes out. If lamp does not go out within 5 seconds, release and press pushbutton again. If pushbutton is pressed more than once, record in the System log the number of times pressed. Press RSET and perform the following DSKY operations:

a. VERB 61		ENTR	
b. VERB 36		ENTR	

c. Press ALARM RESET pushbutton on Programmer and Monitor panel of CTS.

4. Press the PROCEED/ISS STANDBY pushbutton. The PROCEED lamp shall go out and the ISS STANDBY lamp shall light.

5. Insure that the PSA HTR PWR lamp on the Temperature Monitor panel is lighted.

6. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 175. Adjust the G & N POWER ADJUST until the DVM indicates 28.8 (±0.25) vdc. Record indication.

IMU TIME DELAY

7. Deleted.

8. Deleted.

9. Deleted.

10. Perform the following DSKY operations:

a. VERB 36		ENTR
b. VERB 11	NOUN 10	ENTR
c. 00012		ENTR

11. Set switches and controls on the Counter as follows:

DISPLAY RESET to ZERO
CLOCK FREQUENCY DIVIDER to 10^4
CLOCK SELECTOR to INT
INPUT SELECTOR to C SENSE
SENSE SELECTOR to FWD
FUNCTION to COUNT

12. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 259.

13. Simultaneously press the RESET pushbutton on the Counter and the PROCEED/ISS OPERATE pushbutton on the Test Control panel. The NO ATT lamp on the DSKY shall light. Observe the absence of +120 vdc on the DVM.

14. Set the FUNCTION selector on the Counter to OFF immediately after the DSKY display changes from 00030 to 40000 and observe the voltage on the DVM indicates +120 vdc within 10 seconds. The NO ATT lamp on the DSKY shall go out.

15. Record the time displayed on the Counter.

16. Perform the following DSKY operations:

a. VERB 40	NOUN 20	ENTR
b. Wait 5 seconds.		
c. VERB 36		ENTR
d. VERB 41	NOUN 20	ENTR
e. Observe		
VERB 21	NOUN 22	Flashing
f. +09000		ENTR
g. Observe		
VERB 22	NOUN 22	Flashing

VERB 23	NOUN 22	Flashing
j. +09000		ENTR
k. Observe		

NO ATT lamp lights

The GIMBAL LOCK lamps on the DSKY and the Monitor panel shall light. Press the PROCEED/ISS STANDBY pushbutton on the Test Control panel. The ISS STANDBY portion shall light and the PROCEED/ISS OPERATE pushbutton shall go out.

17. Perform the following DSKY operations:

a. VERB 06 NOUN 20 ENTR

b. Observe the DSKY registers display
Row 1 approximately +09000
Row 2 approximately +09000
Row 3 approximately +09000

18. Set CHANNELS 3, 4, 5, and 6 of the Oscillograph Signal Selector panel to monitor the following signals:

a. Accel Temperature on CHANNEL 3-3.

b. IRIG Temperature on CHANNEL 4-3.

c. IMU Heater Discrete on CHANNEL 5-15.

d. IMU Blower Discrete on CHANNEL 6-15.

19. Insure that the CH 3 DC, CH 4 DC, CH 5 DC and CH 6 AC pushbuttons on the Oscillograph Signal Selector panel are lighted.

20. Connect a jumper from TPA #2 TB4-21 (hi) and TPA #2 TB5-22 (lo) to TPA #2 DIRECT PROBES J9 (hi) and J10 (lo) respectively.

21. Connect a jumper from PROBES OUTPUT, DIRECT to CH-5, IN-DC on the Auxiliary Input Panel.

22. Connect jumpers from TPA #2 TB4-20 (hi) and TPA #2 TB5-33 (lo) to CH 6, IN-AC on the Auxiliary Input Panel.

23. Zero and calibrate CHANNEL 3, 4, and 5 on the Oscillograph Amplifier. CHANNEL 6 may be calibrated after step 35.

24. Mark the Oscillograph Channels as follows:

a. CHANNEL 3 "start of PIPA TEMP stability test"

b. CHANNEL 4 "start of IRIG TEMP stability test"

c. CHANNEL 5 "start of IMU Heater Discrete"

d. CHANNEL 6 "start of IMU Blower Discrete"

25. Set sensitivity on Oscillograph Amplifier for CHANNEL 3 to .2 V/CM, CHANNEL 4 to 2 V/CM, CHANNEL 5 to 20 V/CM, and CHANNEL 6 to 2 V/MM. Set CHART SPEEDS to 1 and CHART DRIVE to MM/SEC on Oscillograph Control panel.

NOTE: Read and understand steps 26 through 49 noting that steps 39 and 40 shall be performed 15 and 30 minutes respectively after step 31.

TURN-ON CAGE TEST

26. Perform the following DSKY operations:

a. VERB 11	NOUN 10	ENTR
b. 00012		ENTR

27. Allow the PIPA temperature to stabilize as indicated by a voltage change of 0.05 volt or less over a one hour period on CHANNEL 3.

28. Measure and record PIPA temperature deviation on DVM by setting CROSSBAR CONTROL on Primary Signal Selector panel to 255.

29. Measure and record IRIG temperature deviation on DVM by setting CROSSBAR CONTROL to 156.

30. Press the PROCEED/ISS OPERATE pushbutton on the Test Control panel. The NO ATT lamp on the DSKY shall light.

31. Press the EVENT MARKER on the Oscillograph Control panel immediately after step 30 and record the time.

32. Verify and record by observing the PIPA Monitor Scope that no PIPA torquing is present until after the DSKY display changes from 00030 to 40000 to 00000. The NO ATT lamp shall be not lighted.

33. Press the EVENT MARKER on the Oscillograph Control panel immediately after the DSKY display changes from 00030 to 40000 to 00000.

34. After the DSKY display changes from 00030 to 40000 to 00000, perform the following DSKY operation:

a. VERB 16	NOUN 20	ENTR

35. Record the OG, MG, and IG positions as indicated on the Gimbal Position Control panel and as indicated on the DSKY displays. All axes shall indicate approximately 000.00°.

1X SIN AND COS SIGNALS

36. Perform the following DSKY operations:

a. VERB 40	NOUN 20	ENTR
b. Wait 5 seconds.		
c. VERB 41	NOUN 20	ENTR
d. Observe		
VERB 21	NOUN 22	Flashing

VERB 22	NOUN 22	Flashing
g. +00000		ENTR
h. Observe		
VERB 23	NOUN 22	Flashing
i. +00000		ENTR
j. Observe		

NO ATT lamp lights.

37. Set the PAVM FUNCTION selector to TOTAL and measure the following signals on the highest usable sensitivity of the meters. Record indications:

Signal	CROSSBAR CONTROL
a. Cos A_{OG} 1X	241
b. Cos A_{MG} 1X	242
c. Cos A_{IG} 1X	243
d. Sin A_{OG} 1X	142
e. Sin A_{MG} 1X	143
f. Sin A_{IG} 1X	144

38. Set the CROSSBAR CONTROL to 220. Adjust the G & N POWER ADJUST control until the DVM indicates 28.00 (±0.25) vdc.

DATE 30 JUN 66

STANDBY TO OPERATE TEMPERATURE TRANSIENT

39. 15 minutes after performing step 31, press EVENT MARKER on Oscillograph Control panel and record the time. Immediately set CROSSBAR CONTROL to 255 and measure and record PIPA temperature deviation as indicated on DVM.

40. 30 minutes after performing step 31, press EVENT MARKER on Oscillograph Control panel and record the time. Immediately set CROSSBAR CONTROL to 156 and measure and record IRIG temperature deviation as indicated on DVM.

PSA THERMISTOR

41. Measure the 800 CPS P/S temperature thermistor resistance across pins TB5-12 and TB5-13 on TPA #2. Use a 10K ohm resistor in series with one of the measuring probes. Subtract the resistance of the 10K resistor from the measured resistance. Record indication.

TEMP MON 1 THERMISTOR

42. Measure the Temp Mon 1 thermistor resistance across pins TB5-14 and TB5-15 of TPA #2. Use a 10K ohm resistor in series with one of the measuring probes. Subtract the resistance of the 10K resistor from the measured resistance. Record indication.

PIPA CAL. MOD. THERMISTOR

43. Measure the PIPA Cal. Mod. thermistor resistance across TB1-31 and TB1-27 on TPA #2. Use a 10K ohm resistor in series with one of the measuring probes. Subtract the resistance of the 10K resistor from the measured resistance. Record indication.

IMU CAGE

44. Perform the following DSKY operations:

a. VERB 40 NOUN 20 ENTR
b. Wait 5 seconds
c. VERB 41 NOUN 20 ENTR

k. VERB 16 NOUN 20 ENTR

45. When the DSKY registers display
Row 1 approximately +00200
Row 2 approximately +00200
Row 3 approximately +00200

Enter VERB 34 into the DSKY and press the ENTR pushbutton. Press and hold the IMU CAGE COMMAND pushbutton on the Test Control Panel.

46. Set the PAVM FUNCTION selector to TOTAL and measure the following signals on the highest usable sensitivity of the meters. Record the indications:

Signal	CROSSBAR CONTROL
a. Sin A_{OG} 1X	142
b. Sin A_{MG} 1X	143
c. Sin A_{IG} 1X	144

47. Release the IMU CAGE COMMAND pushbutton on the Test Control Panel and perform the following DSKY operations:

a. VERB 01 NOUN 10 ENTR
b. 00012 ENTR

48. Record the display of Row 1. Enter VERB 36 and press the ENTR pushbutton.

INERTIAL TEMPERATURE CONTROL POINT

48A. Perform the following DSKY operations:

a. VERB 40 NOUN 20 ENTR
b. Wait 5 seconds.
c. VERB 41 NOUN 20 ENTR
d. Observe
VERB 21 NOUN 22 Flashing
e. +00000 ENTR
f. Observe
VERB 22 NOUN 22 Flashing
g. +00000 ENTR
h. Observe
VERB 23 NOUN 22 Flashing
i. +00000 ENTR
j. Observe
NO ATT lamp lights.

49. Allow the PIPA and IRIG temperatures to stabilize as indicated by a voltage change of 0.05 volt or less over a one hour period as monitored on Oscillograph. Stabilization should occur within 2 hours after performance of step 31. Set CROSSBAR CONTROL to 255 and measure and record PIPA temperature deviation as indicated on DVM. Set CROSSBAR CONTROL to 156 and measure and record IRIG temperature deviation as indicated on DVM. Stop Oscillograph.

50. Compare the PIPA temperature deviation recorded in step 28 with the PIPA temperature deviation recorded in step 49. Calculate and record the difference.

51. Determine from the Oscillograph chart the maximum PIPA temperature deviation that occurred during the 15 minute period between performance of step 31 and step 39.

52. Compare the PIPA temperature deviation recorded in step 39 with the PIPA temperature deviation recorded in step 49. Calculate and record the difference.

53. Compare the IRIG temperature deviation recorded in step 40 with the IRIG temperature deviation recorded in step 49. Calculate and record the difference.

HEATER TELEMETRY DISCRETE

54. Record the maximum and minimum voltage indicated on CHANNEL 5.

BLOWER TELEMETRY DISCRETE

55. Record the maximum and/or minimum voltage indicated on CHANNEL 6 or both if the blower is cycling.

MASTER ALARM TEST

56. Press the INTERFACE LOAD TEST pushbutton on the Test Selector panel and set the INTERFACE LOAD TEST selector to 1.

---

57. Press the TEST START pushbutton.

58. Observe and record that the MASTER ALARM pushbutton on the Indicator Control panel lights.

59. Press the TEST STOP and INTERFACE LOAD TEST pushbuttons on the Test Selector panel. The MASTER ALARM pushbutton shall go out. Set the INTERFACE LOAD TEST selector to OFF.

60. Press the CONTINUITY TEST pushbutton on the Test Selector panel and set the CONTINUITY TEST selector to 10.

61. Set and hold the CONDITION LAMPS switch on the Indicator Control panel to TEST until completion of step 62.

62. Press the MASTER ALARM pushbutton. Observe and record that the pushbutton lights. The STAR ACQ lamp will light. Set CONDITION LAMPS switch to ON.

63. Press the CONTINUITY TEST pushbutton on the Test Selector panel. Set the CONTINUITY TEST selector to OFF.

64. Observe and record that the electroluminescent lighting on the Indicator Control panel is lighted.

65. Perform the following DSKY operation:

IMPORTANT
See below.

INTERVAL

TOOLS AND MATERIAL

IMPORTANT: 1. Adjust Coolant Console TEMP controls as necessary to keep the GDB temperature meter nulled within the tolerances of step 10 of JDC 12203.

2. Oscillograph sensitivities given in this JDC are nominal values to be used only as a guide. Operator may change sensitivities as required.

CAUTION: Use extreme care when tilting G&N Mounting Fixture to insure that components do not strike cradle locking handles.

3. Insure that the G & N Mounting Fixture is at the 32.5° position.

INITIALIZATION

NOTE: If the VERB display on the DSKY contains a number from 11 through 17, the KEY REL indicator may flash when DSKY entries are made.

NOTE: The CMC warning lamp on the Indicator Control panel may light for approximately 10 seconds when +28 VDC CMC Operate power is applied.

1. Insure the OIA ON/ISS POWER DISABLED and the PROCEED portion of the

VERIFICATION WITH SIDL REQUIRED BEFORE USE

PROCEED/ISS STANDBY pushbuttons on the Test Control panel are lighted.

2. Press the CGC/LGC POWER ON and the 400 CPS POWER ON pushbuttons to apply power to the CGC and provide DSKY illumination. The pushbuttons shall light.

3. If STBY condition lamp on DSKY is lighted, press and hold PRO (or STBY) pushbutton until lamp goes out. If lamp does not go out within 5 seconds, release and press pushbutton again. If pushbutton is pressed more than once, record in the System log the number of times pressed. Press RSET and perform the following DSKY operations:

a.	VERB 61		ENTR
b.	VERB 36		ENTR

c. Press ALARM RESET pushbutton on Programmer and Monitor panel of CTS.

4. Press the PROCEED/ISS STANDBY pushbutton. The PROCEED lamp shall go out and the ISS STANDBY lamp shall light.

5. Insure that the PSA HTR PWR lamp on the Temperature Monitor panel is lighted.

6. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 175. Adjust the G & N POWER ADJUST until the DVM indicates 28.8 (±0.25) vdc. Record indication.

IMU TIME DELAY

7. Deleted.

8. Deleted.

9. Deleted.

10. Perform the following DSKY operations:

a.	VERB 36		ENTR
b.	VERB 11	NOUN 10	ENTR
c.	00012		ENTR

11. Set switches and controls on the Counter as follows:

DISPLAY RESET to ZERO
CLOCK FREQUENCY DIVIDER to 10^4
CLOCK SELECTOR to INT
INPUT SELECTOR to C SENSE
SENSE SELECTOR to FWD
FUNCTION to COUNT

12. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 259.

13. Simultaneously press the RESET pushbutton on the Counter and the PROCEED/ISS OPERATE pushbutton on the Test Control panel. The NO ATT lamp on the DSKY shall light. Observe the absence of +120 vdc on the DVM.

14. Set the FUNCTION selector on the Counter to OFF immediately after the DSKY display changes from 00030 to 40000 and observe the voltage on the DVM indicates +120 vdc within 10 seconds. The NO ATT lamp on the DSKY shall go out.

15. Record the time displayed on the Counter.

16. Perform the following DSKY operations:

a.	VERB 40	NOUN 20	ENTR
b.	Wait 5 seconds.		
c.	VERB 36		ENTR
d.	VERB 41	NOUN 20	ENTR
e.	Observe		
	VERB 21	NOUN 22	Flashing
f.	+09000		ENTR
g.	Observe		
	VERB 22	NOUN 22	Flashing

---

h.	+09000		ENTR
i.	Observe		
	VERB 23	NOUN 22	Flashing
j.	+09000		ENTR
k.	Observe		
	NO ATT lamp lights		

The GIMBAL LOCK lamps on the DSKY and the Monitor panel shall light. Press the PROCEED/ISS STANDBY pushbutton on the Test Control panel. The ISS STANDBY portion shall light and the PROCEED/ISS OPERATE pushbutton shall go out.

17. Perform the following DSKY operations:

a. VERB 06 NOUN 20 ENTR

b. Observe the DSKY registers display
   - Row 1 approximately +09000
   - Row 2 approximately +09000
   - Row 3 approximately +09000

18. Set CHANNELS 3, 4, 5, and 6 of the Oscillograph Signal Selector panel to monitor the following signals:

a. Accel Temperature on CHANNEL 3-3.

b. IRIG Temperature on CHANNEL 4-3.

c. IMU Heater Discrete on CHANNEL 5-15.

d. IMU Blower Discrete on CHANNEL 6-15.

19. Insure that the CH 3 DC, CH 4 DC, CH 5 DC and CH 6 AC pushbuttons on the Oscillograph Signal Selector panel are lighted.

20. Connect a jumper from TPA #2 TB4-21 (hi) and TPA #2 TB5-22 (lo) to TPA #2 DIRECT PROBES J9 (hi) and J10 (lo) respectively.

21. Connect a jumper from PROBES OUTPUT, DIRECT to CH-5, IN-DC on the Auxiliary Input Panel.

22. Connect jumpers from TPA #2 TB4-30 (hi) and TPA #2 TB5-33 (lo) to CH 6, IN-AC on the Auxiliary Input Panel.

23. Zero and calibrate CHANNEL 3, 4, and 5 on the Oscillograph Amplifier. CHANNEL 6 may be calibrated after step 35.

24. Mark the Oscillograph Channels as follows:

a. CHANNEL 3 "start of PIPA TEMP stability test"

b. CHANNEL 4 "start of IRIG TEMP stability test"

c. CHANNEL 5 "start of IMU Heater Discrete"

d. CHANNEL 6 "start of IMU Blower Discrete"

25. Set sensitivity on Oscillograph Amplifier for CHANNEL 3 to .2 V/CM, CHANNEL 4 to 2 V/CM, CHANNEL 5 to 20 V/CM, and CHANNEL 6 to 2 V/MM. Set CHART SPEEDS to 1 and CHART DRIVE to MM/SEC on Oscillograph Control panel.

NOTE: Read and understand steps 26 through 49 noting that steps 39 and 40 shall be performed 15 and 30 minutes respectively after step 31.

TURN-ON CAGE TEST

26. Perform the following DSKY operations:

a.	VERB 11	NOUN 10	ENTR
b.	00012		ENTR

27. Allow the PIPA temperature to stabilize as indicated by a voltage change of 0.05 volt or less over a one hour period on CHANNEL 3.

28. Measure and record PIPA temperature deviation on DVM by setting CROSSBAR CONTROL on Primary Signal Selector panel to 255.

29. Measure and record IRIG temperature deviation on DVM by setting CROSSBAR CONTROL to 156.

30. Press the PROCEED/ISS OPERATE pushbutton on the Test Control panel. The NO ATT lamp on the DSKY shall light.

31. Press the EVENT MARKER on the Oscillograph Control panel immediately after step 30 and record the time.

32. Verify and record by observing the PIPA Monitor Scope that no PIPA torquing is present until after the DSKY display changes from 00030 to 40000 to 00000. The NO ATT lamp shall be not lighted.

33. Press the EVENT MARKER on the Oscillograph Control panel immediately after the DSKY display changes from 00030 to 40000 to 00000.

34. After the DSKY display changes from 00030 to 40000 to 00000, perform the following DSKY operation:

a. VERB 16 NOUN 20 ENTR

35. Record the OG, MG, and IG positions as indicated on the Gimbal Position Control panel and as indicated on the DSKY displays. All axes shall indicate approximately 000.00°.

1X SIN AND COS SIGNALS

36. Perform the following DSKY operations:

a.	VERB 40	NOUN 20	ENTR
b.	Wait 5 seconds.		
c.	VERB 41	NOUN 20	ENTR
d.	Observe		
	VERB 21	NOUN 22	Flashing
e.	+00000		ENTR
f.	Observe		
	VERB 22	NOUN 22	Flashing
g.	+00000		ENTR
h.	Observe		
	VERB 23	NOUN 22	Flashing
i.	+00000		ENTR
j.	Observe		
	NO ATT lamp lights.		

37. Set the PAVM FUNCTION selector to TOTAL and measure the following signals on the highest usable sensitivity of the meters. Record indications:

	Signal	CROSSBAR CONTROL
a.	Cos A_{OG} 1X	241
b.	Cos A_{MG} 1X	242
c.	Cos A_{IG} 1X	243
d.	Sin A_{OG} 1X	142
e.	Sin A_{MG} 1X	143
f.	Sin A_{IG} 1X	144

38. Set the CROSSBAR CONTROL to 220. Adjust the G & N POWER ADJUST control until the DVM indicates 28.00 (±0.25) vdc.

STANDBY TO OPERATE TEMPERATURE TRANSIENT

39. 15 minutes after performing step 31, press EVENT MARKER on Oscillograph Control panel and record the time. Immediately set CROSSBAR CONTROL to 255 and measure and record PIPA temperature deviation as indicated on DVM.

40. 30 minutes after performing step 31, press EVENT MARKER on Oscillograph Control panel and record the time. Immediately set CROSSBAR CONTROL to 156 and measure and record IRIG temperature deviation as indicated on DVM.

PSA THERMISTOR

41. Measure the 800 CPS P/S temperature thermistor resistance across pins TB5-12 and TB5-13 on TPA #2. Use a 10K ohm resistor in series with one of the measuring probes. Subtract the resistance of the 10K resistor from the measured resistance. Record indication.

TEMP MON 1 THERMISTOR

42. Measure the Temp Mon 1 thermistor resistance across pins TB5-14 and TB5-15 of TPA #2. Use a 10K ohm resistor in series with one of the measuring probes. Subtract the resistance of the 10K resistor from the measured resistance. Record indication.

PIPA CAL. MOD. THERMISTOR

43. Measure the PIPA Cal. Mod. thermistor resistance across TB1-31 and TB1-27 on TPA #2. Use a 10K ohm resistor in series with one of the measuring probes. Subtract the resistance of the 10K resistor from the measured resistance. Record indication.

IMU CAGE

44. Perform the following DSKY operations:

a. VERB 40 NOUN 20 ENTR
b. Wait 5 seconds
c. VERB 41 NOUN 20 ENTR
d. Observe
VERB 21 NOUN 22 Flashing
e. +00200 ENTR
f. Observe
VERB 22 NOUN 22 Flashing
g. +00200 ENTR
h. Observe
VERB 23 NOUN 22 Flashing
i. +00200 ENTR
j. Observe
NO ATT lights
k. VERB 16 NOUN 20 ENTR

45. When the DSKY registers display,
Row 1 approximately +00200
Row 2 approximately +00200
Row 3 approximately +00200

Enter VERB 34 into the DSKY and press the ENTR pushbutton. Press and hold the IMU CAGE COMMAND pushbutton on the Test Control Panel.

46. Set the PAVM FUNCTION selector to TOTAL and measure the following signals on the highest usable sensitivity of the meters. Record the indications:

Signal	CROSSBAR CONTROL
a. Sin A_{OG} 1X	142
b. Sin A_{MG} 1X	143
c. Sin A_{IG} 1X	144

47. Release the IMU CAGE COMMAND pushbutton on the Test Control Panel and perform the following DSKY operations:

a. VERB 01 NOUN 10 ENTR
b. 00012 ENTR

48. Record the display of Row 1. Enter VERB 36 and press the ENTR pushbutton.

INERTIAL TEMPERATURE CONTROL POINT

48A. Perform the following DSKY operations:

a. VERB 40 NOUN 20 ENTR
b. Wait 5 seconds.
c. VERB 41 NOUN 20 ENTR
d. Observe
VERB 21 NOUN 22 Flashing
e. +00000 ENTR
f. Observe
VERB 22 NOUN 22 Flashing
g. +00000 ENTR
h. Observe
VERB 23 NOUN 22 Flashing
i. +00000 ENTR
j. Observe
NO ATT lamp lights.

49. Allow the PIPA and IRIG temperatures to stabilize as indicated by a voltage change of 0.05 volt or less over a one hour period as monitored on Oscillograph. Stabilization should occur within 2 hours after performance of step 31. Set CROSSBAR CONTROL to 255 and measure and record PIPA temperature deviation as indicated on DVM. Set CROSSBAR CONTROL to 156 and measure and record IRIG temperature deviation as indicated on DVM. Stop Oscillograph.

50. Compare the PIPA temperature deviation recorded in step 28 with the PIPA temperature deviation recorded in step 49. Calculate and record the difference.

51. Determine from the Oscillograph chart the maximum PIPA temperature deviation that occurred during the 15 minute period between performance of step 31 and step 39.

52. Compare the PIPA temperature deviation recorded in step 39 with the PIPA temperature deviation recorded in step 49. Calculate and record the difference.

53. Compare the IRIG temperature deviation recorded in step 40 with the IRIG temperature deviation recorded in step 49. Calculate and record the difference.

HEATER TELEMETRY DISCRETE

54. Record the maximum and minimum voltage indicated on CHANNEL 5.

BLOWER TELEMETRY DISCRETE

55. Record the maximum and/or minimum voltage indicated on CHANNEL 6 or both if the blower is cycling.

MASTER ALARM TEST

56. Press the INTERFACE LOAD TEST pushbutton on the Test Selector panel and set the INTERFACE LOAD TEST selector to 1.

---

57. Press the TEST START pushbutton.

58. Observe and record that the MASTER ALARM pushbutton on the Indicator Control panel lights.

59. Press the TEST STOP and INTERFACE LOAD TEST pushbuttons on the Test Selector panel. The MASTER ALARM pushbutton shall go out. Set the INTERFACE LOAD TEST selector to OFF.

60. Press the CONTINUITY TEST pushbutton on the Test Selector panel and set the CONTINUITY TEST selector to 10.

61. Set and hold the CONDITION LAMPS switch on the Indicator Control panel to TEST until completion of step 62.

62. Press the MASTER ALARM pushbutton. Observe and record that the pushbutton lights. The STAR ACQ lamp will light. Set CONDITION LAMPS switch to ON.

63. Press the CONTINUITY TEST pushbutton on the Test Selector panel. Set the CONTINUITY TEST selector to OFF.

64. Observe and record that the electroluminescent lighting on the Indicator Control panel is lighted.

65. Perform the following DSKY operation:

IMU TIME DELAY

7. Set the Oscillograph Signal Selector panel to monitor the following signals:

a. Sin A_{OG} 1X	CHANNEL 2 - 7
b. Sin A_{MG} 1X	CHANNEL 3 - 7
c. Sin A_{IG} 1X	CHANNEL 4 - 7

8. Insure that the 800 ~ 0 PH REFERENCE and CH3AC and CH4AC pushbuttons on the Oscillograph Signal Selector panel are lighted.

9. Press the CHART SPEEDS 5 pushbutton on the Oscillograph Control panel and set the Channel 2, 3, and 4 sensitivity on the Oscillograph Amplifier panel to 50 MV/MM.

10. Perform the following DSKY operations:

a. VERB 36 ENTR

b. VERB 11 NOUN 10 ENTR

c. 00012 ENTR

11. Start the Oscillograph by setting the CHART DRIVE switch to MM/SEC.

12. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 259.

13. Press the PROCEED/ISS OPERATE pushbutton on the Test Control panel and the EVENT MARKER on the Oscillograph Control panel. The NO ATT lamp on the DSKY shall light. Observe the absence of +120 vdc on the DVM for approximately 90 seconds.

14. Press the EVENT MARKER on the Oscillograph Control panel immediately after the DSKY display changes from 00030 to 40000 to 00000 and observe the voltage on the DVM indicates +120 ±6 vdc within 10 seconds. The NO ATT lamp on the DSKY shall go out.

15. Stop the Oscillograph.

16. Perform the following DSKY operations:

a.	VERB 40	NOUN 20	ENTR
b.	Wait 5 seconds.		
c.	VERB 41	NOUN 20	ENTR
d.	Observe		
	VERB 21	NOUN 22	Flashing
e.	+22500		ENTR
f.	Observe		
	VERB 22	NOUN 22	Flashing
g.	+22500		ENTR
h.	Observe		
	VERB 23	NOUN 22	Flashing
i.	+22500		ENTR
j.	VERB 16	NOUN 20	ENTR
k.	Observe		
	NO ATT lamp lights.		

17. When the DSKY registers display:
Row 1 approximately +22500
Row 2 approximately +22500
Row 3 approximately +22500
The GIMBAL LOCK lamps on the DSKYs and the Monitor panel shall be lighted. Press the PROCEED/ISS STANDBY pushbutton on the Test Control panel. The ISS STANDBY portion shall light and the PROCEED/ISS OPERATE pushbutton shall go out.

JOB OPERATE CONTROL TEST

JDC 12207 REV - PAGE 3 OF 6

SUBSYSTEM G & N SYSTEM

ASSY

18. Set CHANNELS 3, 4, 5, and 6 of the Oscillograph Signal Selector panel to monitor the following signals:

a. Accel Temperature on CHANNEL 3-3 DC.

b. IRIG Temperature on CHANNEL 4-3 DC.

c. IMU Heater Discrete on CHANNEL 5 AUX.

d. IMU Blower Discrete on CHANNEL 6 AUX.

19. Insure that the CHANNEL 3 DC, CHANNEL 4 DC, CHANNEL 5 DC and CHANNEL 6 AC pushbuttons on the Oscillograph Signal Selector panel are lighted.

20. Connect a jumper from TPA #2 TB4-21 (hi) and TPA #2 TB5-22 (lo) to TPA #2 DIRECT PROBES J9 (hi) and J10 (lo) respectively.

21. Connect a jumper from PROBES OUTPUT, DIRECT to CH-5, IN-DC on the Auxiliary Input Panel.

22. Connect jumpers from TPA #2 TB4-20 (hi) and TPA #2 TB5-33 (lo) to CH 6, IN-AC on the Auxiliary Input Panel.

23. Zero and calibrate CHANNEL 3, 4, 5, and 6 on the Oscillograph Amplifier.

24. Mark the Oscillograph Channels as follows:

a. CHANNEL 3 "start of PIPA TEMP stability test"

b. CHANNEL 4 "start of IRIG TEMP stability test"

c. CHANNEL 5 "start of IMU Heater Discrete"

d. CHANNEL 6 "start of IMU Blower Discrete"

25. Set the CHART SPEEDS to 1, RANGE to 20 MV/MM and CHART DRIVE to MM/SEC on the Oscillograph Control for CHANNELS 3 and 4, and to 20 V/CM for CHANNELS 5 and 6.

NOTE: Read and understand steps 26 through 49 noting that steps 39 and 40 shall be performed 15 and 30 minutes respectively after step 31.

TURN-ON CAGE TEST

26. Perform the following DSKY operations:

a. VERB 11 NOUN 10 ENTR

b. 00012 ENTR

27. Allow the PIPA and IRIG temperatures to stabilize as indicated by a voltage change of 0.05 volt or less over a one hour period on CHANNELS 3 and 4. Record the average voltage indication for the stability period of CHANNELS 3 and 4.

28. Calculate and record the difference between the PIPA and IRIG voltage indications.

DATE __________

SUBSYSTEM G & N SYSTEM

ASSY

29. Start the Oscillograph by setting the CHART DRIVE switch to MM/SEC.

30. Press the PROCEED/ISS OPERATE pushbutton on the Test Control panel. The NO ATT lamp on the DSKY shall light.

31. Press the EVENT MARKER on the Oscillograph Control panel immediately after step 30 and record the time.

32. Verify and record by observing the PIPA Monitor Scope that no PIPA torquing is present until after the DSKY display changes from 00030 to 40000 to 00000. The NO ATT lamp shall be not lighted.

33. Press the EVENT MARKER on the Oscillograph Control panel immediately after the DSKY display changes from 00030 to 40000 to 00000.

34. After the DSKY display changes from 00030 to 40000 to 00000, perform the following DSKY operation:

a. VERB 16 NOUN 20 ENTER

35. Record the OG, MG, and IG positions as indicated on the Gimbal Position Control panel and as indicated on the DSKY displays. All axes shall indicate approximately 000.00°.

1X SIN AND COS SIGNALS

36. Set the PAVM FUNCTION selector to total and measure the following signals on the highest usable sensitivity of the meters. Record the indications:

Signal	CROSSBAR CONTROL
a. Cos A_{OG} 1X	241
b. Cos A_{MG} 1X	242
c. Cos A_{IG} 1X	243
d. Sin A_{OG} 1X	142
e. Sin A_{MG} 1X	143
f. Sin A_{IG} 1X	144

37. Perform the following DSKY operations:

a.	VERB 41	NOUN 20	ENTR
b.	Observe		
	VERB 21	NOUN 22	Flashing
c.	+00000		ENTR
d.	Observe		
	VERB 22	NOUN 22	Flashing
e.	+00000		ENTR
f.	Observe		
	VERB 23	NOUN 22	Flashing
g.	+00000		ENTR
h.	Observe		
	NO ATT lamp lights		

38. Set the CROSSBAR CONTROL to 220. Adjust the G & N POWER ADJUST control until the DVM indicates 28.00 (±0.25) vdc.

STANDBY TO OPERATE TEMPERATURE TRANSIENT

39. 15 minutes after performing step 32, press the EVENT MARKER on the Oscillograph Control panel and record the time and voltage indication of CHANNEL 3.

40. 30 minutes after performing step 31, press the EVENT MARKER on the Oscillograph Control panel and record the time and voltage indicated on CHANNEL 4.

PSA THERMISTOR

41. Measure the 800 CPS P/S temperature thermistor resistance across pins

DATE __________

JOB OPERATE CONTROL TEST | JDC 12207 REV - PAGE 5 OF 6

SUBSYSTEM G & N SYSTEM | ASSY

TB5-12 and TB5-13 on TPA #2. Use a 10K ohm resistor in series with one of the measuring probes. Subtract the resistance of the 10K resistor from the measured resistance. Record indication.

TEMP MON 1 THERMISTOR

42. Measure the Temp Mon 1 thermistor resistance across pins TB5-14 and TB5-15 of TPA #2. Use a 10K ohm resistor in series with one of the measuring probes. Subtract the resistance of the 10K resistor from the measured resistance. Record indication.

PIPA CAL. MOD. THERMISTOR

43. Measure the PIPA Cal. Mod. thermistor resistance across TB1-31 and TB1-27 on TPA #2. Use a 10K ohm resistor in series with one of the measuring probes. Subtract the resistance of the 10K resistor from the measured resistance. Record indication.

IMU CAGE

44. Perform the following DSKY operations:

a. VERB 40 NOUN 20 ENTR
b. Wait 5 seconds
c. VERB 41 NOUN 20 ENTR
d. Observe
VERB 21 NOUN 22 Flashing
e. +00200 ENTR

j. VERB 16 NOUN 20 ENTR
k. Observe
NO ATT lamp lights

45. When the DSKY registers display
Row 1 approximately +00200
Row 2 approximately +00200
Row 3 approximately +00200

Press and hold the IMU CAGE COMMAND pushbutton on the Test Control panel.

46. Set the PAVM FUNCTION selector to total and measure the following signals on the highest usable sensibility of the meters. Record the indications:

Signal	CROSSBAR CONTROL
a. Sin A_{OG} 1X	142
b. Sin A_{MG} 1X	143
c. Sin A_{IG} 1X	144

47. Release the IMU CAGE COMMAND pushbutton on the Test Control Panel and perform the following DSKY operations:

a. VERB 11 NOUN 10 ENTR
b. 00012 ENTR

48. Record the display of Row 1. Enter VERB 36 and press the ENTR pushbutton.

INERTIAL TEMPERATURE CONTROL POINT

49. Allow the PIPA and IRIG temperatures to stabilize as indicated by a voltage change of 0.05 volt or less over a one hour period. Stabilization should occur within 2 hours

DATE ______

JOB OPERATE CONTROL TEST | JDC 12207 REV - PAGE 6 OF 6

SUBSYSTEM G & N SYSTEM | ASSY

since performance of step 31. Record the average voltage indication for the stability period of CHANNELS 3 and 4. Stop the Oscillograph.

50. Compare the PIPA STANDBY voltage indication from step 27 with the PIPA temperature recorded in step 49. Calculate and record the difference.

51. Compare the PIPA temperature recorded in step 39 with the PIPA temperature recorded in step 49. Calculate and record the difference.

52. Compare the IRIG temperature recorded in step 40 with the IRIG temperature recorded in step 49. Calculate and record the difference.

HEATER TELEMETRY DISCRETE

53. Record the maximum and minimum voltage indicated on CHANNEL 5.

BLOWER TELEMETRY DISCRETE

54. Record the maximum and minimum voltage indicated on CHANNEL 6.

MASTER ALARM TEST

55. Press the INTERFACE LOAD TEST pushbutton on the Test Selector panel and set the INTERFACE LOAD TEST selector to 1.

56. Press the TEST START pushbutton.

57. Observe and record that the MASTER ALARM pushbutton on the Indicator Control panel lights.

58. Press the TEST STOP and INTERFACE LOAD TEST pushbuttons on the Test Selector panel. The MASTER ALARM pushbutton shall go out. Set the INTERFACE LOAD TEST selector to OFF.

MASTER ALARM RESET TEST

59. Press the CONTINUITY TEST pushbutton on the Test Selector panel and set the CONTINUITY TEST selector to 10.

60. Set the CONDITION LAMPS switch on the Indicator Control panel to TEST.

61. Press the MASTER ALARM pushbutton. Observe and record that the pushbutton lights.

62. Press the CONTINUITY TEST pushbutton on the Test Selector panel. Set the CONTINUITY TEST selector to OFF.

NORMALIZATION

63. Perform the following DSKY operations:

a. VERB 40 NOUN 20 ENTR
b. Wait 5 seconds
c. VERB 41 NOUN 20 ENTR
d. +00000 ENTR
e. +00000 ENTR
f. +00000 ENTR
g. Observe
NO ATT lamp lights

64. Observe that the Electro Luminescent lighting on the Indicator Control panel is lighted.

IMPORTANT See Below

INTERVAL

TOOLS AND MATERIAL

IMPORTANT: 1. Proceed with this JDC if JDC 12207 has been completed and system operation has not been interrupted. If system operation has been interrupted, perform JDC 12204, Part A before proceeding with this JDC.

2. Those signals listed on the Data Sheets which are starred (**) must be corrected by the "MULT BY" factor to obtain the true value.

NOTE: When making dc measurements in steps 2 and 3, set the PAVM VOLTMETER INPUT switch and the SCOPE "A" INPUT SIGNAL switch on the Primary Signal Selector panel to OFF.

1. Establish a MASTER INITIALIZATION condition.

2. Measure signals listed in column 1 of Table 1 on the DVM by setting the CROSSBAR CONTROL to positions indicated in column 2. In addition, use the oscilloscope to measure the peak-to-peak noise in steps h, i, k, n, o and p. Record indications.

VERIFICATION WITH SIDL REQUIRED BEFORE USE

---

3. Using the Buffered and Direct probes on TPA #2, measure the signals listed in column 1 of Table 2 on the DVM by setting the CROSSBAR CONTROL to 199 for ac signals on Buffered probes and to 299 for dc signals on Direct probes.

4. Set switches and controls on the Counter as follows:

DISPLAY TIME (N_2) to 10^5
DISPLAY RESET to ZERO
CLOCK FREQUENCY DIVIDER to 10
CLOCK SELECTOR to INT
INPUT SELECTOR to C SENSE
SENSE SELECTOR to FWD
ATTEN to 10 AC
TRIGGER VOLTAGE fully counterclockwise
SAMPLE TIME (N_1) to 008000
FUNCTION to RATIO OR PERIOD

5. Insure the D SIGNAL portion of the D SIGNAL/D PULSE pushbutton on the Primary Signal Selector panel is lighted. Set the COUNTER INPUT "D" SIGNAL selector to 1.

6. Adjust the ATTEN D selector switch on the Counter to the highest attenuation level that will cause triggering. Set the TRIGGER VOLTAGE control to insure that the Counter starts and stops in about 10 seconds. The Counter should indicate about 100000.

7. Determine frequencies of the signals listed in column 1 of Table 3 by setting the COUNTER INPUT "D" SIGNAL selector on the Primary Signal Selector panel to positions indicated in column 2. Change SAMPLE TIME (N_1) setting per Table 3.

8. Connect a coaxial cable between connector J1-A and J4-F in the Auxiliary Input Panel. Set the Oscilloscope to trigger "B" TIME BASE.

9. Using the pulse probe, measure and record the peak-to-peak amplitude of 3200 pps at TPA #2 TB1-6 (hi) and TB1-9 (lo) on the Oscilloscope CHANNEL "B".

10. Set the SCOPE B INPUT 2 selector on the Oscillograph Signal Selector panel to 5 and CHANNEL 5 selector to 7. Insure that CH5 AC pushbutton is lighted.

11. Set the DUAL-TRACE AMPLIFIER MODE selector on the Oscilloscope to ALTER. Set the VOLTS/DIV selector for CH 1 to 2 and CH 2 to 10.

12. Pull out TRIGGER CH 1 ONLY switch on the Dual Trace Amplifier.

13. Set the TIME BASE "B" controls as follows:

TIME/DIV to .1 m sec
TRIGGER to LOWER BEAM
COUPLING AC FAST to AC
SLOPE to +
LEVEL - to see trace
B MODE to NORMAL TRIGGER

14. Set switches CH 1 and CH 2 on the Oscilloscope to GND and position both traces to coincidence. Position the coincidence of sweeps to the center of the scope grid pattern.

15. Set the TIME BASE "B" TIME/DIV control to 50 μsec and pull 10X MAG POSITION control. Set CH 1 and CH 2 switches to AC.

---

16. Measure and record the time difference between the leading edge of the 3200 PPS set pulse and the first positive going zero crossover to the 28V, 3200 cps signal.

CAUTION: Perform step 18 immediately after step 17

17. Remove all power from the G & N system by pressing the pushbuttons on the Test Control panel in the following sequence:

PROCEED ISS STANDBY
OIA ON/ISS POWER DISABLED
OPTICS POWER ON
CGC/LGC POWER ON
400 CPS POWER ON
G/N POWER B BUS

18. Press the following pushbuttons:

CGC/LGC POWER ON
400 CPS POWER ON
(Wait for PROCEED portion to light)
PROCEED/ISS STANDBY
OPTICS POWER ON
(Wait for PROCEED portion to light)

19. Press the PROCEED/ISS OPERATE pushbutton. The ISS OPERATE portion shall light and the PROCEED portion shall go out.

20. Repeat steps a and b of Table 1.

21. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 299.

22. Using the DVM and dc probes, measure and record the 28 VDC IMU Operate voltage at TPA #2 TB1-22 (hi) and TB5-39 (lo).

CAUTION: Perform step 24 immediately after step 23.

23. Remove all power from the G & N system by pressing the pushbuttons on the Test Control panel in the following sequence:

PROCEED ISS STANDBY
OIA ON/ISS POWER DISABLED
OPTICS POWER ON
CGC/LGC POWER ON
400 CPS POWER ON
G/N POWER A BUS

24. Repeat steps 18 and 19.

25. Calibrate the PAVM per steps A.1 through A.21 of JDC 18040 (MEASUREMENT OF A PHASE ANGLE).

26. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 99 and the VOLTMETER INPUT PAVM switch to SIG 2. Using direct probes, monitor the 800 cps 28V 5% Phase A at TPA #2 TB5 pin 37 (hi) and TB5 pin 33 (lo).

27. Measure and record the phase angle indicated on the PAVM per JDC 18040 steps B.1 through B.7.

28. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 99 and the VOLTMETER INPUT PAVM switch to SIG 2. Using direct probes monitor 800 cps 28V 5% Phase B at TPA #2 TB5 pin 29 (hi) and TB5 pin 33 (lo).

29. Measure and record the phase angle indicated on the PAVM per JDC 18040 steps B.1 through B.7.

30. Calculate the phase angle between steps 27 and 29.

---

31. Set the CROSSBAR CONTROL to 99 and the VOLTMETER INPUT PAVM switch to SIG 2. Using Direct probes, measure 800 cps 28V 5% Optics phase angle at TPA #2 TB5 pin 35 (hi) and TB5 pin 48 (lo). Record indication.

LOW BUS VOLTAGE

32. Set the CROSSBAR CONTROL to 75 and the VOLTMETER INPUT DVM switch to SIG 1. Adjust the G & N POWER ADJUST control for 25.8 (+0.25, -0) volts dc on the DVM. Repeat steps 2 through 16 and 25 through 31. In step 2 measure only items c, d, f, g, h, i, j, k, m, n, o and p of Table 1, in step 3 measure only items a, b, c, d, e, f, g, h, i, j and n of Table 2 and in step 7 measure only items a, b and c of Table 3.

HIGH BUS VOLTAGE

33. Set the CROSSBAR CONTROL to 75 and the VOLTMETER INPUT DVM switch to SIG 1. Adjust the G & N POWER ADJUST control for 30.8 (+0, -0.25) volts dc on the DVM. Repeat steps 2 through 16 and 25 through 31.

In step 2 measure only items c, d, f, g, h, i, j, k, m, n, o and p of Table 1, in step 3 measure only items a, b, c, d, e, f, g, h, i, j and n of Table 2 and in step 7 measure only items a, b and c of Table 3.

NORMALIZATION OF SYSTEM

34. Set the CROSSBAR CONTROL to 20 and the VOLTMETER INPUT DVM switch to SIG 2.

35. Adjust the G & N POWER ADJUST control on the Test Control panel until the DVM indicates an input bus voltage of 28.0 28.0 (±0.25) vdc. Record indication.

CGC +4VDC-CONTROL 1 (ACE)

36. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 94 and the VOLTMETER INPUT DVM switch to SIG 1 and measure the voltage on the DVM. Record the indication.

37. Press the INTERFACE LOAD TEST pushbutton on the Test Selector panel. The pushbutton shall light.

38. Set the INTERFACE LOAD SELECTOR to position 7.

39. Press the TEST START pushbutton. The pushbutton shall light.

40. Set the CROSSBAR CONTROL to 94 and the VOLTMETER INPUT DVM switch to SIG 1 and measure the voltage on the DVM. Record the indication.

41. Press the TEST STOP pushbutton. The TEST START pushbutton shall go out.

42. Calculate the CGC +4 VDC voltage change.

CGC +14 VDC-CONTROL 2 (ACE)

43. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 93 and the VOLTMETER INPUT DVM switch to SIG 2 and measure the voltage on the DVM. Record the indication.

44. Press the INTERFACE LOAD TEST pushbutton on the Test Selector panel. The pushbutton shall light.

JOB G & N SYSTEM POWER SUPPLIES TEST | JDC 12208 REV A PAGE 5 OF 6
SUBSYSTEM G & N SYSTEM | ASSY

45. Set the INTERFACE LOAD SELECTOR to position 8.

46. Press the TEST START pushbutton. The pushbutton shall light.

47. Set the CROSSBAR CONTROL to 93 and the VOLTMETER INPUT DVM switch to SIG 2 and measure the voltage on the DVM. Record the indication.

48. Press the TEST STOP pushbutton. The TEST START pushbutton shall go out.

49. Calculate the CGC +14VDC voltage change.

IMPORTANT See Below

INTERVAL

TOOLS AND MATERIAL

IMPORTANT: 1. Proceed with this JDC if JDC 12207 has been completed and system operation has not been interrupted. If system operation has been interrupted, perform JDC 12204, Part A before proceeding with this JDC.

2. Those signals listed on the Data Sheets which are starred (**) must be corrected by the "MULT BY" factor to obtain the true value.

NOTE: When making dc measurements in steps 2 and 3, set the PAVM VOLTMETER INPUT switch and the SCOPE "A" INPUT SIGNAL switch on the Primary Signal Selector panel to OFF.

1. Establish a MASTER INITIALIZATION condition.

2. Measure signals listed in column 1 of Table 1 on the DVM by setting the CROSSBAR CONTROL to positions indicated in column 2. In addition, use the oscilloscope to measure the peak-to-peak noise in steps h, i, k, n, o and p. Record indications.

VERIFICATION WITH SIDL REQUIRED BEFORE USE

DATE 30 JUN 66

JOB G & N SYSTEM POWER SUPPLIES TEST | JDC 12208 REV B PAGE 2 OF 6

SUBSYSTEM G & N SYSTEM | ASSY

3. Using the Buffered and Direct probes on TPA #2, measure the signals listed in column 1 of Table 2 on the DVM by setting the CROSSBAR CONTROL to 199 for ac signals on Buffered probes and to 299 for dc signals on Direct probes.

4. Set switches and controls on the Counter as follows:

- DISPLAY TIME (N_2) to 10^5
- DISPLAY RESET to ZERO
- CLOCK FREQUENCY DIVIDER to 10
- CLOCK SELECTOR to INT
- INPUT SELECTOR to C SENSE
- SENSE SELECTOR to FWD
- ATTEN to 10 AC
- TRIGGER VOLTAGE fully counterclockwise.
- SAMPLE TIME (N_1) to 008000
- FUNCTION to RATIO OR PERIOD

5. Insure the D SIGNAL portion of the D SIGNAL/D PULSE pushbutton on the Primary Signal Selector panel is lighted. Set the COUNTER INPUT "D" SIGNAL selector to 1.

6. Adjust the ATTEN D selector switch on the Counter to the highest attenuation level that will cause triggering. Set the TRIGGER VOLTAGE control to insure that the Counter starts and stops in about 10 seconds. The Counter should indicate about 100000.

7. Determine frequencies of the signals listed in column 1 of Table 3 by setting the COUNTER INPUT "D" SIGNAL selector on the Primary Signal Selector panel to positions indicated in column 2. Change SAMPLE TIME (N_1) setting per Table 3.

8. Connect a coaxial cable between connector J1-A and J4-F in the Auxiliary Input Panel. Set the Oscilloscope to trigger "B" TIME BASE.

9. Using the pulse probe, measure and record the peak-to-peak amplitude of 3200 pps at TPA #2 TB1-6 (hi) and T31-9 (lo) on the Oscilloscope CHANNEL "B".

10. Set the SCOPE B INPUT 2 selector on the Oscillograph Signal Selector panel to 5 and CHANNEL 5 selector to 7. Insure that CH5 AC pushbutton is lighted.

11. Set the DUAL-TRACE AMPLIFIER MODE selector on the Oscilloscope to ALTER. Set the VOLTS/DIV selector for CH 1 to 2 and CH 2 to 10.

12. Pull out TRIGGER CH 1 ONLY switch on the Dual Trace Amplifier.

13. Set the TIME BASE "B" controls as follows:

- TIME/DIV to .1 m sec
- TRIGGER to LOWER BEAM
- COUPLING AC FAST to AC
- SLOPE to +
- LEVEL - to see trace
- B MODE to NORMAL TRIGGER

14. Set switches CH 1 and CH 2 on the Oscilloscope to GND and position both traces to coincidence. Position the coincidence of sweeps to the center of the scope grid pattern.

15. Set the TIME BASE "B" TIME/DIV control to 50 µsec and pull 10X MAG POSITION control. Set CH 1 and CH 2 switches to AC.

DATE 30 JUN 66

JOB G & N SYSTEM POWER SUPPLIES TEST | JDC 12208 REV B PAGE 3 OF 6

SUBSYSTEM G & N SYSTEM | ASSY

16. Measure and record the time difference between the leading edge of the 3200 PPS set pulse and the first positive going zero crossover to the 28V, 3200 cps signal.

CAUTION: Perform step 18 immediately after step 17

17. Remove all power from the G & N system by pressing the pushbuttons on the Test Control panel in the following sequence:

- PROCEED ISS STANDBY
- OIA ON/ISS POWER DISABLED
- OPTICS POWER ON
- CGC/LGC POWER ON
- 400 CPS POWER ON
- G/N POWER B BUS

18. Press the following pushbuttons:

- CGC/LGC POWER ON
- 400 CPS POWER ON
  (Wait for PROCEED portion to light)
- PROCEED/ISS STANDBY
- OPTICS POWER ON
  (Wait for PROCEED portion to light)

19. Press the PROCEED/ISS OPERATE pushbutton. The ISS OPERATE portion shall light and the PROCEED portion shall go out.

20. Repeat steps a and b of Table 1.

21. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 299.

22. Using the DVM and dc probes, measure and record the 28 VDC IMU Operate voltage at TPA #2 TB1-22 (hi) and TB5-39 (lo).

CAUTION: Perform step 24 immediately after step 23.

23. Remove all power from the G & N system by pressing the pushbuttons on the Test Control panel in the following sequence:

- PROCEED ISS STANDBY
- OIA ON/ISS POWER DISABLED
- OPTICS POWER ON
- CGC/LGC POWER ON
- 400 CPS POWER ON
- G/N POWER A BUS

24. Repeat steps 18 and 19.

25. Calibrate the PAVM per steps A.1 through A.21 of JDC 18040 (MEASUREMENT OF A PHASE ANGLE).

26. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 99 and the VOLTMETER INPUT PAVM switch to SIG 2. Using direct probes, monitor the 800 cps 28V 5% Phase A at TPA #2 TB5 pin 37 (hi) and TB5 pin 33 (lo).

27. Measure and record the phase angle indicated on the PAVM per JDC 18040 steps B.1 through B.7.

28. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 99 and the VOLTMETER INPUT PAVM switch to SIG 2. Using direct probes monitor 800 cps 28V 5% Phase B at TPA #2 TB5 pin 29 (hi) and TB5 pin 33 (lo).

29. Measure and record the phase angle indicated on the PAVM per JDC 18040 steps B.1 through B.7.

30. Calculate the phase angle between steps 27 and 29.

DATE 30 JUN 66

JOB G & N SYSTEM POWER SUPPLIES TEST | JDC 12208 REV B PAGE 4 OF 6

SUBSYSTEM G & N SYSTEM | ASSY

31. Set the CROSSBAR CONTROL to 99 and the VOLTMETER INPUT PAVM switch to SIG 2. Using Direct probes, measure 800 cps 28V 5% Optics phase angle at TPA #2 TB5 pin 35 (hi) and TB5 pin 48 (lo). Record indication.

LOW BUS VOLTAGE

32. Set the CROSSBAR CONTROL to 75 and the VOLTMETER INPUT DVM switch to SIG 1. Adjust the G & N POWER ADJUST control for 25.8 (+0.25, -0) volts dc on the DVM. Repeat steps 2 through 16 and 25 through 31. In step 2 measure only items c, d, f, g, h, i, j, k, m, n, o and p of Table 1, in step 3 measure only items a, b, c, d, e, f, g, h, i, j and n of Table 2 and in step 7 measure only items a, b and c of Table 3.

HIGH BUS VOLTAGE

33. Set the CROSSBAR CONTROL to 75 and the VOLTMETER INPUT DVM switch to SIG 1. Adjust the G & N POWER ADJUST control for 30.8 (+0, -0.25) volts dc on the DVM. Repeat steps 2 through 16 and 25 through 31.
In step 2 measure only items c, d, f, g, h, i, j, k, m, n, o and p of Table 1, in step 3 measure only items a, b, c, d, e, f, g, h, i, j and n of Table 2 and in step 7 measure only items a, b and c of Table 3.

NORMALIZATION OF SYSTEM

34. Set the CROSSBAR CONTROL to 20 and the VOLTMETER INPUT DVM switch to SIG 2.

35. Adjust the G & N POWER ADJUST control on the Test Control panel until the DVM indicates an input bus voltage of 28.0 28.0 (±0.25) vdc. Record indication.

CGC +4VDC-CONTROL 1 (ACE)

36. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 94 and the VOLTMETER INPUT DVM switch to SIG 1 and measure the voltage on the DVM. Record the indication.

37. Press the INTERFACE LOAD TEST pushbutton on the Test Selector panel. The pushbutton shall light.

38. Set the INTERFACE LOAD SELECTOR to position 7.

39. Press the TEST START pushbutton. The pushbutton shall light.

40. Set the CROSSBAR CONTROL to 94 and the VOLTMETER INPUT DVM switch to SIG 1 and measure the voltage on the DVM. Record the indication.

41. Press the TEST STOP pushbutton. The TEST START pushbutton shall go out.

42. Calculate the CGC +4 VDC voltage change.

CGC +14 VDC-CONTROL 2 (ACE)

43. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 93 and the VOLTMETER INPUT DVM switch to SIG 2 and measure the voltage on the DVM. Record the indication.

44. Press the INTERFACE LOAD TEST pushbutton on the Test Selector panel. The pushbutton shall light.

DATE 30 JUN 66

JOB G & N SYSTEM POWER SUPPLIES TEST | JDC 12208 REV B PAGE 5 OF 6

SUBSYSTEM G & N SYSTEM | ASSY

45. Set the INTERFACE LOAD SELECTOR to position 8.

46. Press the TEST START pushbutton. The pushbutton shall light.

47. Set the CROSSBAR CONTROL to 93 and the VOLTMETER INPUT DVM switch to SIG 2 and measure the voltage on the DVM. Record the indication.

48. Press the TEST STOP pushbutton. The TEST START pushbutton shall go out.

49. Calculate the CGC +14VDC voltage change.

REFERENCES

IMPORTANT See Below

INTERVAL

TOOLS AND MATERIAL

IMPORTANT: 1. Proceed with this JDC if JDC 12207 has been completed and system operation has not been interrupted. If system operation has been interrupted, perform JDC 12204, Part A before proceeding with this JDC.

2. Those signals listed on the Data Sheets which are starred (**) must be corrected by the "MULT BY" factor to obtain the true value.

NOTE: When making dc measurements in steps 2 and 3, set the PAVM VOLTMETER INPUT switch and the SCOPE "A" INPUT SIGNAL switch on the Primary Signal Selector panel to OFF.

1. Establish a MASTER INITIALIZATION condition.

2. Measure signals listed in column 1 of Table 1 on the DVM by setting the CROSSBAR CONTROL to positions indicated in column 2. In addition, use the oscilloscope to measure the peak-to-peak noise in steps h, i, k, n, o and p. Record indications.

VERIFICATION WITH SIDL REQUIRED BEFORE USE

DATE 30 JUN 66

JOB G & N SYSTEM POWER SUPPLIES TEST | JDC 12208 REV C PAGE 2 OF 6

SUBSYSTEM G & N SYSTEM | ASSY

3. Using the Buffered and Direct probes on TPA #2, measure the signals listed in column 1 of Table 2 on the DVM by setting the CROSSBAR CONTROL to 199 for ac signals on Buffered probes and to 299 for dc signals on Direct probes.

4. Set switches and controls on the Counter as follows:

DISPLAY TIME (N_2) to 10^5
DISPLAY RESET to ZERO
CLOCK FREQUENCY DIVIDER to 10
CLOCK SELECTOR to INT
INPUT SELECTOR to C SENSE
SENSE SELECTOR to FWD
ATTEN to 10 AC
TRIGGER VOLTAGE fully counterclockwise
SAMPLE TIME (N_1) to 008000
FUNCTION to RATIO OR PERIOD

5. Insure the D SIGNAL portion of the D SIGNAL/D PULSE pushbutton on the Primary Signal Selector panel is lighted. Set the COUNTER INPUT "D" SIGNAL selector to 1.

6. Adjust the ATTEN D selector switch on the Counter to the highest attenuation level that will cause triggering. Set the TRIGGER VOLTAGE control to insure that the Counter starts and stops in about 10 seconds. The Counter should indicate about 100000.

7. Determine frequencies of the signals listed in column 1 of Table 3 by setting the COUNTER INPUT "D" SIGNAL selector on the Primary Signal Selector panel to positions indicated in column 2. Change SAMPLE TIME (N_1) setting per Table 3.

8. Connect a coaxial cable between connector J1-A and J4-F in the Auxiliary Input Panel. Set the Oscilloscope to trigger "B" TIME BASE.

9. Using the pulse probe, measure and record the peak-to-peak amplitude of 3200 pps at TPA #2 TB1-6 (hi) and TB1-9 (lo) on the Oscilloscope CHANNEL "B".

10. Set the SCOPE B INPUT 2 selector on the Oscillograph Signal Selector panel to 5 and CHANNEL 5 selector to 7. Insure that CH5 AC pushbutton is lighted.

11. Set the DUAL-TRACE AMPLIFIER MODE selector on the Oscilloscope to ALTER. Set the VOLTS/DIV selector for CH 1 to 2 and CH 2 to 10.

12. Pull out TRIGGER CH 1 ONLY switch on the Dual Trace Amplifier.

13. Set the TIME BASE "B" controls as follows:

TIME/DIV to .1 m sec
TRIGGER to LOWER BEAM
COUPLING AC FAST to AC
SLOPE to +
LEVEL - to see trace
B MODE to NORMAL TRIGGER

14. Set switches CH 1 and CH 2 on the Oscilloscope to GND and position both traces to coincidence. Position the coincidence of sweeps to the center of the scope grid pattern.

15. Set the TIME BASE "B" TIME/DIV control to 50 μsec and pull 10X MAG POSITION control. Set CH 1 and CH 2 switches to AC.

JOB G & N SYSTEM POWER SUPPLIES TEST | JDC 12208 REV C PAGE 3 OF 6

SUBSYSTEM G & N SYSTEM | ASSY

16. Measure and record the time difference between the leading edge of the 3200 PPS set pulse and the first positive going zero crossover to the 28V, 3200 cps signal.

CAUTION: Perform step 18 immediately after step 17

17. Remove all power from the G & N system by pressing the pushbuttons on the Test Control panel in the following sequence:

PROCEED ISS STANDBY
OIA ON/ISS POWER DISABLED
OPTICS POWER ON
CGC/LGC POWER ON
400 CPS POWER ON
G/N POWER B BUS

18. Press the following pushbuttons:

CGC/LGC POWER ON
400 CPS POWER ON
(Wait for PROCEED portion to light)
PROCEED/ISS STANDBY
OPTICS POWER ON
(Wait for PROCEED portion to light)

19. Press the PROCEED/ISS OPERATE pushbutton. The ISS OPERATE portion shall light and the PROCEED portion shall go out.

20. Repeat steps a and b of Table 1.

21. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 299.

22. Using the DVM and dc probes, measure and record the 28 VDC IMU Operate voltage at TPA #2 TB1-22 (hi) and TB5-39 (lo).

CAUTION: Perform step 24 immediately after step 23.

23. Remove all power from the G & N system by pressing the pushbuttons on the Test Control panel in the following sequence:

PROCEED ISS STANDBY
OIA ON/ISS POWER DISABLED
OPTICS POWER ON
CGC/LGC POWER ON
400 CPS POWER ON
G/N POWER A BUS

24. Repeat steps 18 and 19.

25. Calibrate the PAVM per steps A.1 through A.21 of JDC 18040 (MEASUREMENT OF A PHASE ANGLE).

26. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 99 and the VOLTMETER INPUT PAVM switch to SIG 2. Using direct probes, monitor the 800 cps 28V 5% Phase A at TPA #2 TB5 pin 37 (hi) and TB5 pin 33 (lo).

27. Measure and record the phase angle indicated on the PAVM per JDC 18040 steps B.1 through B.7.

28. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 99 and the VOLTMETER INPUT PAVM switch to SIG 2. Using direct probes monitor 800 cps 28V 5% Phase B at TPA #2 TB5 pin 29 (hi) and TB5 pin 33 (lo).

29. Measure and record the phase angle indicated on the PAVM per JDC 18040 steps B.1 through B.7.

30. Calculate the phase angle between steps 27 and 29.

DATE 30 JUN 66

JOB G & N SYSTEM POWER SUPPLIES TEST | JDC 12208 REV C PAGE 4 OF 6

SUBSYSTEM G & N SYSTEM | ASSY

31. Set the CROSSBAR CONTROL to 99 and the VOLTMETER INPUT PAVM switch to SIG 2. Using Direct probes, measure 800 cps 28V 5% Optics phase angle at TPA #2 TB5 pin 35 (hi) and TB5 pin 48 (lo). Record indication.

LOW BUS VOLTAGE

32. Set the CROSSBAR CONTROL to 75 and the VOLTMETER INPUT DVM switch to SIG 1. Adjust the G & N POWER ADJUST control for 25.8 (+0.25, -0) volts dc on the DVM. Repeat steps 2 through 16 and 25 through 31. In step 2 measure only items c, d, f, g, h, i, j, k, m, n, o and p of Table 1, in step 3 measure only items a, b, c, d, e, f, g, h, i, j and n of Table 2 and in step 7 measure only items a, b and c of Table 3.

HIGH BUS VOLTAGE

33. Set the CROSSBAR CONTROL to 75 and the VOLTMETER INPUT DVM switch to SIG 1. Adjust the G & N POWER ADJUST control for 30.8 (+0, -0.25) volts dc on the DVM. Repeat steps 2 through 16 and 25 through 31.

In step 2 measure only items c, d, f, g, h, i, j, k, m, n, o and p of Table 1, in step 3 measure only items a, b, c, d, e, f, g, h, i, j and n of Table 2 and in step 7 measure only items a, b and c of Table 3.

NORMALIZATION OF SYSTEM

34. Set the CROSSBAR CONTROL to 20 and the VOLTMETER INPUT DVM switch to SIG 2.

35. Adjust the G & N POWER ADJUST control on the Test Control panel until the DVM indicates an input bus voltage of 28.0 28.0 (±0.25) vdc. Record indication.

CGC +4VDC-CONTROL 1 (ACE)

36. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 94 and the VOLTMETER INPUT DVM switch to SIG 1 and measure the voltage on the DVM. Record the indication.

37. Press the INTERFACE LOAD TEST pushbutton on the Test Selector panel. The pushbutton shall light.

38. Set the INTERFACE LOAD SELECTOR to position 7.

39. Press the TEST START pushbutton. The pushbutton shall light.

40. Set the CROSSBAR CONTROL to 94 and the VOLTMETER INPUT DVM switch to SIG 1 and measure the voltage on the DVM. Record the indication.

41. Press the TEST STOP pushbutton. The TEST START pushbutton shall go out.

42. Calculate the CGC +4 VDC voltage change.

CGC +14 VDC-CONTROL 2 (ACE)

43. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 93 and the VOLTMETER INPUT DVM switch to SIG 2 and measure the voltage on the DVM. Record the indication.

44. Press the INTERFACE LOAD TEST pushbutton on the Test Selector panel. The pushbutton shall light.

DATE 30 JUN 66

45. Set the INTERFACE LOAD SELECTOR to position 8.

46. Press the TEST START pushbutton. The pushbutton shall light.

47. Set the CROSSBAR CONTROL to 93 and the VOLTMETER INPUT DVM switch to SIG 2 and measure the voltage on the DVM. Record the indication.

48. Press the TEST STOP pushbutton. The TEST START pushbutton shall go out.

49. Calculate the CGC +14VDC voltage change.

INTERVAL

TOOLS AND MATERIAL

IMPORTANT: 1. Proceed with this JDC if JDC 12207 has been completed and system operation has not been interrupted. If system operation has been interrupted, perform JDC 12204, Part A before proceeding with this JDC.

2. Those signals listed on the Data Sheets which are starred (**) must be corrected by the "MULT BY" factor to obtain the true value.

NOTE: When making dc measurements in steps 2 and 3, set the PAVM VOLTMETER INPUT switch and the SCOPE "A" INPUT SIGNAL switch on the Primary Signal Selector panel to OFF.

1. Establish a MASTER INITIALIZATION condition. Press OPTICS POWER ON pushbutton on Test Control panel and the OPTICS POWER ON pushbutton shall light.

2. Measure signals listed in column 1 of Table 1 on the DVM by setting the CROSSBAR CONTROL to positions indicated in column 2. In addition, use the oscilloscope to measure the peak-to-peak noise in steps h, i, k, n, o and p. Record indications.

VERIFICATION WITH SIDL REQUIRED BEFORE USE

DATE 30 JUN 66

JOB G & N SYSTEM POWER SUPPLIES TEST JDC 12208 REV D PAGE 2 OF 6

SUBSYSTEM G & N SYSTEM ASSY

3. Using the Buffered and Direct probes on TPA #2, measure the signals listed in column 1 of Table 2 on the DVM by setting the CROSSBAR CONTROL to 199 for ac signals on Buffered probes and to 299 for dc signals on Direct probes.

4. Set switches and controls on the Counter as follows:

- DISPLAY TIME (N_2) to 10^5
- DISPLAY RESET to ZERO
- CLOCK FREQUENCY DIVIDER to 10
- CLOCK SELECTOR to INT
- INPUT SELECTOR to C SENSE
- SENSE SELECTOR to FWD
- ATTEN to 10 AC
- TRIGGER VOLTAGE fully counterclockwise
- SAMPLE TIME (N_1) to 008000
- FUNCTION to RATIO OR PERIOD

5. Insure the D SIGNAL portion of the D SIGNAL/D PULSE pushbutton on the Primary Signal Selector panel is lighted. Set the COUNTER INPUT "D" SIGNAL selector to 1.

6. Adjust the ATTEN D selector switch on the Counter to the highest attenuation level that will cause triggering. Set the TRIGGER VOLTAGE control to insure that the Counter starts and stops in about 10 seconds. The Counter should indicate about 100000.

7. Determine frequencies of the signals listed in column 1 of Table 3 by setting the COUNTER INPUT "D" SIGNAL selector on the Primary Signal Selector panel to positions indicated in column 2. Change SAMPLE TIME (N_1) setting per Table 3.

8. Connect a coaxial cable between connector J1-A and J4-F in the Auxiliary Input Panel. Set the Oscilloscope to trigger "B" TIME BASE.

9. Using the pulse probe, measure and record the peak-to-peak amplitude of 3200 pps at TPA #2 TB1-6 (hi) and TB1-9 (lo) on the Oscilloscope CHANNEL "B".

10. Set the SCOPE B INPUT 2 selector on the Oscillograph Signal Selector panel to 5 and CHANNEL 5 selector to 7. Insure that CH5 AC pushbutton is lighted.

11. Set the DUAL-TRACE AMPLIFIER MODE selector on the Oscilloscope to ALTER. Set the VOLTS/DIV selector for CH 1 to 2 and CH 2 to 10.

12. Pull out TRIGGER CH 1 ONLY switch on the Dual Trace Amplifier.

13. Set the TIME BASE "B" controls as follows:

- TIME/DIV to .1 m sec
- TRIGGER to LOWER BEAM
- COUPLING AC FAST to AC
- SLOPE to +
- LEVEL - to see trace
- B MODE to NORMAL TRIGGER

14. Set switches CH 1 and CH 2 on the Oscilloscope to GND and position both traces to coincidence. Position the coincidence of sweeps to the center of the scope grid pattern.

15. Set the TIME BASE "B" TIME/DIV control to 50 μsec and pull 10X MAG POSITION control. Set CH 1 and CH 2 switches to AC.

DATE 30 JUN 66

JOB G & N SYSTEM POWER SUPPLIES TEST JDC 12208 REV D PAGE 3 OF 6

SUBSYSTEM G & N SYSTEM ASSY

16. Measure and record the time difference between the leading edge of the 3200 PPS set pulse and the first positive going zero crossover to the 28V, 3200 cps signal.

CAUTION: Perform step 18 immediately after step 17

17. Remove all power from the G & N system by pressing the pushbuttons on the Test Control panel in the following sequence:

- PROCEED ISS STANDBY
- OIA ON/ISS POWER DISABLED
- OPTICS POWER ON
- CGC/LGC POWER ON
- 400 CPS POWER ON
- G/N POWER B BUS

18. Press the following pushbuttons:

- CGC/LGC POWER ON
- 400 CPS POWER ON (Wait for PROCEED portion to light)
- PROCEED/ISS STANDBY
- OPTICS POWER ON (Wait for PROCEED portion to light)

19. Press the PROCEED/ISS OPERATE pushbutton. The ISS OPERATE portion shall light and the PROCEED portion shall go out.

20. Repeat steps a and b of Table 1.

21. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 299.

22. Using the DVM and dc probes, measure and record the 28 VDC IMU Operate voltage at TPA #2 TB1-22 (hi) and TB5-39 (lo).

CAUTION: Perform step 24 immediately after step 23.

23. Remove all power from the G & N system by pressing the pushbuttons on the Test Control panel in the following sequence:

- PROCEED ISS STANDBY
- OIA ON/ISS POWER DISABLED
- OPTICS POWER ON
- CGC/LGC POWER ON
- 400 CPS POWER ON
- G/N POWER A BUS

24. Repeat steps 18 and 19.

25. Calibrate the PAVM per steps A.1 through A.21 of JDC 18040 (MEASUREMENT OF A PHASE ANGLE).

26. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 99 and the VOLTMETER INPUT PAVM switch to SIG 2. Using direct probes, monitor the 800 cps 28V 5% Phase A at TPA #2 TB5 pin 37 (hi) and TB5 pin 33 (lo).

27. Measure and record the phase angle indicated on the PAVM per JDC 18040 steps B.1 through B.7.

28. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 99 and the VOLTMETER INPUT PAVM switch to SIG 2. Using direct probes monitor 800 cps 28V 5% Phase B at TPA #2 TB5 pin 29 (hi) and TB5 pin 33 (lo).

29. Measure and record the phase angle indicated on the PAVM per JDC 18040 steps B.1 through B.7.

30. Calculate the phase angle between steps 27 and 29.

DATE 30 JUN 66

JOB G & N SYSTEM POWER SUPPLIES TEST JDC 12208 REV D PAGE 4 OF 6

SUBSYSTEM G & N SYSTEM ASSY

31. Set the CROSSBAR CONTROL to 99 and the VOLTMETER INPUT PAVM switch to SIG 2. Using Direct probes, measure 800 cps 28V 5% Optics phase angle at TPA #2 TB5 pin 35 (hi) and TB5 pin 48 (lo). Record indication.

LOW BUS VOLTAGE

32. Set the CROSSBAR CONTROL to 75 and the VOLTMETER INPUT DVM switch to SIG 1. Adjust the G & N POWER ADJUST control for 25.8 (+0.25, -0) volts dc on the DVM. Repeat steps 2 through 16 and 25 through 31. In step 2 measure only items c, d, f, g, h, i, j, k, m, n, o and p of Table 1, in step 3 measure only items a, b, c, d, e, f, g, h, i, j and n of Table 2 and in step 7 measure only items a, b and c of Table 3.

HIGH BUS VOLTAGE

33. Set the CROSSBAR CONTROL to 75 and the VOLTMETER INPUT DVM switch to SIG 1. Adjust the G & N POWER ADJUST control for 30.8 (+0, -0.25) volts dc on the DVM. Repeat steps 2 through 16 and 25 through 31.

In step 2 measure only items c, d, f, g, h, i, j, k, m, n, o and p of Table 1, in step 3 measure only items a, b, c, d, e, f, g, h, i, j and n of Table 2 and in step 7 measure only items a, b and c of Table 3.

33A. Press OPTICS POWER ON pushbutton on the Test Control panel and the OPTICS POWER ON pushbutton shall go out.

NORMALIZATION OF SYSTEM

34. Set the CROSSBAR CONTROL to 20 and the VOLTMETER INPUT DVM switch to SIG 2.

35. Adjust the G & N POWER ADJUST control on the Test Control panel until the DVM indicates an input bus voltage of 28.0 28.0 (±0.25) vdc. Record indication.

CGC +4VDC-CONTROL 1 (ACE)

36. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 94 and the VOLTMETER INPUT DVM switch to SIG 1 and measure the voltage on the DVM. Record the indication.

37. Press the INTERFACE LOAD TEST pushbutton on the Test Selector panel. The pushbutton shall light.

38. Set the INTERFACE LOAD SELECTOR to position 7.

39. Press the TEST START pushbutton. The pushbutton shall light.

40. Set the CROSSBAR CONTROL to 94 and the VOLTMETER INPUT DVM switch to SIG 1 and measure the voltage on the DVM. Record the indication.

41. Press the TEST STOP pushbutton. The TEST START pushbutton shall go out.

42. Calculate the CGC +4 VDC voltage change.

CGC +14 VDC-CONTROL 2 (ACE)

43. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 93 and the VOLTMETER INPUT DVM switch to

DATE 30 JUN 66

FORM 00144
Chg. 7-23-65

SIG 2 and measure the voltage on the DVM. Record the indication.

44. Press the INTERFACE LOAD TEST pushbutton on the Test Selector panel. The pushbutton shall light.

45. Set the INTERFACE LOAD SELECTOR to position 8.

46. Press the TEST START pushbutton. The pushbutton shall light.

47. Set the CROSSBAR CONTROL to 93 and the VOLTMETER INPUT DVM switch to SIG 2 and measure the voltage on the DVM. Record the indication.

48. Press the TEST STOP pushbutton. The TEST START pushbutton shall go out.

49. Calculate the CGC +14VDC voltage change.

INTERVAL

TOOLS AND MATERIAL

IMPORTANT: 1. Proceed with this JDC if JDC 12207 has been completed and system operation has not been interrupted. If system operation has been interrupted, perform JDC 12204, Part A before proceeding with this JDC.

2. Those signals listed on the Data Sheets which are starred (**) must be corrected by the "MULT BY" factor to obtain the true value.

NOTE: When making dc measurements in steps 2 and 3, set the PAVM VOLTMETER INPUT switch and the SCOPE "A" INPUT SIGNAL switch on the Primary Signal Selector panel to OFF.

1. Establish a MASTER INITIALIZATION condition in accordance with JDC 12215. Press OPTICS POWER ON pushbutton on Test Control panel and the OPTICS POWER ON pushbutton shall light.

2. Measure signals listed in column 1 of Table 1 on the DVM by setting the CROSSBAR CONTROL to positions indicated in column 2. In addition, use the oscilloscope to measure the peak-to-peak noise in steps h, i, k, n, o and p. Record indications.

VERIFICATION WITH SIDL REQUIRED BEFORE USE

DATE 30 JUN 66

JOB G & N SYSTEM POWER SUPPLIES TEST JDC 12208 REV E PAGE 2 OF 6

SUBSYSTEM G & N SYSTEM ASSY

3. Using the Buffered and Direct probes on TPA #2, measure the signals listed in column 1 of Table 2 on the DVM by setting the CROSSBAR CONTROL to 199 for ac signals on Buffered probes and to 299 for dc signals on Direct probes.

4. Set switches and controls on the Counter as follows:

DISPLAY TIME (N_2) to 10^5
DISPLAY RESET to ZERO
CLOCK FREQUENCY DIVIDER to 10
CLOCK SELECTOR to INT
INPUT SELECTOR to C SENSE
SENSE SELECTOR to FWD
ATTEN to 10 AC
TRIGGER VOLTAGE fully counterclockwise
SAMPLE TIME (N_1) to 008000
FUNCTION to RATIO OR PERIOD

5. Insure the D SIGNAL portion of the D SIGNAL/D PULSE pushbutton on the Primary Signal Selector panel is lighted. Set the COUNTER INPUT "D" SIGNAL selector to 1.

6. Adjust the ATTEN D selector switch on the Counter to the highest attenuation level that will cause triggering. Set the TRIGGER VOLTAGE control to insure that the Counter starts and stops in about 10 seconds. The Counter should indicate about 100000.

7. Determine frequencies of the signals listed in column 1 of Table 3 by setting the COUNTER INPUT "D" SIGNAL selector on the Primary Signal Selector panel to positions indicated in column 2. Change SAMPLE TIME (N_1) setting per Table 3.

8. Connect a coaxial cable between connector J1-A and J4-F in the Auxiliary Input Panel. Set the Oscilloscope to trigger "B" TIME BASE.

9. Using the pulse probe, measure and record the peak-to-peak amplitude of 3200 pps at TPA #2 TB1-6 (hi) and TB1-9 (lo) on the Oscilloscope CHANNEL "B".

10. Set the SCOPE B INPUT 2 selector on the Oscillograph Signal Selector panel to 5 and CHANNEL 5 selector to 7. Insure that CH5 AC pushbutton is lighted.

11. Set the DUAL-TRACE AMPLIFIER MODE selector on the Oscilloscope to ALTER. Set the VOLTS/DIV selector for CH 1 to 2 and CH 2 to 10.

12. Pull out TRIGGER CH 1 ONLY switch on the Dual Trace Amplifier.

13. Set the TIME BASE "B" controls as follows:

TIME/DIV to .1 m sec
TRIGGER to LOWER BEAM
COUPLING AC FAST to AC
SLOPE to +
LEVEL - to see trace
B MODE to NORMAL TRIGGER

14. Set switches CH 1 and CH 2 on the Oscilloscope to GND and position both traces to coincidence. Position the coincidence of sweeps to the center of the scope grid pattern.

15. Set the TIME BASE "B" TIME/DIV control to 50 µsec and pull 10X MAG POSITION control. Set CH 1 and CH 2 switches to AC.

DATE 30 JUN 66

JOB G & N SYSTEM POWER SUPPLIES TEST JDC 12208 REV E PAGE 3 OF 6

SUBSYSTEM G & N SYSTEM ASSY

16. Measure and record the time difference between the leading edge of the 3200 PPS set pulse and the first positive going zero crossover to the 28V, 3200 cps signal.

CAUTION: Perform step 18 immediately after step 17

17. Remove all power from the G & N system by pressing the pushbuttons on the Test Control panel in the following sequence:

PROCEED ISS STANDBY
OIA ON/ISS POWER DISABLED
OPTICS POWER ON
CGC/LGC POWER ON
400 CPS POWER ON
G/N POWER B BUS

18. Press the following pushbuttons:

CGC/LGC POWER ON
400 CPS POWER ON
(Wait for PROCEED portion to light)
PROCEED/ISS STANDBY
OPTICS POWER ON
(Wait for PROCEED portion to light)

19. Press the PROCEED/ISS OPERATE pushbutton. The ISS OPERATE portion shall light and the PROCEED portion shall go out.

20. After 90 seconds have elapsed, repeat steps a and b of Table 1.

21. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 299.

22. Using the DVM and dc probes, measure and record the 28 VDC IMU Operate voltage at TPA #2 TB1-22 (hi) and TB5-39 (lo).

CAUTION: Perform step 24 immediately after step 23.

23. Remove all power from the G & N system by pressing the pushbuttons on the Test Control panel in the following sequence:

PROCEED ISS STANDBY
OIA ON/ISS POWER DISABLED
OPTICS POWER ON
CGC/LGC POWER ON
400 CPS POWER ON
G/N POWER A BUS

24. Repeat steps 18 and 19.

25. After 90 seconds have elapsed, calibrate the PAVM per steps A.1 through A.21 of JDC 18040 (MEASUREMENT OF A PHASE ANGLE).

26. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 99 and the VOLTMETER INPUT PAVM switch to SIG 2. Using direct probes, monitor the 800 cps 28V 5% Phase A at TPA #2 TB5 pin 37 (hi) and TB5 pin 33 (lo).

27. Measure and record the phase angle indicated on the PAVM per JDC 18040 steps B.1 through B.7.

28. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 99 and the VOLTMETER INPUT PAVM switch to SIG 2. Using direct probes monitor 800 cps 28V 5% Phase B at TPA #2 TB5 pin 29 (hi) and TB5 pin 33 (lo).

29. Measure and record the phase angle indicated on the PAVM per JDC 18040 steps B.1 through B.7.

30. Calculate the phase angle between steps 27 and 29.

DATE 30 JUN 66

JOB G & N SYSTEM POWER SUPPLIES TEST JDC 12208 REV E PAGE 4 OF 6

SUBSYSTEM G & N SYSTEM ASSY

31. Set the CROSSBAR CONTROL to 99 and the VOLTMETER INPUT PAVM switch to SIG 2. Using Direct probes, measure 800 cps 28V 5% Optics phase angle at TPA #2 TB5 pin 35 (hi) and TB5 pin 48 (lo). Record indication.

LOW BUS VOLTAGE

32. Set the CROSSBAR CONTROL to 75 and the VOLTMETER INPUT DVM switch to SIG 1. Adjust the G & N POWER ADJUST control for 25.8 (+0.25, -0) volts dc on the DVM. Repeat steps 2 through 16 and 25 through 31. In step 2 measure only items c, d, f, g, h, i, j, k, m, n, o and p of Table 1, in step 3 measure only items a, b, c, d, e, f, g, h, i, j and n of Table 2 and in step 7 measure only items a, b and c of Table 3.

HIGH BUS VOLTAGE

33. Set the CROSSBAR CONTROL to 75 and the VOLTMETER INPUT DVM switch to SIG 1. Adjust the G & N POWER ADJUST control for 30.8 (+0, -0.25) volts dc on the DVM. Repeat steps 2 through 16 and 25 through 31.

In step 2 measure only items c, d, f, g, h, i, j, k, m, n, o and p of Table 1, in step 3 measure only items a, b, c, d, e, f, g, h, i, j and n of Table 2 and in step 7 measure only items a, b and c of Table 3.

33A. Press OPTICS POWER ON pushbutton on the Test Control panel and the OPTICS POWER ON pushbutton shall go out.

NORMALIZATION OF SYSTEM

34. Set the CROSSBAR CONTROL to 20 and the VOLTMETER INPUT DVM switch to SIG 2.

35. Adjust the G & N POWER ADJUST control on the Test Control panel until the DVM indicates an input bus voltage of 28.0 28.0 (±0.25) vdc. Record indication.

CGC +4VDC-CONTROL 1 (ACE)

36. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 94 and the VOLTMETER INPUT DVM switch to SIG 1 and measure the voltage on the DVM. Record the indication.

37. Press the INTERFACE LOAD TEST pushbutton on the Test Selector panel. The pushbutton shall light.

38. Set the INTERFACE LOAD SELECTOR to position 7.

39. Press the TEST START pushbutton. The pushbutton shall light.

40. Set the CROSSBAR CONTROL to 94 and the VOLTMETER INPUT DVM switch to SIG 1 and measure the voltage on the DVM. Record the indication.

41. Press the TEST STOP pushbutton. The TEST START pushbutton shall go out.

42. Calculate the CGC +4 VDC voltage change.

CGC +14 VDC-CONTROL 2 (ACE)

43. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 93 and the VOLTMETER INPUT DVM switch to

DATE 30 JUN 66

JOB G & N SYSTEM POWER SUPPLIES TEST	JDC 12208 REV E PAGE 5 OF 6
SUBSYSTEM G & N SYSTEM	ASSY

SIG 2 and measure the voltage on the DVM. Record the indication.

44. Press the INTERFACE LOAD TEST pushbutton on the Test Selector panel. The pushbutton shall light.

45. Set the INTERFACE LOAD SELECTOR to position 8.

46. Press the TEST START pushbutton. The pushbutton shall light.

47. Set the CROSSBAR CONTROL to 93 and the VOLTMETER INPUT DVM switch to SIG 2 and measure the voltage on the DVM. Record the indication.

48. Press the TEST STOP pushbutton. The TEST START pushbutton shall go out.

49. Calculate the CGC +14VDC voltage change.

								TOOLS AND MATERIAL

IMPORTANT: 1. Proceed with this JDC if JDC 12207 has been completed and system operation has not been interrupted. If system operation has been interrupted, perform JDC 12204, Part A before proceeding with this JDC.

2. Those signals listed on the Data Sheets which are starred (**) must be corrected by the "MULT BY" factor to obtain the true value. The "MULT BY" factors can be found on the GSE Signal Selection List, part number 2901077.

NOTE: When making dc measurements in steps 2 and 3, set the PAVM VOLTMETER INPUT switch and the SCOPE "A" INPUT SIGNAL switch on the Primary Signal Selector panel to OFF.

1. Establish a MASTER INITIALIZATION condition in accordance with JDC 12216. Press OPTICS POWER ON pushbutton on Test Control panel and the OPTICS POWER ON pushbutton shall light.

2. Measure signals listed in column 1 of Table 1 on the DVM by setting the CROSSBAR CONTROL to positions indicated in column 2. In addition, use the oscilloscope to measure the peak-to-peak noise in steps h, i, k, n, o and p. Record indications.

VERIFICATION WITH SIDL REQUIRED BEFORE USE

DATE 30 JUN 66

JOB G & N SYSTEM POWER SUPPLIES TEST | JDC 12208 REV F PAGE 2 OF 6

SUBSYSTEM G & N SYSTEM | ASSY

3. Using the Buffered and Direct probes on TPA #2, measure the signals listed in column 1 of Table 2 on the DVM by setting the CROSSBAR CONTROL to 199 for ac signals on Buffered probes and to 299 for dc signals on Direct probes.

4. Set switches and controls on the Counter as follows:

- DISPLAY TIME (N_2) to 10^5
- DISPLAY RESET to ZERO
- CLOCK FREQUENCY DIVIDER to 10
- CLOCK SELECTOR to INT
- INPUT SELECTOR to C SENSE
- SENSE SELECTOR to FWD
- ATTEN to 10 AC
- TRIGGER VOLTAGE fully counterclockwise
- SAMPLE TIME (N_1) to 008000
- FUNCTION to RATIO OR PERIOD

5. Insure the D SIGNAL portion of the D SIGNAL/D PULSE pushbutton on the Primary Signal Selector panel is lighted. Set the COUNTER INPUT "D" SIGNAL selector to 1.

6. Adjust the ATTEN D selector switch on the Counter to the highest attenuation level that will cause triggering. Set the TRIGGER VOLTAGE control to insure that the Counter starts and stops in about 10 seconds. The Counter should indicate about 100000.

7. Determine frequencies of the signals listed in column 1 of Table 3 by setting the COUNTER INPUT "D" SIGNAL selector on the Primary Signal Selector panel to positions indicated in column 2. Change SAMPLE TIME (N_1) setting per Table 3.

8. Connect a coaxial cable between connector J1-A and J4-F in the Auxiliary Input Panel. Set the Oscilloscope to trigger "B" TIME BASE.

9. Using the pulse probe, measure and record the peak-to-peak amplitude of 3200 pps at TPA #2 TB1-6 (hi) and TB1-9 (lo) on the Oscilloscope CHANNEL "B".

10. Set the SCOPE B INPUT 2 selector on the Oscillograph Signal Selector panel to 5 and CHANNEL 5 selector to 7. Insure that CH5 AC pushbutton is lighted.

11. Set the DUAL-TRACE AMPLIFIER MODE selector on the Oscilloscope to ALTER. Set the VOLTS/DIV selector for CH 1 to 2 and CH 2 to 10.

12. Pull out TRIGGER CH 1 ONLY switch on the Dual Trace Amplifier.

13. Set the TIME BASE "B" controls as follows:

- TIME/DIV to .1 m sec
- TRIGGER to LOWER BEAM
- COUPLING AC FAST to AC
- SLOPE to +
- LEVEL - to see trace
- B MODE to NORMAL TRIGGER

14. Set switches CH 1 and CH 2 on the Oscilloscope to GND and position both traces to coincidence. Position the coincidence of sweeps to the center of the scope grid pattern.

15. Set the TIME BASE "B" TIME/DIV control to 50 µsec and pull 10X MAG POSITION control. Set CH 1 and CH 2 switches to AC.

DATE 30 JUN 66

JOB G & N SYSTEM POWER SUPPLIES TEST | JDC 12208 REV F PAGE 3 OF 6

SUBSYSTEM G & N SYSTEM | ASSY

16. Measure and record the time difference between the leading edge of the 3200 PPS set pulse and the first positive going zero crossover to the 28V, 3200 cps signal.

CAUTION: Perform step 18 immediately after step 17

17. Remove all power from the G & N system by pressing the pushbuttons on the Test Control panel in the following sequence:

- PROCEED ISS STANDBY
- OIA ON/ISS POWER DISABLED
- OPTICS POWER ON
- CGC/LGC POWER ON
- 400 CPS POWER ON
- G/N POWER B BUS

18. Press the following pushbuttons:

- CGC/LGC POWER ON
- 400 CPS POWER ON (Wait for PROCEED portion to light)
- PROCEED/ISS STANDBY
- OPTICS POWER ON (Wait for PROCEED portion to light)

19. Press the PROCEED/ISS OPERATE pushbutton. The ISS OPERATE portion shall light and the PROCEED portion shall go out.

20. After 90 seconds have elapsed, repeat steps a and b of Table 1.

21. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 299.

22. Using the DVM and dc probes, measure and record the 28 VDC IMU Operate voltage at TPA #2 TB1-22 (hi) and TB5-39 (lo).

CAUTION: Perform step 24 immediately after step 23.

23. Remove all power from the G & N system by pressing the pushbuttons on the Test Control panel in the following sequence:

- PROCEED ISS STANDBY
- OIA ON/ISS POWER DISABLED
- OPTICS POWER ON
- CGC/LGC POWER ON
- 400 CPS POWER ON
- G/N POWER A BUS

24. Repeat steps 18 and 19.

25. After 90 seconds have elapsed, calibrate the PAVM per steps A.1 through A.21 of JDC 18040 (MEASUREMENT OF A PHASE ANGLE).

26. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 99 and the VOLTMETER INPUT PAVM switch to SIG 2. Using direct probes, monitor the 800 cps 28V 5% Phase A at TPA #2 TB5 pin 37 (hi) and TB5 pin 33 (lo).

27. Measure and record the phase angle indicated on the PAVM per JDC 18040 steps B.1 through B.7.

28. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 99 and the VOLTMETER INPUT PAVM switch to SIG 2. Using direct probes monitor 800 cps 28V 5% Phase B at TPA #2 TB5 pin 29 (hi) and TB5 pin 33 (lo).

29. Measure and record the phase angle indicated on the PAVM per JDC 18040 steps B.1 through B.7.

30. Calculate the phase angle between steps 27 and 29.

DATE 30 JUN 66

JOB G & N SYSTEM POWER SUPPLIES TEST | JDC 12208 REV F PAGE 4 OF 6

SUBSYSTEM G & N SYSTEM | ASSY

31. Set the CROSSBAR CONTROL to 99 and the VOLTMETER INPUT PAVM switch to SIG 2. Using Direct probes, measure 800 cps 28V 5% Optics phase angle at TPA #2 TB5 pin 35 (hi) and TB5 pin 48 (lo). Record indication.

LOW BUS VOLTAGE

32. Set the CROSSBAR CONTROL to 75 and the VOLTMETER INPUT DVM switch to SIG 1. Adjust the G & N POWER ADJUST control for 25.8 (+0.25, -0) volts dc on the DVM. Repeat steps 2 through 16 and 25 through 31. In step 2 measure only items c, d, f, g, h, i, j, k, m, n, o and p of Table 1, in step 3 measure only items a, b, c, d, e, f, g, h, i, j and n of Table 2 and in step 7 measure only items a, b and c of Table 3.

HIGH BUS VOLTAGE

33. Set the CROSSBAR CONTROL to 75 and the VOLTMETER INPUT DVM switch to SIG 1. Adjust the G & N POWER ADJUST control for 30.8 (+0, -0.25) volts dc on the DVM. Repeat steps 2 through 16 and 25 through 31.

In step 2 measure only items c, d, f, g, h, i, j, k, m, n, o and p of Table 1, in step 3 measure only items a, b, c, d, e, f, g, h, i, j and n of Table 2 and in step 7 measure only items a, b and c of Table 3.

33A. Press OPTICS POWER ON pushbutton on the Test Control panel and the OPTICS POWER ON pushbutton shall go out.

NORMALIZATION OF SYSTEM

34. Set the CROSSBAR CONTROL to 20 and the VOLTMETER INPUT DVM switch to SIG 2.

35. Adjust the G & N POWER ADJUST control on the Test Control panel until the DVM indicates an input bus voltage of 28.0 28.0 (±0.25) vdc. Record indication.

CGC +4VDC-CONTROL 1 (ACE)

36. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 94 and the VOLTMETER INPUT DVM switch to SIG 1 and measure the voltage on the DVM. Record the indication.

37. Press the INTERFACE LOAD TEST pushbutton on the Test Selector panel. The pushbutton shall light.

38. Set the INTERFACE LOAD SELECTOR to position 7.

39. Press the TEST START pushbutton. The pushbutton shall light.

40. Set the CROSSBAR CONTROL to 94 and the VOLTMETER INPUT DVM switch to SIG 1 and measure the voltage on the DVM. Record the indication.

41. Press the TEST STOP pushbutton. The TEST START pushbutton shall go out.

42. Calculate the CGC +4 VDC voltage change.

CGC +14 VDC-CONTROL 2 (ACE)

43. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 93 and the VOLTMETER INPUT DVM switch to

DATE 30 JUN 66

JOB G & N SYSTEM POWER SUPPLIES TEST | JDC 12208 REV F PAGE 5 OF 6

SUBSYSTEM G & N SYSTEM | ASSY

SIG 2 and measure the voltage on the DVM. Record the indication.

44. Press the INTERFACE LOAD TEST pushbutton on the Test Selector panel. The pushbutton shall light.

45. Set the INTERFACE LOAD SELECTOR to position 8.

46. Press the TEST START pushbutton. The pushbutton shall light.

47. Set the CROSSBAR CONTROL to 93 and the VOLTMETER INPUT DVM switch to SIG 2 and measure the voltage on the DVM. Record the indication.

48. Press the TEST STOP pushbutton. The TEST START pushbutton shall go out.

49. Calculate the CGC +14VDC voltage change.

IMPORTANT See Below

INTERVAL

TOOLS AND MATERIAL

IMPORTANT: 1. Proceed with this JDC if JDC 12207 has been completed and system operation has not been interrupted. If system operation has been interrupted, perform JDC 12204, Part A before proceeding with this JDC.

2. Those signals listed on the Data Sheets which are starred (**) must be corrected by the "MULT BY" factor to obtain the true value. The "MULT BY" factors can be found on the GSE Signal Selection List, part number 2901077.

NOTE: When making dc measurements in steps 2 and 3, set the PAVM VOLTMETER INPUT switch and the SCOPE "A" INPUT SIGNAL switch on the Primary Signal Selector panel to OFF.

1. Establish a MASTER INITIALIZATION condition in accordance with JDC 12215. Press OPTICS POWER ON pushbutton on Test Control panel and the OPTICS POWER ON pushbutton shall light.

2. Measure signals listed in column 1 of Table 1 on the DVM by setting the CROSSBAR CONTROL to positions indicated in column 2. In addition, use the oscilloscope to measure the peak-to-peak noise in steps h, i, k, n, o and p. Record indications.

VERIFICATION WITH SIDL REQUIRED BEFORE USE

DATE 30 JUN 66

JOB G & N SYSTEM POWER SUPPLIES TEST | JDC 12208 REV G PAGE 2 OF 6
SUBSYSTEM G & N SYSTEM | ASSY

3. Using the Buffered and Direct probes on TPA #2, measure the signals listed in column 1 of Table 2 on the DVM by setting the CROSSBAR CONTROL to 199 for ac signals on Buffered probes and to 299 for dc signals on Direct probes.

4. Set switches and controls on the Counter as follows:

DISPLAY TIME (N_2) to 10^5
DISPLAY RESET to ZERO
CLOCK FREQUENCY DIVIDER to 10
CLOCK SELECTOR to INT
INPUT SELECTOR to C SENSE
SENSE SELECTOR to FWD
ATTEN to 10 AC
TRIGGER VOLTAGE fully counterclockwise
SAMPLE TIME (N_1) to 008000
FUNCTION to RATIO OR PERIOD

5. Insure the D SIGNAL portion of the D SIGNAL/D PULSE pushbutton on the Primary Signal Selector panel is lighted. Set the COUNTER INPUT "D" SIGNAL selector to 1.

6. Adjust the ATTEN D selector switch on the Counter to the highest attenuation level that will cause triggering. Set the TRIGGER VOLTAGE control to insure that the Counter starts and stops in about 10 seconds. The Counter should indicate about 100000.

7. Determine frequencies of the signals listed in column 1 of Table 3 by setting the COUNTER INPUT "D" SIGNAL selector on the Primary Signal Selector panel to positions indicated in column 2. Change SAMPLE TIME (N_1) setting per Table 3.

8. Connect a coaxial cable between connector J1-A and J4-F in the Auxiliary Input Panel. Set the Oscilloscope to trigger "B" TIME BASE.

9. Using the pulse probe, measure and record the peak-to-peak amplitude of 3200 pps at TPA #2 TB1-6 (hi) and TB1-9 (lo) on the Oscilloscope CHANNEL "B".

10. Set the SCOPE B INPUT 2 selector on the Oscillograph Signal Selector panel to 5 and CHANNEL 5 selector to 7. Insure that CH5 AC pushbutton is lighted.

11. Set the DUAL-TRACE AMPLIFIER MODE selector on the Oscilloscope to ALTER. Set the VOLTS/DIV selector for CH 1 to 2 and CH 2 to 10.

12. Pull out TRIGGER CH 1 ONLY switch on the Dual Trace Amplifier.

13. Set the TIME BASE "B" controls as follows:

TIME/DIV to .1 m sec
TRIGGER to LOWER BEAM
COUPLING AC FAST to AC
SLOPE to +
LEVEL - to see trace
B MODE to NORMAL TRIGGER

14. Set switches CH 1 and CH 2 on the Oscilloscope to GND and position both traces to coincidence. Position the coincidence of sweeps to the center of the scope grid pattern.

15. Set the TIME BASE "B" TIME/DIV control to 50 µsec and pull 10X MAG POSITION control. Set CH 1 and CH 2 switches to AC.

DATE 30 JUN 66

JOB G & N SYSTEM POWER SUPPLIES TEST | JDC 12208 REV G PAGE 3 OF 6
SUBSYSTEM G & N SYSTEM | ASSY

16. Measure and record the time difference between the leading edge of the 3200 PPS set pulse and the first positive going zero crossover to the 28V, 3200 cps signal.

CAUTION: Perform step 18 immediately after step 17

17. Remove all power from the G & N system by pressing the pushbuttons on the Test Control panel in the following sequence:

PROCEED ISS STANDBY
OIA ON/ISS POWER DISABLED
OPTICS POWER ON
CGC/LGC POWER ON
400 CPS POWER ON
G/N POWER B BUS

18. Press the following pushbuttons:

CGC/LGC POWER ON
400 CPS POWER ON
(Insure that PROCEED portion of PROCEED/ISS STANDBY is lighted)
PROCEED/ISS STANDBY
OPTICS POWER ON
(Wait for PROCEED portion of PROCEED/ISS OPERATE to light)

19. Press the PROCEED/ISS OPERATE pushbutton. The ISS OPERATE portion shall light and the PROCEED portion shall go out.

20. After 90 seconds have elapsed, repeat steps a and b of Table 1.

21. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 299.

22. Using the DVM and dc probes, measure and record the 28 VDC IMU Operate voltage at TPA #2 TB1-22 (hi) and TB5-39 (lo).

CAUTION: Perform step 24 immediately after step 23.

23. Remove all power from the G & N system by pressing the pushbuttons on the Test Control panel in the following sequence:

PROCEED ISS STANDBY
OIA ON/ISS POWER DISABLED
OPTICS POWER ON
CGC/LGC POWER ON
400 CPS POWER ON
G/N POWER A BUS

24. Repeat steps 18 and 19.

25. After 90 seconds have elapsed, calibrate the PAVM per steps A.1 through A.21 of JDC 18040 (MEASUREMENT OF A PHASE ANGLE).

26. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 99 and the VOLTMETER INPUT PAVM switch to SIG 2. Using direct probes, monitor the 800 cps 28V 5% Phase A at TPA #2 TB5 pin 37 (hi) and TB5 pin 33 (lo).

27. Measure and record the phase angle indicated on the PAVM per JDC 18040 steps B.1 through B.7.

28. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 99 and the VOLTMETER INPUT PAVM switch to SIG 2. Using direct probes monitor 800 cps 28V 5% Phase B at TPA #2 TB5 pin 29 (hi) and TB5 pin 33 (lo).

29. Measure and record the phase angle indicated on the PAVM per JDC 18040 steps B.1 through B.7.

30. Calculate the phase angle between steps 27 and 29.

DATE 30 JUN 66

JOB G & N SYSTEM POWER SUPPLIES TEST | JDC 12208 REV G PAGE 4 OF 6
SUBSYSTEM G & N SYSTEM | ASSY

31. Set the CROSSBAR CONTROL to 99 and the VOLTMETER INPUT PAVM switch to SIG 2. Using Direct probes, measure 800 cps 28V 5% Optics phase angle at TPA #2 TB5 pin 35 (hi) and TB5 pin 48 (lo). Record indication.

LOW BUS VOLTAGE

32. Set the CROSSBAR CONTROL to 75 and the VOLTMETER INPUT DVM switch to SIG 1. Adjust the G & N POWER ADJUST control for 25.8 (+0.25, -0) volts dc on the DVM. Repeat steps 2 through 16 and 25 through 31. In step 2 measure only items c, d, f, g, h, i, j, k, m, n, o and p of Table 1, in step 3 measure only items a, b, c, d, e, f, g, h, i, j and n of Table 2 and in step 7 measure only items a, b and c of Table 3.

HIGH BUS VOLTAGE

33. Set the CROSSBAR CONTROL to 75 and the VOLTMETER INPUT DVM switch to SIG 1. Adjust the G & N POWER ADJUST control for 30.8 (+0, -0.25) volts dc on the DVM. Repeat steps 2 through 16 and 25 through 31.

In step 2 measure only items c, d, f, g, h, i, j, k, m, n, o and p of Table 1, in step 3 measure only items a, b, c, d, e, f, g, h, i, j and n of Table 2 and in step 7 measure only items a, b and c of Table 3.

33A. Press OPTICS POWER ON pushbutton on the Test Control panel and the OPTICS POWER ON pushbutton shall go out.

NORMALIZATION OF SYSTEM

34. Set the CROSSBAR CONTROL to 20 and the VOLTMETER INPUT DVM switch to SIG 2.

35. Adjust the G & N POWER ADJUST control on the Test Control panel until the DVM indicates an input bus voltage of 28.0 28.0 (±0.25) vdc. Record indication.

CGC +4VDC-CONTROL 1 (ACE)

36. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 94 and the VOLTMETER INPUT DVM switch to SIG 1 and measure the voltage on the DVM. Record the indication.

37. Press the INTERFACE LOAD TEST pushbutton on the Test Selector panel. The pushbutton shall light.

38. Set the INTERFACE LOAD SELECTOR to position 7.

39. Press the TEST START pushbutton. The pushbutton shall light.

40. Set the CROSSBAR CONTROL to 94 and the VOLTMETER INPUT DVM switch to SIG 1 and measure the voltage on the DVM. Record the indication.

41. Press the TEST STOP pushbutton. The TEST START pushbutton shall go out.

42. Calculate the CGC +4 VDC voltage change.

CGC +14 VDC-CONTROL 2 (ACE)

43. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 93 and the VOLTMETER INPUT DVM switch to

DATE 30 JUN 66

JOB G & N SYSTEM POWER SUPPLIES TEST | JDC 12208 REV G PAGE 5 OF 6

SUBSYSTEM G & N SYSTEM | ASSY

SIG 2 and measure the voltage on the DVM. Record the indication.

44. Press the INTERFACE LOAD TEST pushbutton on the Test Selector panel. The pushbutton shall light.

45. Set the INTERFACE LOAD SELECTOR to position 8.

46. Press the TEST START pushbutton. The pushbutton shall light.

47. Set the CROSSBAR CONTROL to 93 and the VOLTMETER INPUT DVM switch to SIG 2 and measure the voltage on the DVM. Record the indication.

48. Press the TEST STOP pushbutton. The TEST START pushbutton shall go out.

49. Calculate the CGC +14VDC voltage change.

IMPORTANT: 1. Proceed with this JDC if JDC 12207 has been completed and system operation has not been interrupted. If system operation has been interrupted, perform JDC 12204, Part A before proceeding with this JDC.

2. Those signals listed on the Data Sheets which are starred (**) must be corrected by the "MULT BY" factor to obtain the true value. The "MULT BY" factors can be found on the GSE Signal Selection List, part number 2901077.

NOTE: When making dc measurements in steps 2 and 3, set the PAVM VOLTMETER INPUT switch and the SCOPE "A" INPUT SIGNAL switch on the Primary Signal Selector panel to OFF.

1. Establish a MASTER INITIALIZATION condition in accordance with JDC 12215. Press OPTICS POWER ON pushbutton on Test Control panel and the OPTICS POWER ON pushbutton shall light.

2. Measure signals listed in column 1 of Table 1 on the DVM by setting the CROSSBAR CONTROL to positions indicated in column 2. In addition, use the oscilloscope to measure the peak-to-peak noise in steps h, i, k, n, o and p. Record indications.

VERIFICATION WITH SIDL REQUIRED BEFORE USE

DATE 30 JUN 66

JOB G & N SYSTEM POWER SUPPLIES TEST

JDC 12208 REV H PAGE 2 OF 6

SUBSYSTEM G & N SYSTEM

ASSY

3. Using the Buffered and Direct probes on TPA #2, measure the signals listed in column 1 of Table 2 on the DVM by setting the CROSSBAR CONTROL to 199 for ac signals on Buffered probes and to 299 for dc signals on Direct probes.

4. Set switches and controls on the Counter as follows:

DISPLAY TIME (N_2) to 10^5
DISPLAY RESET to ZERO
CLOCK FREQUENCY DIVIDER to 10
CLOCK SELECTOR to INT
INPUT SELECTOR to C SENSE
SENSE SELECTOR to FWD
ATTEN to 10 AC
TRIGGER VOLTAGE fully counterclockwise
SAMPLE TIME (N_1) to 008000
FUNCTION to RATIO OR PERIOD

5. Insure the D SIGNAL portion of the D SIGNAL/D PULSE pushbutton on the Primary Signal Selector panel is lighted. Set the COUNTER INPUT "D" SIGNAL selector to 1.

6. Adjust the ATTEN D selector switch on the Counter to the highest attenuation level that will cause triggering. Set the TRIGGER VOLTAGE control to insure that the Counter starts and stops in about 10 seconds. The Counter should indicate about 100000.

7. Determine frequencies of the signals listed in column 1 of Table 3 by setting the COUNTER INPUT "D" SIGNAL selector on the Primary Signal Selector panel to positions indicated in column 2. Change SAMPLE TIME (N_1) setting per Table 3.

8. Connect a coaxial cable between connector J1-A and J4-F in the Auxiliary Input Panel. Set the Oscilloscope to trigger "B" TIME BASE.

9. Using the pulse probe, measure and record the peak-to-peak amplitude of 3200 pps at TPA #2 TB1-6 (hi) and TB1-9 (lo) on the Oscilloscope CHANNEL "B".

10. Set the SCOPE B INPUT 2 selector on the Oscillograph Signal Selector panel to 5 and CHANNEL 5 selector to 7. Insure that CH5 AC pushbutton is lighted.

11. Set the DUAL-TRACE AMPLIFIER MODE selector on the Oscilloscope to ALTER. Set the VOLTS/DIV selector for CH 1 to 2 and CH 2 to 10.

12. Pull out TRIGGER CH 1 ONLY switch on the Dual Trace Amplifier.

13. Set the TIME BASE "B" controls as follows:

TIME/DIV to .1 m sec
TRIGGER to LOWER BEAM
COUPLING AC FAST to AC
SLOPE to +
LEVEL - to see trace
B MODE to NORMAL TRIGGER

14. Set switches CH 1 and CH 2 on the Oscilloscope to GND and position both traces to coincidence. Position the coincidence of sweeps to the center of the scope grid pattern.

15. Set the TIME BASE "B" TIME/DIV control to 50 µsec and pull 10X MAG POSITION control. Set CH 1 and CH 2 switches to AC.

DATE 30 JUN 66

JOB G & N SYSTEM POWER SUPPLIES TEST

JDC 12208 REV H PAGE 3 OF 6

SUBSYSTEM G & N SYSTEM

ASSY

16. Measure and record the time difference between the leading edge of the 3200 PPS set pulse and the first positive going zero crossover to the 28V, 3200 cps signal.

CAUTION: Perform step 18 immediately after step 17

17. Remove all power from the G & N system by pressing the pushbuttons on the Test Control panel in the following sequence:

PROCEED ISS STANDBY
OIA ON/ISS POWER DISABLED
OPTICS POWER ON
CGC/LGC POWER ON
400 CPS POWER ON
G/N POWER B BUS

18. Press the following pushbuttons:

CGC/LGC POWER ON
400 CPS POWER ON
(Insure that PROCEED portion of PROCEED/ISS STANDBY is lighted)
PROCEED/ISS STANDBY
OPTICS POWER ON
(Wait for PROCEED portion of PROCEED/ISS OPERATE to light)

19. Press the PROCEED/ISS OPERATE pushbutton. The ISS OPERATE portion shall light and the PROCEED portion shall go out.

20. After 90 seconds have elapsed, repeat steps a and b of Table 1.

21. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 299.

22. Using the DVM and dc probes, measure and record the 28 VDC IMU Operate voltage at TPA #2 TB1-22 (hi) and TB5-39 (lo).

CAUTION: Perform step 24 immediately after step 23.

23. Remove all power from the G & N system by pressing the pushbuttons on the Test Control panel in the following sequence:

PROCEED ISS STANDBY
OIA ON/ISS POWER DISABLED
OPTICS POWER ON
CGC/LGC POWER ON
400 CPS POWER ON
G/N POWER A BUS

24. Repeat steps 18 and 19.

25. After 90 seconds have elapsed, calibrate the PAVM per steps A.1 through A.21 of JDC 18040 (MEASUREMENT OF A PHASE ANGLE).

26. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 99 and the VOLTMETER INPUT PAVM switch to SIG 2. Using direct probes, monitor the 800 cps 28V 5% Phase A at TPA #2 TB5 pin 37 (hi) and TB5 pin 33 (lo).

27. Measure and record the phase angle indicated on the PAVM per JDC 18040 steps B.1 through B.7.

28. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 99 and the VOLTMETER INPUT PAVM switch to SIG 2. Using direct probes monitor 800 cps 28V 5% Phase B at TPA #2 TB5 pin 29 (hi) and TB5 pin 33 (lo).

29. Measure and record the phase angle indicated on the PAVM per JDC 18040 steps B.1 through B.7.

30. Calculate the phase angle between steps 27 and 29.

DATE 30 JUN 66

JOB G & N SYSTEM POWER SUPPLIES TEST

JDC 12208 REV H PAGE 4 OF 6

SUBSYSTEM G & N SYSTEM

ASSY

31. Set the CROSSBAR CONTROL to 99 and the VOLTMETER INPUT PAVM switch to SIG 2. Using Direct probes, measure 800 cps 28V 5% Optics phase angle at TPA #2 TB5 pin 35 (hi) and TB5 pin 48 (lo). Record indication.

LOW BUS VOLTAGE

32. Set the CROSSBAR CONTROL to 75 and the VOLTMETER INPUT DVM switch to SIG 1. Adjust the G & N POWER ADJUST control for 25.8 (+0.25, -0) volts dc on the DVM. Repeat steps 2 through 16 and 25 through 31. In step 2 measure only items c, d, f, g, h, i, j, k, m, n, o and p of Table 1, in step 3 measure only items a, b, c, d, e, f, g, h, i, j and n of Table 2 and in step 7 measure only items a, b and c of Table 3.

HIGH BUS VOLTAGE

33. Set the CROSSBAR CONTROL to 75 and the VOLTMETER INPUT DVM switch to SIG 1. Adjust the G & N POWER ADJUST control for 30.8 (+0, -0.25) volts dc on the DVM. Repeat steps 2 through 16 and 25 through 31.

In step 2 measure only items c, d, f, g, h, i, j, k, m, n, o and p of Table 1, in step 3 measure only items a, b, c, d, e, f, g, h, i, j and n of Table 2 and in step 7 measure only items a, b and c of Table 3.

33A. Press OPTICS POWER ON pushbutton on the Test Control panel and the OPTICS POWER ON pushbutton shall go out.

NORMALIZATION OF SYSTEM

34. Set the CROSSBAR CONTROL to 20 and the VOLTMETER INPUT DVM switch to SIG 2.

35. Adjust the G & N POWER ADJUST control on the Test Control panel until the DVM indicates an input bus voltage of 28.0 28.0 (±0.25) vdc. Record indication.

CGC +4VDC-CONTROL 1 (ACE)

36. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 94 and the VOLTMETER INPUT DVM switch to SIG 1 and measure the voltage on the DVM. Record the indication.

37. Press the INTERFACE LOAD TEST pushbutton on the Test Selector panel. The pushbutton shall light.

38. Set the INTERFACE LOAD SELECTOR to position 7.

39. Press the TEST START pushbutton. The pushbutton shall light.

40. Set the CROSSBAR CONTROL to 94 and the VOLTMETER INPUT DVM switch to SIG 1 and measure the voltage on the DVM. Record the indication.

41. Press the TEST STOP pushbutton. The TEST START pushbutton shall go out.

42. Calculate the CGC +4 VDC voltage change.

CGC +14 VDC-CONTROL 2 (ACE)

43. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 93 and the VOLTMETER INPUT DVM switch to

DATE 30 JUN 66

SIG 2 and measure the voltage on the DVM. Record the indication.

44. Press the INTERFACE LOAD TEST pushbutton on the Test Selector panel. The pushbutton shall light.

45. Set the INTERFACE LOAD SELECTOR to position 8.

46. Press the TEST START pushbutton. The pushbutton shall light.

47. Set the CROSSBAR CONTROL to 93 and the VOLTMETER INPUT DVM switch to SIG 2 and measure the voltage on the DVM. Record the indication.

48. Press the TEST STOP pushbutton. The TEST START pushbutton shall go out.

49. Calculate the CGC +14VDC voltage change.

INTERVAL

TOOLS AND MATERIAL

IMPORTANT: 1. Proceed with this JDC if JDC 12207 has been completed and system operation has not been interrupted. If system operation has been interrupted, perform JDC 12204, Part A before proceeding with this JDC.

2. Those signals listed on the Data Sheets which are starred (**) must be corrected by the "MULT BY" factor to obtain the true value. The "MULT BY" factors can be found on the GSE Signal Selection List, part number 2901077.

NOTE: When making dc measurements in steps 2 and 3, set the PAVM VOLTMETER INPUT switch and the SCOPE "A" INPUT SIGNAL switch on the Primary Signal Selector panel to OFF.

1. Establish a MASTER INITIALIZATION condition in accordance with JDC 12215. Press OPTICS POWER ON pushbutton on Test Control panel and the OPTICS POWER ON pushbutton shall light.

2. Measure signals listed in column 1 of Table 1 on the DVM by setting the CROSSBAR CONTROL to positions indicated in column 2. In addition, use the oscilloscope to measure the peak-to-peak noise in steps h, i, k, n, o and p. Record indications.

VERIFICATION WITH SIDL REQUIRED BEFORE USE

DATE 30 JUN 66

---

3. Using the Buffered and Direct probes on TPA #2, measure the signals listed in column 1 of Table 2 on the DVM by setting the CROSSBAR CONTROL to 199 for ac signals on Buffered probes and to 299 for dc signals on Direct probes.

4. Set switches and controls on the Counter as follows:

DISPLAY TIME (N_2) to 10^5
DISPLAY RESET to ZERO
CLOCK FREQUENCY DIVIDER to 10
CLOCK SELECTOR to INT
INPUT SELECTOR to C SENSE
SENSE SELECTOR to FWD
ATTEN to 10 AC
TRIGGER VOLTAGE fully counterclockwise
SAMPLE TIME (N_1) to 008000
FUNCTION to RATIO OR PERIOD

5. Insure the D SIGNAL portion of the D SIGNAL/D PULSE pushbutton on the Primary Signal Selector panel is lighted. Set the COUNTER INPUT "D" SIGNAL selector to 1.

6. Adjust the ATTEN D selector switch on the Counter to the highest attenuation level that will cause triggering. Set the TRIGGER VOLTAGE control to insure that the Counter starts and stops in about 10 seconds. The Counter should indicate about 100000.

7. Determine frequencies of the signals listed in column 1 of Table 3 by setting the COUNTER INPUT "D" SIGNAL selector on the Primary Signal Selector panel to positions indicated in column 2. Change SAMPLE TIME (N_1) setting per Table 3.

8. Connect a coaxial cable between connector J1-A and J4-F in the Auxiliary Input Panel. Set the Oscilloscope to trigger "B" TIME BASE.

9. Using the pulse probe, measure and record the peak-to-peak amplitude of 3200 pps at TPA #2 TB1-6 (hi) and TB1-9 (lo) on the Oscilloscope CHANNEL "B".

10. Set the SCOPE B INPUT 2 selector on the Oscillograph Signal Selector panel to 5 and CHANNEL 5 selector to 7. Insure that CH5 AC pushbutton is lighted.

11. Set the DUAL-TRACE AMPLIFIER MODE selector on the Oscilloscope to ALTER. Set the VOLTS/DIV selector for CH 1 to 2 and CH 2 to 10.

12. Pull out TRIGGER CH 1 ONLY switch on the Dual Trace Amplifier.

13. Set the TIME BASE "B" controls as follows:

TIME/DIV to .1 m sec
TRIGGER to LOWER BEAM
COUPLING AC FAST to AC
SLOPE to +
LEVEL - to see trace
B MODE to NORMAL TRIGGER

14. Set switches CH 1 and CH 2 on the Oscilloscope to GND and position both traces to coincidence. Position the coincidence of sweeps to the center of the scope grid pattern.

15. Set the TIME BASE "B" TIME/DIV control to 50 µsec and pull 10X MAG POSITION control. Set CH 1 and CH 2 switches to AC.

DATE 30 JUN 66

---

16. Measure and record the time difference between the leading edge of the 3200 PPS set pulse and the first positive going zero crossover to the 28V, 3200 cps signal.

CAUTION: Perform step 18 immediately after step 17

17. Remove all power from the G & N system by pressing the pushbuttons on the Test Control panel in the following sequence:

PROCEED ISS STANDBY
OIA ON/ISS POWER DISABLED
OPTICS POWER ON
CGC/LGC POWER ON
400 CPS POWER ON
G/N POWER B BUS

18. Press the following pushbuttons:

CGC/LGC POWER ON
400 CPS POWER ON
(Insure that PROCEED portion of PROCEED/ISS STANDBY is lighted)
PROCEED/ISS STANDBY
OPTICS POWER ON
(Wait for PROCEED portion of PROCEED/ISS OPERATE to light)

19. Press the PROCEED/ISS OPERATE pushbutton. The ISS OPERATE portion shall light and the PROCEED portion shall go out.

20. After 90 seconds have elapsed, repeat steps a and b of Table 1.

21. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 299.

22. Using the DVM and dc probes, measure and record the 28 VDC IMU Operate voltage at TPA #2 TB1-22 (hi) and TB5-39 (lo).

CAUTION: Perform step 24 immediately after step 23.

23. Remove all power from the G & N system by pressing the pushbuttons on the Test Control panel in the following sequence:

PROCEED ISS STANDBY
OIA ON/ISS POWER DISABLED
OPTICS POWER ON
CGC/LGC POWER ON
400 CPS POWER ON
G/N POWER A BUS

24. Repeat steps 18 and 19.

25. After 90 seconds have elapsed, calibrate the PAVM per steps A.1 through A.21 of JDC 18040 (MEASUREMENT OF A PHASE ANGLE).

26. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 99 and the VOLTMETER INPUT PAVM switch to SIG 2. Using direct probes, monitor the 800 cps 28V 5% Phase A at TPA #2 TB5 pin 37 (hi) and TB5 pin 33 (lo).

27. Measure and record the phase angle indicated on the PAVM per JDC 18040 steps B.1 through B.7.

28. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 99 and the VOLTMETER INPUT PAVM switch to SIG 2. Using direct probes monitor 800 cps 28V 5% Phase B at TPA #2 TB5 pin 29 (hi) and TB5 pin 33 (lo).

29. Measure and record the phase angle indicated on the PAVM per JDC 18040 steps B.1 through B.7.

30. Calculate the phase angle between steps 27 and 29.

DATE 30 JUN 66

---

31. Set the CROSSBAR CONTROL to 99 and the VOLTMETER INPUT PAVM switch to SIG 2. Using Direct probes, measure 800 cps 28V 5% Optics phase angle at TPA #2 TB5 pin 35 (hi) and TB5 pin 48 (lo). Record indication.

LOW BUS VOLTAGE

32. Set the CROSSBAR CONTROL to 75 and the VOLTMETER INPUT DVM switch to SIG 1. Adjust the G & N POWER ADJUST control for 25.8 (+0.25, -0) volts dc on the DVM. Repeat steps 2 through 16 and 25 through 31. In step 2 measure only items c, d, f, g, h, i, j, k, m, n, o and p of Table 1, in step 3 measure only items a, b, c, d, e, f, g, h, i, j and n of Table 2 and in step 7 measure only items a, b and c of Table 3.

HIGH BUS VOLTAGE

33. Set the CROSSBAR CONTROL to 75 and the VOLTMETER INPUT DVM switch to SIG 1. Adjust the G & N POWER ADJUST control for 31.8 (+0.25,-0) volts dc on the DVM. Repeat steps 2 through 16 and 25 through 31.

In step 2 measure only items c, d, f, g, h, i, j, k, m, n, o and p of Table 1, in step 3 measure only items a, b, c, d, e, f, g, h, i, j and n of Table 2 and in step 7 measure only items a, b and c of Table 3.

33A. Press OPTICS POWER ON pushbutton on the Test Control panel and the OPTICS POWER ON pushbutton shall go out.

NORMALIZATION OF SYSTEM

34. Set the CROSSBAR CONTROL to 20 and the VOLTMETER INPUT DVM switch to SIG 2.

35. Adjust the G & N POWER ADJUST control on the Test Control panel until the DVM indicates an input bus voltage of 28.0 28.0 (±0.25) vdc. Record indication.

CGC +4VDC-CONTROL 1 (ACE)

36. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 94 and the VOLTMETER INPUT DVM switch to SIG 1 and measure the voltage on the DVM. Record the indication.

37. Press the INTERFACE LOAD TEST pushbutton on the Test Selector panel. The pushbutton shall light.

38. Set the INTERFACE LOAD SELECTOR to position 7.

39. Press the TEST START pushbutton. The pushbutton shall light.

40. Set the CROSSBAR CONTROL to 94 and the VOLTMETER INPUT DVM switch to SIG 1 and measure the voltage on the DVM. Record the indication.

41. Press the TEST STOP pushbutton. The TEST START pushbutton shall go out.

42. Calculate the CGC +4 VDC voltage change.

CGC +14 VDC-CONTROL 2 (ACE)

43. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 93 and the VOLTMETER INPUT DVM switch to

DATE 30 JUN 66

JOB G & N SYSTEM POWER SUPPLIES TEST | JDC 12208 REV J PAGE 5 OF 6
SUBSYSTEM G & N SYSTEM | ASSY

SIG 2 and measure the voltage on the DVM. Record the indication.

44. Press the INTERFACE LOAD TEST pushbutton on the Test Selector panel. The pushbutton shall light.

45. Set the INTERFACE LOAD SELECTOR to position 8.

46. Press the TEST START pushbutton. The pushbutton shall light.

47. Set the CROSSBAR CONTROL to 93 and the VOLTMETER INPUT DVM switch to SIG 2 and measure the voltage on the DVM. Record the indication.

48. Press the TEST STOP pushbutton. The TEST START pushbutton shall go out.

49. Calculate the CGC +14VDC voltage change.

IMPORTANT: 1. Proceed with this JDC if JDC 12207 has been completed and system operation has not been interrupted. If system operation has been interrupted, perform JDC 12204, Part A before proceeding with this JDC.

2. Those signals listed on the Data Sheets which are starred (**) must be corrected by the "MULT BY" factor to obtain the true value. The "MULT BY" factors can be found on the GSE Signal Selection List, part number 2901077.

NOTE: When making dc measurements in steps 2 and 3, set the PAVM VOLTMETER INPUT switch and the SCOPE "A" INPUT SIGNAL switch on the Primary Signal Selector panel to OFF.

1. Establish a MASTER INITIALIZATION condition in accordance with JDC 12215. Press OPTICS POWER ON pushbutton on Test Control panel and the OPTICS POWER ON pushbutton shall light.

2. Measure signals listed in column 1 of Table 1 on the DVM by setting the CROSSBAR CONTROL to positions indicated in column 2. In addition, use the oscilloscope to measure the peak-to-peak noise in steps h, i, k, n, o and p. Record indications.

VERIFICATION WITH SIDL REQUIRED BEFORE USE

---

3. Using the Buffered and Direct probes on TPA #2, measure the signals listed in column 1 of Table 2 on the DVM by setting the CROSSBAR CONTROL to 199 for ac signals on Buffered probes and to 299 for dc signals on Direct probes.

4. Set switches and controls on the Counter as follows:

DISPLAY TIME (N_2) to 10^5
DISPLAY RESET to ZERO
CLOCK FREQUENCY DIVIDER to 10
CLOCK SELECTOR to INT
INPUT SELECTOR to C SENSE
SENSE SELECTOR to FWD
ATTEN to 10 AC
TRIGGER VOLTAGE fully counterclockwise
SAMPLE TIME (N_1) to 008000
FUNCTION to RATIO OR PERIOD

5. Insure the D SIGNAL portion of the D SIGNAL/D PULSE pushbutton on the Primary Signal Selector panel is lighted. Set the COUNTER INPUT "D" SIGNAL selector to 1.

6. Adjust the ATTEN D selector switch on the Counter to the highest attenuation level that will cause triggering. Set the TRIGGER VOLTAGE control to insure that the Counter starts and stops in about 10 seconds. The Counter should indicate about 100000.

7. Determine frequencies of the signals listed in column 1 of Table 3 by setting the COUNTER INPUT "D" SIGNAL selector on the Primary Signal Selector panel to positions indicated in column 2. Change SAMPLE TIME (N_1) setting per Table 3.

8. Connect a coaxial cable between connector J1-A and J4-F in the Auxiliary Input Panel. Set the Oscilloscope to trigger "B" TIME BASE.

9. Using the pulse probe, measure and record the peak-to-peak amplitude of 3200 pps at TPA #2 TB1-6 (hi) and TB1-9 (lo) on the Oscilloscope CHANNEL "B".

10. Set the SCOPE B INPUT 2 selector on the Oscillograph Signal Selector panel to 5 and CHANNEL 5 selector to 7. Insure that CH5 AC pushbutton is lighted.

11. Set the DUAL-TRACE AMPLIFIER MODE selector on the Oscilloscope to ALTER. Set the VOLTS/DIV selector for CH 1 to 2 and CH 2 to 10.

12. Pull out TRIGGER CH 1 ONLY switch on the Dual Trace Amplifier.

13. Set the TIME BASE "B" controls as follows:

TIME/DIV to .1 m sec
TRIGGER to LOWER BEAM
COUPLING AC FAST to AC
SLOPE to +
LEVEL - to see trace
B MODE to NORMAL TRIGGER

14. Set switches CH 1 and CH 2 on the Oscilloscope to GND and position both traces to coincidence. Position the coincidence of sweeps to the center of the scope grid pattern.

15. Set the TIME BASE "B" TIME/DIV control to 50 µsec and pull 10X MAG POSITION control. Set CH 1 and CH 2 switches to AC.

---

16. Measure and record the time difference between the leading edge of the 3200 PPS set pulse and the first positive going zero crossover to the 28V, 3200 cps signal.

CAUTION: Perform step 18 immediately after step 17.

17. Remove all power from the G & N system by pressing the pushbuttons on the Test Control panel in the following sequence:

PROCEED/ISS STANDBY
OIA ON/ISS POWER DISABLED
OPTICS POWER ON
CGC/LGC POWER ON
400 CPS POWER ON
G/N POWER B BUS

NOTE: If necessary, press RSET pushbutton on DSKY and RESET pushbutton on Programmer and Monitor panel to clear alarm indications that may occur in step 18.

18. Press the following pushbuttons:

CGC/LGC POWER ON
400 CPS POWER ON
(Insure that PROCEED portion of PROCEED/ISS STANDBY is lighted)
PROCEED/ISS STANDBY
OPTICS POWER ON
(Wait for PROCEED portion of PROCEED/ISS OPERATE to light)

19. Press the PROCEED/ISS OPERATE pushbutton. The ISS OPERATE portion shall light and the PROCEED portion shall go out.

20. After 90 seconds have elapsed, repeat steps a and b of Table 1.

21. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 299.

22. Using the DVM and dc probes, measure and record the 28 VDC IMU Operate voltage at TPA #2 TB1-22 (hi) and TB5-39 (lo).

CAUTION: Perform step 24 immediately after step 23.

23. Remove all power from the G & N system by pressing the pushbuttons on the Test Control panel in the following sequence:

PROCEED/ISS STANDBY
OIA ON/ISS POWER DISABLED
OPTICS POWER ON
CGC/LGC POWER ON
400 CPS POWER ON
G/N POWER A BUS

24. Repeat steps 18 and 19.

25. After 90 seconds have elapsed, calibrate the PAVM per steps A.1 through A.21 of JDC 18040 (MEASUREMENT OF A PHASE ANGLE).

26. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 99 and the VOLTMETER INPUT PAVM switch to SIG 2. Using direct probes, monitor the 800 cps 28V 5% Phase A at TPA #2 TB5 pin 37 (hi) and TB5 pin 33 (lo).

27. Measure and record the phase angle indicated on the PAVM per JDC 18040 steps B.1 through B.7.

28. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 99 and the VOLTMETER INPUT PAVM switch to SIG 2. Using direct probes monitor 800 cps 28V 5% Phase B at TPA #2 TB5 pin 29 (hi) and TB5 pin 33 (lo).

29. Measure and record the phase angle indicated on the PAVM per JDC 18040 steps B.1 through B.7.

30. Calculate the phase angle between steps 27 and 29.

---

31. Set the CROSSBAR CONTROL to 99 and the VOLTMETER INPUT PAVM switch to SIG 2. Using Direct probes, measure 800 cps 28V 5% Optics phase angle at TPA #2 TB5 pin 35 (hi) and TB5 pin 48 (lo). Record indication.

LOW BUS VOLTAGE

32. Set the CROSSBAR CONTROL to 75 and the VOLTMETER INPUT DVM switch to SIG 1. Adjust the G & N POWER ADJUST control for 25.8 (+0.25, -0) volts dc on the DVM. Repeat steps 2 through 16 and 25 through 31. In step 2 measure only items c, d, f, g, h, i, j, k, m, n, o and p of Table 1, in step 3 measure only items a, b, c, d, e, f, g, h, i, j and n of Table 2 and in step 7 measure only items a, b and c of Table 3.

HIGH BUS VOLTAGE

33. Set the CROSSBAR CONTROL to 75 and the VOLTMETER INPUT DVM switch to SIG 1. Adjust the G & N POWER ADJUST control for 31.8 (+0.25,-0) volts dc on the DVM. Repeat steps 2 through 16 and 25 through 31.

In step 2 measure only items c, d, f, g, h, i, j, k, m, n, o and p of Table 1, in step 3 measure only items a, b, c, d, e, f, g, h, i, j and n of Table 2 and in step 7 measure only items a, b and c of Table 3.

33A. Press OPTICS POWER ON pushbutton on the Test Control panel and the OPTICS POWER ON pushbutton shall go out.

NORMALIZATION OF SYSTEM

34. Set the CROSSBAR CONTROL to 20 and the VOLTMETER INPUT DVM switch to SIG 2.

35. Adjust the G & N POWER ADJUST control on the Test Control panel until the DVM indicates an input bus voltage of 28.0 (±0.25) vdc. Record indication.

CGC +4VDC-CONTROL 1 (ACE)

36. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 94 and the VOLTMETER INPUT DVM switch to SIG 1 and measure the voltage on the DVM. Record the indication.

37. Press the INTERFACE LOAD TEST pushbutton on the Test Selector panel. The pushbutton shall light.

38. Set the INTERFACE LOAD SELECTOR to position 7.

39. Press the TEST START pushbutton. The pushbutton shall light.

40. Set the CROSSBAR CONTROL to 94 and the VOLTMETER INPUT DVM switch to SIG 1 and measure the voltage on the DVM. Record the indication.

41. Press the TEST STOP pushbutton. The TEST START pushbutton shall go out.

42. Calculate the CGC +4 VDC voltage change.

CGC +14 VDC-CONTROL 2 (ACE)

43. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 93 and the VOLTMETER INPUT DVM switch to

JOB G & N SYSTEM POWER SUPPLIES TEST | JDC 12208 REV K PAGE 5 OF 6

SUBSYSTEM G & N SYSTEM | ASSY

SIG 2 and measure the voltage on the DVM. Record the indication.

44. Press the INTERFACE LOAD TEST pushbutton on the Test Selector panel. The pushbutton shall light.

45. Set the INTERFACE LOAD SELECTOR to position 8.

46. Press the TEST START pushbutton. The pushbutton shall light.

47. Set the CROSSBAR CONTROL to 93 and the VOLTMETER INPUT DVM switch to SIG 2 and measure the voltage on the DVM. Record the indication.

48. Press the TEST STOP pushbutton. The TEST START pushbutton shall go out.

49. Calculate the CGC +14VDC voltage change.

INTERVAL

TOOLS AND MATERIAL

IMPORTANT: 1. Proceed with this JDC if JDC 12207 has been completed and system operation has not been interrupted. If system operation has been interrupted, perform JDC 12204, Part A before proceeding with this JDC.

2. Those signals listed on the Data Sheets which are starred (**) must be corrected by the "MULT BY" factor to obtain the true value. The "MULT BY" factors can be found on the GSE Signal Selection List, part number 2901077.

NOTE: When making dc measurements in steps 2 and 3, set the PAVM VOLTMETER INPUT switch and the SCOPE "A" INPUT SIGNAL switch on the Primary Signal Selector panel to OFF.

1. Establish a MASTER INITIALIZATION condition in accordance with JDC 12215. Press OPTICS POWER ON pushbutton on Test Control panel and the OPTICS POWER ON pushbutton shall light.

2. Measure signals listed in column 1 of Table 1 on the DVM by setting the CROSSBAR CONTROL to positions indicated in column 2. In addition, use the oscilloscope to measure the peak-to-peak noise in steps h, i, k, n, o and p. Record indications.

VERIFICATION WITH SIDL REQUIRED BEFORE USE

DATE 30 JUN 66

JOB G & N SYSTEM POWER SUPPLIES TEST | JDC 12208 REV L PAGE 2 OF 6

SUBSYSTEM G & N SYSTEM | ASSY

3. Using the Buffered and Direct probes on TPA #2, measure the signals listed in column 1 of Table 2 on the DVM by setting the CROSSBAR CONTROL to 199 for ac signals on Buffered probes and to 299 for dc signals on Direct probes. Record indications.

4. Set switches and controls on the Counter as follows:

DISPLAY TIME (N_2) to 10^5
DISPLAY RESET to ZERO
CLOCK FREQUENCY DIVIDER to 10
CLOCK SELECTOR to INT
INPUT SELECTOR to C SENSE
SENSE SELECTOR to FWD
ATTEN to 10 AC
TRIGGER VOLTAGE fully counterclockwise
SAMPLE TIME (N_1) to 008000
FUNCTION to RATIO OR PERIOD

5. Insure the D SIGNAL portion of the D SIGNAL/D PULSE pushbutton on the Primary Signal Selector panel is lighted. Set the COUNTER INPUT "D" SIGNAL selector to 1.

6. Adjust the ATTEN D selector switch on the Counter to the highest attenuation level that will cause triggering. Set the TRIGGER VOLTAGE control to insure that the Counter starts and stops in about 10 seconds. The Counter should indicate about 100000.

7. Determine frequencies of the signals listed in column 1 of Table 3 by setting the COUNTER INPUT "D" SIGNAL selector on the Primary Signal Selector panel to positions indicated in column 2. Change SAMPLE TIME (N_1) setting per Table 3. Record indications.

8. Connect a coaxial cable between connector J1-A and J4-F in the Auxiliary Input Panel. Set the Oscilloscope to trigger "B" TIME BASE.

9. Using the pulse probe, measure and record the peak-to-peak amplitude of 3200 pps at TPA #2 TB1-6 (hi) and TB1-9 (lo) on the Oscilloscope CHANNEL "B".

10. Set the SCOPE B INPUT 2 selector on the Oscillograph Signal Selector panel to 5 and CHANNEL 5 selector to 7. Insure that CH5 AC pushbutton is lighted.

11. Set the DUAL-TRACE AMPLIFIER MODE selector on the Oscilloscope to ALTER. Set the VOLTS/DIV selector for CH 1 to 2 and CH 2 to 10.

12. Pull out TRIGGER CH 1 ONLY switch on the Dual Trace Amplifier.

13. Set the TIME BASE "B" controls as follows:

TIME/DIV to .1 m sec
TRIGGER to LOWER BEAM
COUPLING AC FAST to AC
SLOPE to +
LEVEL - to see trace
B MODE to NORMAL TRIGGER

14. Set switches CH 1 and CH 2 on the Oscilloscope to GND and position both traces to coincidence. Position the coincidence of sweeps to the center of the scope grid pattern.

15. Set the TIME BASE "B" TIME/DIV control to 50 µsec and pull 10X MAG POSITION control. Set CH 1 and CH 2 switches to AC.

DATE 30 JUN 66

JOB G & N SYSTEM POWER SUPPLIES TEST | JDC 12208 REV L PAGE 3 OF 6

SUBSYSTEM G & N SYSTEM | ASSY

16. Measure and record the time difference between the leading edge of the 3200 PPS set pulse and the first positive going zero crossover to the 28V, 3200 cps signal.

CAUTION: Perform step 18 immediately after step 17.

17. Remove all power from the G & N system by pressing the pushbuttons on the Test Control panel in the following sequence:

PROCEED/ISS STANDBY
OIA ON/ISS POWER DISABLED
OPTICS POWER ON
CGC/LGC POWER ON
400 CPS POWER ON
G/N POWER B BUS

NOTE: If necessary, press RSET pushbutton on DSKY and RESET pushbutton on Programmer and Monitor panel to clear alarm indications that may occur in step 18.

18. Press the following pushbuttons:

CGC/LGC POWER ON
400 CPS POWER ON
(Insure that PROCEED portion of PROCEED/ISS STANDBY is lighted)
PROCEED/ISS STANDBY
OPTICS POWER ON
(Wait for PROCEED portion of PROCEED/ISS OPERATE to light)

19. Press the PROCEED/ISS OPERATE pushbutton. The ISS OPERATE portion shall light and the PROCEED portion shall go out.

20. After 90 seconds have elapsed, repeat steps a and b of Table 1. Record indications.

21. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 299.

22. Using the DVM and dc probes, measure and record the 28 VDC IMU Operate voltage at TPA #2 TB1-22 (hi) and TB5-39 (lo).

CAUTION: Perform step 24 immediately after step 23.

23. Remove all power from the G & N system by pressing the pushbuttons on the Test Control panel in the following sequence:

PROCEED/ISS STANDBY
OIA ON/ISS POWER DISABLED
OPTICS POWER ON
CGC/LGC POWER ON
400 CPS POWER ON
G/N POWER A BUS

24. Repeat steps 18 and 19.

25. After 90 seconds have elapsed, calibrate the PAVM per steps A.1 through A.21 of JDC 18040 (MEASUREMENT OF A PHASE ANGLE).

26. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 99 and the VOLTMETER INPUT PAVM switch to SIG 2. Using direct probes, monitor the 800 cps 28V 5% Phase A at TPA #2 TB5 pin 37 (hi) and TB5 pin 33 (lo).

27. Measure and record the phase angle indicated on the PAVM per JDC 18040 steps B.1 through B.7.

28. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 99 and the VOLTMETER INPUT PAVM switch to SIG 2. Using direct probes monitor 800 cps 28V 5% Phase B at TPA #2 TB5 pin 29 (hi) and TB5 pin 33 (lo).

29. Measure and record the phase angle indicated on the PAVM per JDC 18040 steps B.1 through B.7.

30. Calculate the phase angle between steps 27 and 29.

DATE 30 JUN 66

JOB G & N SYSTEM POWER SUPPLIES TEST | JDC 12208 REV L PAGE 4 OF 6

SUBSYSTEM G & N SYSTEM | ASSY

31. Set the CROSSBAR CONTROL to 99 and the VOLTMETER INPUT PAVM switch to SIG 2. Using Direct probes, measure 800 cps 28V 5% Optics phase angle at TPA #2 TB5 pin 35 (hi) and TB5 pin 48 (lo). Record indication.

LOW BUS VOLTAGE

32. Set the CROSSBAR CONTROL to 75 and the VOLTMETER INPUT DVM switch to SIG 1. Adjust the G & N POWER ADJUST control for 25.8 (+0.25, -0) volts dc on the DVM. Repeat steps 2 through 16 and 25 through 31. In step 2 measure only items c, d, f, g, h, i, j, k, m, n, o and p of Table 1, in step 3 measure only items a, b, c, d, e, f, g, h, i, j and n of Table 2 and in step 7 measure only items a, b and c of Table 3.

HIGH BUS VOLTAGE

33. Set the CROSSBAR CONTROL to 75 and the VOLTMETER INPUT DVM switch to SIG 1. Adjust the G & N POWER ADJUST control for 31.8 (+0, -0.25) volts dc on the DVM. Repeat steps 2 through 16 and 25 through 31.

In step 2 measure only items c, d, f, g, h, i, j, k, m, n, o and p of Table 1, in step 3 measure only items a, b, c, d, e, f, g, h, i, j and n of Table 2 and in step 7 measure only items a, b and c of Table 3.

33A. Press OPTICS POWER ON pushbutton on the Test Control panel and the OPTICS POWER ON pushbutton shall go out.

NORMALIZATION OF SYSTEM

34. Set the CROSSBAR CONTROL to 20 and the VOLTMETER INPUT DVM switch to SIG 2.

35. Adjust the G & N POWER ADJUST control on the Test Control panel until the DVM indicates an input bus voltage of 28.0 (±0.25) vdc. Record indication.

CGC +4VDC-CONTROL 1 (ACE)

36. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 94 and the VOLTMETER INPUT DVM switch to SIG 1 and measure the voltage on the DVM. Record the indication.

37. Press the INTERFACE LOAD TEST pushbutton on the Test Selector panel. The pushbutton shall light.

38. Set the INTERFACE LOAD SELECTOR to position 7.

39. Press the TEST START pushbutton. The pushbutton shall light.

40. Set the CROSSBAR CONTROL to 94 and the VOLTMETER INPUT DVM switch to SIG 1 and measure the voltage on the DVM. Record the indication.

41. Press the TEST STOP pushbutton. The TEST START pushbutton shall go out.

42. Calculate the CGC +4 VDC voltage change.

CGC +14 VDC-CONTROL 2 (ACE)

43. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 93 and the VOLTMETER INPUT DVM switch to

DATE 30 JUN 66

JOB G & N SYSTEM POWER SUPPLIES TEST | JDC 12208 REV L PAGE 5 OF 6

SUBSYSTEM G & N SYSTEM | ASSY

SIG 2 and measure the voltage on the DVM. Record the indication.

44. Deleted

45. Set the INTERFACE LOAD SELECTOR to position 8.

46. Press the TEST START pushbutton. The pushbutton shall light.

47. Set the CROSSBAR CONTROL to 93 and the VOLTMETER INPUT DVM switch to SIG 2 and measure the voltage on the DVM. Record the indication.

48. Press the TEST STOP pushbutton. The TEST START pushbutton shall go out. Press the INTERFACE LOAD TEST pushbutton on the Test Selector panel. The pushbutton shall go out.

49. Calculate the CGC +14VDC voltage change.

IMPORTANT See Below

INTERVAL

TOOLS AND MATERIAL

IMPORTANT: 1. Proceed with this JDC if JDC 12207 has been completed and system operation has not been interrupted. If system operation has been interrupted, perform JDC 12204, Part A before proceeding with this JDC.

2. Those signals listed on the Data Sheets which are starred (**) must be corrected by the "MULT BY" factor to obtain the true value. The "MULT BY" factors can be found on the GSE Signal Selection List, part number 2901077.

NOTE: When making dc measurements in steps 2 and 3, set the PAVM VOLTMETER INPUT switch and the SCOPE "A" INPUT SIGNAL switch on the Primary Signal Selector panel to OFF.

1. Establish a MASTER INITIALIZATION condition in accordance with JDC 12215. Press OPTICS POWER ON pushbutton on Test Control panel and the OPTICS POWER ON pushbutton shall light.

2. Measure signals listed in column 1 of Table 1 on the DVM by setting the CROSSBAR CONTROL to positions indicated in column 2. In addition, use the oscilloscope to measure the peak-to-peak noise in steps h, i, k, n, o and p. Record indications.

VERIFICATION WITH SIDL REQUIRED BEFORE USE

DATE 30 JUN 66

JOB G & N SYSTEM POWER SUPPLIES TEST | JDC 12208 REV M PAGE 2 OF 7

SUBSYSTEM G & N SYSTEM | ASSY

3. Using the Buffered and Direct probes on TPA #2, measure the signals listed in column 1 of Table 2 on the DVM by setting the CROSSBAR CONTROL to 199 for ac signals on Buffered probes and to 299 for dc signals on Direct probes. Record indications.

4. Set switches and controls on the Counter as follows:

- DISPLAY TIME (N_2) to 10^5
- DISPLAY RESET to ZERO
- CLOCK FREQUENCY DIVIDER to 10
- CLOCK SELECTOR to INT
- INPUT SELECTOR to C SENSE
- SENSE SELECTOR to FWD
- ATTEN to 10 AC
- TRIGGER VOLTAGE fully counterclockwise
- SAMPLE TIME (N_1) to 008000
- FUNCTION to RATIO OR PERIOD

5. Insure the D SIGNAL portion of the D SIGNAL/D PULSE pushbutton on the Primary Signal Selector panel is lighted. Set the COUNTER INPUT "D" SIGNAL selector to 1.

6. Adjust the ATTEN D selector switch on the Counter to the highest attenuation level that will cause triggering. Set the TRIGGER VOLTAGE control to insure that the Counter starts and stops in about 10 seconds. The Counter should indicate about 100000.

7. Determine frequencies of the signals listed in column 1 of Table 3 by setting the COUNTER INPUT "D" SIGNAL selector on the Primary Signal Selector panel to positions indicated in column 2. Change SAMPLE TIME (N_1) setting per Table 3. Record indications.

8. Connect a coaxial cable between connector J1-A and J4-F in the Auxiliary Input Panel. Set the Oscilloscope to trigger "B" TIME BASE.

9. Using the pulse probe, measure and record the peak-to-peak amplitude of 3200 pps at TPA #2 TB1-6 (hi) and TB1-9 (lo) on the Oscilloscope CHANNEL "B".

10. Set the SCOPE B INPUT 2 selector on the Oscillograph Signal Selector panel to 5 and CHANNEL 5 selector to 7. Insure that CH5 AC pushbutton is lighted.

11. Set the DUAL-TRACE AMPLIFIER MODE selector on the Oscilloscope to ALTER. Set the VOLTS/DIV selector for CH 1 to 2 and CH 2 to 10.

12. Pull out TRIGGER CH 1 ONLY switch on the Dual Trace Amplifier.

13. Set the TIME BASE "B" controls as follows:

- TIME/DIV to .1 m sec
- TRIGGER to LOWER BEAM
- COUPLING AC FAST to AC
- SLOPE to +
- LEVEL - to see trace
- B MODE to NORMAL TRIGGER

14. Set switches CH 1 and CH 2 on the Oscilloscope to GND and position both traces to coincidence. Position the coincidence of sweeps to the center of the scope grid pattern.

15. Set the TIME BASE "B" TIME/DIV control to 50 µsec and pull 10X MAG POSITION control. Set CH 1 and CH 2 switches to AC.

DATE 30 JUN 66

JOB G & N SYSTEM POWER SUPPLIES TEST | JDC 12208 REV M PAGE 3 OF 7

SUBSYSTEM G & N SYSTEM | ASSY

16. Measure and record the time difference between the leading edge of the 3200 PPS set pulse and the first positive going zero crossover to the 28V, 3200 cps signal.

CAUTION: Perform step 18 immediately after step 17.

17. Remove all power from the G & N system by pressing the pushbuttons on the Test Control panel in the following sequence:

- PROCEED/ISS STANDBY
- OIA ON/ISS POWER DISABLED
- OPTICS POWER ON
- CGC/LGC POWER ON
- 400 CPS POWER ON
- G/N POWER B BUS

NOTE: If necessary, press RSET pushbutton on DSKY and RESET pushbutton on Programmer and Monitor panel to clear alarm indications that may occur in step 18.

18. Press the following pushbuttons:

- CGC/LGC POWER ON
- 400 CPS POWER ON
  - (Insure that PROCEED portion of PROCEED/ISS STANDBY is lighted)
- PROCEED/ISS STANDBY
- OPTICS POWER ON
  - (Wait for PROCEED portion of PROCEED/ISS OPERATE to light)

NOTE: Step 18A applies only if Restart Monitor module (2898989) is installed.

18A. Perform the following DSKY operations:

a. VERB 21 NOUN 10 ENTR
b. 00077 ENTR
c. 00000 ENTR

19. Press the PROCEED/ISS OPERATE pushbutton. The ISS OPERATE portion shall light and the PROCEED portion shall go out.

20. After 90 seconds have elapsed, repeat steps a and b of Table 1. Record indications.

21. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 299.

22. Using the DVM and dc probes, measure and record the 28 VDC IMU Operate voltage at TPA #2 TB1-22 (hi) and TB5-39 (lo).

CAUTION: Perform step 24 immediately after step 23.

23. Remove all power from the G & N system by pressing the pushbuttons on the Test Control panel in the following sequence:

- PROCEED/ISS STANDBY
- OIA ON/ISS POWER DISABLED
- OPTICS POWER ON
- CGC/LGC POWER ON
- 400 CPS POWER ON
- G/N POWER A BUS

24. Repeat steps 18 and 19.

25. After 90 seconds have elapsed, calibrate the PAVM per steps A.1 through A.21 of JDC 18040 (MEASUREMENT OF A PHASE ANGLE).

26. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 99 and the VOLTMETER INPUT PAVM switch to SIG 2. Using direct probes, monitor the 800 cps 28V 5% Phase A at TPA #2 TB5 pin 37 (hi) and TB5 pin 33 (lo).

27. Measure and record the phase angle indicated on the PAVM per JDC 18040 steps B.1 through B.7.

DATE 30 JUN 66

JOB G & N SYSTEM POWER SUPPLIES TEST | JDC 12208 REV M PAGE 4 OF 7

SUBSYSTEM G & N SYSTEM | ASSY

28. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 99 and the VOLTMETER INPUT PAVM switch to SIG 2. Using direct probes monitor 800 cps 28V 5% Phase B at TPA #2 TB5 pin 29 (hi) and TB5 pin 33 (lo).

29. Measure and record the phase angle indicated on the PAVM per JDC 18040 steps B.1 through B.7.

30. Calculate the phase angle between steps 27 and 29.

31. Set the CROSSBAR CONTROL to 99 and the VOLTMETER INPUT PAVM switch to SIG 2. Using Direct probes, measure 800 cps 28V 5% Optics phase angle at TPA #2 TB5 pin 35 (hi) and TB5 pin 48 (lo). Record indication.

LOW BUS VOLTAGE

32. Set the CROSSBAR CONTROL to 75 and the VOLTMETER INPUT DVM switch to SIG 1. Adjust the G & N POWER ADJUST control for 25.8 (+0.25, -0) volts dc on the DVM. Repeat steps 2 through 16 and 25 through 31. In step 2 measure only items c, d, f, g, h, i, j, k, m, n, o and p of Table 1, in step 3 measure only items a, b, c, d, e, f, g, h, i, j and n of Table 2 and in step 7 measure only items a, b and c of Table 3.

HIGH BUS VOLTAGE

33. Set the CROSSBAR CONTROL to 75 and the VOLTMETER INPUT DVM switch to SIG 1. Adjust the G & N POWER ADJUST control for 31.8 (+0, -0.25) volts dc on the DVM. Repeat steps 2 through 16 and 25 through 31. In step 2 measure only items c, d, f, g, h, i, j, k, m, n, o and p of Table 1, in step 3 measure only items a, b, c, d, e, f, g, h, i, j and n of Table 2 and in step 7 measure only items a, b and c of Table 3.

33A. Press OPTICS POWER ON pushbutton on the Test Control panel and the OPTICS POWER ON pushbutton shall go out.

NORMALIZATION OF SYSTEM

34. Set the CROSSBAR CONTROL to 20 and the VOLTMETER INPUT DVM switch to SIG 2.

35. Adjust the G & N POWER ADJUST control on the Test Control panel until the DVM indicates an input bus voltage of 28.0 (±0.25) vdc. Record indication.

CGC +4VDC-CONTROL 1 (ACE)

36. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 94 and the VOLTMETER INPUT DVM switch to SIG 1 and measure the voltage on the DVM. Record the indication.

37. Press the INTERFACE LOAD TEST pushbutton on the Test Selector panel. The pushbutton shall light.

38. Set the INTERFACE LOAD SELECTOR to position 7.

39. Press the TEST START pushbutton. The pushbutton shall light.

40. Set the CROSSBAR CONTROL to 94 and the VOLTMETER INPUT DVM switch to SIG 1 and measure the voltage on the DVM. Record the indication.

DATE 30 JUN 66

41. Press the TEST STOP pushbutton. The TEST START pushbutton shall go out.

42. Calculate the CGC +4 VDC voltage change.

CGC +14 VDC-CONTROL 2 (ACE)

43. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 93 and the VOLTMETER INPUT DVM switch to SIG 2 and measure the voltage on the DVM. Record the indication.

44. Deleted

45. Set the INTERFACE LOAD SELECTOR to position 8.

46. Press the TEST START pushbutton. The pushbutton shall light.

47. Set the CROSSBAR CONTROL to 93 and the VOLTMETER INPUT DVM switch to SIG 2 and measure the voltage on the DVM. Record the indication.

48. Press the TEST STOP pushbutton. The TEST START pushbutton shall go out. Press the INTERFACE LOAD TEST pushbutton on the Test Selector panel. The pushbutton shall go out.

49. Calculate the CGC +14VDC voltage change.

NOTE: Step 50 applies only if Restart Monitor module (2898989) is installed.

50. Perform the following DSKY operations:

a. VERB 01 NOUN 10 ENTR

b. 00077 ENTR

c. The contents of Row 1 shall be 00000.

Table 1

SIGNAL	CROSSBAR CONTROL
a. 28 volts dc OPERATE/IMU	269
	220
b. 28 volts dc OPTICS	200
c. IMU 28 V 800 cps 1%	121
d. OPTICS 28 V 800 cps 1%	101
e. +28 VDC Computer TP	193
f. 28 V 3200 cps Feedback	123
g. -28 volts dc	124
h. CGC +4 volts dc	194
i. CGC +14.0 volts dc	293
j. 120 VDC PIP	259
*k. CDU +4 volts dc	118

*When recording the CDU +4 volts dc noise measurement ignore spike levels appearing at a rate of 120 cps.

JOB G & N SYSTEM POWER SUPPLIES TEST | JDC 12208 REV. - PAGE 1 OF 6
INITIAL TDRR 29882 D.S. PGS 10

SUBSYSTEM G & N SYSTEM | ASSY.

DESCRIPTION Power supply amplitude and phase relationship is checked.

Rev. Let.	Date	TDRR NO.	PAGES REVISED JDC	PAGES REVISED D.S.	APPROVAL MIT	APPROVAL NASA	REFERENCES
							IMPORTANT See Below
							INTERVAL
							TOOLS AND MATERIAL

IMPORTANT: 1. Proceed with this JDC if JDC 12207 has been completed and system operation has not been interrupted. If system operation has been interrupted, perform JDC 12204, Part A before proceeding with this JDC.

2. Those signals listed on the Data Sheets which are starred (**) must be corrected by the "MULT BY" factor to obtain the true value.

NOTE: When making dc measurements in steps 2 and 3, set the PAVM VOLTMETER INPUT switch and the SCOPE "A" INPUT SIGNAL switch on the Primary Signal Selector panel to OFF.

1. Establish a MASTER INITIALIZATION condition.

2. Measure signals listed in column 1 of Table 1 on the DVM by setting the CROSSBAR CONTROL to positions indicated in column 2. In addition, use the oscilloscope to measure the peak-to-peak noise in steps h, i, k, n, o and p. Record indications.

VERIFICATION WITH SIDL REQUIRED BEFORE USE

DATE ______

JOB G & N SYSTEM POWER SUPPLIES TEST | JDC 12208 REV - PAGE 2 OF 6

SUBSYSTEM G & N SYSTEM | ASSY

3. Using the Buffered and Direct probes on TPA #2, measure the signals listed in column 1 of Table 2 on the DVM by setting the CROSSBAR CONTROL to 199 for ac signals on Buffered probes and to 299 for dc signals on Direct probes.

4. Set switches and controls on the Counter as follows:

DISPLAY TIME (N_2) to 10^5
DISPLAY RESET to ZERO
CLOCK FREQUENCY DIVIDER to 10
CLOCK SELECTOR to INT
INPUT SELECTOR to C SENSE
SENSE SELECTOR to FWD
ATTEN to 10 AC
TRIGGER VOLTAGE fully counterclockwise
SAMPLE TIME (N_1) to 008000
FUNCTION to RATIO OR PERIOD

5. Insure the D SIGNAL portion of the D SIGNAL/D PULSE pushbutton on the Primary Signal Selector panel is lighted. Set the COUNTER INPUT "D" SIGNAL selector to 1.

6. Adjust the ATTEN D selector switch on the Counter to the highest attenuation level that will cause triggering. Set the TRIGGER VOLTAGE control to insure that the Counter starts and stops in about 10 seconds. The Counter should indicate about 100000.

7. Determine frequencies of the signals listed in column 1 of Table 3 by setting the COUNTER INPUT "D" SIGNAL selector on the Primary Signal Selector panel to positions indicated in column 2. Change SAMPLE TIME (N_1) setting per Table 3.

8. Connect a coaxial cable between connector J1-A and J4-F in the Auxiliary Input Panel. Set the Oscilloscope to trigger "B" TIME BASE.

9. Using the pulse probe, measure and record the peak-to-peak amplitude of 3200 pps at TPA #2 TB1-6 (hi) and TB1-9 (lo) on the Oscilloscope CHANNEL "B".

10. Set the SCOPE B INPUT 2 selector on the Oscillograph Signal Selector panel to 5 and CHANNEL 5 selector to 7. Insure that CH5 AC pushbutton is lighted.

11. Set the DUAL-TRACE AMPLIFIER MODE selector on the Oscilloscope to ALTER. Set the VOLTS/DIV selector for CH 1 to 2 and CH 2 to 10.

12. Pull out TRIGGER CH 1 ONLY switch on the Dual Trace Amplifier.

13. Set the TIME BASE "B" controls as follows:

TIME/DIV to .1 m sec
TRIGGER to LOWER BEAM
COUPLING AC FAST to AC
SLOPE to +
LEVEL - to see trace
B MODE to NORMAL TRIGGER

14. Set switches CH 1 and CH 2 on the Oscilloscope to GND and position both traces to coincidence. Position the coincidence of sweeps to the center of the scope grid pattern.

15. Set the TIME BASE "B" TIME/DIV control to 50 μsec and pull 10X MAG POSITION control. Set CH 1 and CH 2 switches to AC.

DATE ______

JOB G & N SYSTEM POWER SUPPLIES TEST | JDC 12208 REV - PAGE 3 OF 6

SUBSYSTEM G & N SYSTEM | ASSY

16. Measure and record the time difference between the leading edge of the 3200 PPS set pulse and the first positive going zero crossover to the 28V, 3200 cps signal.

CAUTION: Perform step 18 immediately after step 17

17. Remove all power from the G & N system by pressing the pushbuttons on the Test Control panel in the following sequence:

PROCEED ISS STANDBY
OIA ON/ISS POWER DISABLED
OPTICS POWER ON
CGC/LGC POWER ON
400 CPS POWER ON
G/N POWER B BUS

18. Press the following pushbuttons:

CGC/LGC POWER ON
400 CPS POWER ON
(Wait for PROCEED portion to light)
PROCEED/ISS STANDBY
OPTICS POWER ON
(Wait for PROCEED portion to light)

19. Press the PROCEED/ISS OPERATE pushbutton. The ISS OPERATE portion shall light and the PROCEED portion shall go out.

20. Repeat steps a and b of Table 1.

21. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 299.

22. Using the DVM and dc probes, measure and record the 28 VDC IMU Operate voltage at TPA #2 TB1-22 (hi) and TB5-39 (lo).

CAUTION: Perform step 24 immediately after step 23.

23. Remove all power from the G & N system by pressing the pushbuttons on the Test Control panel in the following sequence:

PROCEED ISS STANDBY
OIA ON/ISS POWER DISABLED
OPTICS POWER ON
CGC/LGC POWER ON
400 CPS POWER ON
G/N POWER A BUS

24. Repeat steps 18 and 19.

25. Calibrate the PAVM per steps A.1 through A.21 of JDC 18040 (MEASUREMENT OF A PHASE ANGLE).

26. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 99 and the VOLTMETER INPUT PAVM switch to SIG 2. Using direct probes, monitor the 800 cps 28V 5% Phase A at TPA #2 TB5 pin 37 (hi) and TB5 pin 33 (lo).

27. Measure and record the phase angle indicated on the PAVM per JDC 18040 steps B.1 through B.7.

28. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 99 and the VOLTMETER INPUT PAVM switch to SIG 2. Using direct probes monitor 800 cps 28V 5% Phase B at TPA #2 TB5 pin 29 (hi) and TB5 pin 33 (lo).

29. Measure and record the phase angle indicated on the PAVM per JDC 18040 steps B.1 through B.7.

30. Calculate the phase angle between steps 27 and 29.

DATE ______

JOB G & N SYSTEM POWER SUPPLIES TEST | JDC 12208 REV - PAGE 4 OF 6

SUBSYSTEM G & N SYSTEM | ASSY

31. Set the CROSSBAR CONTROL to 99 and the VOLTMETER INPUT PAVM switch to SIG 2. Using Direct probes, measure 800 cps 28V 5% Optics phase angle at TPA #2 TB5 pin 35 (hi) and TB5 pin 48 (lo). Record indication.

LOW BUS VOLTAGE

32. Set the CROSSBAR CONTROL to 75 and the VOLTMETER INPUT DVM switch to SIG 1. Adjust the G & N POWER ADJUST control for 25.8 (+0.25, -0) volts dc on the DVM. Repeat steps 2 through 16 and 25 through 31. In step 2 measure only items c, d, f, g, h, i, j, k, m, n, o and p of Table 1, in step 3 measure only items a, b, c, d, e, f, g, h, i, j and n of Table 2 and in step 7 measure only items a, b and c of Table 3.

HIGH BUS VOLTAGE

33. Set the CROSSBAR CONTROL to 75 and the VOLTMETER INPUT DVM switch to SIG 1. Adjust the G & N POWER ADJUST control for 30.8 (+0, -0.25) volts dc on the DVM. Repeat steps 2 through 16 and 25 through 31.

In step 2 measure only items c, d, f, g, h, i, j, k, m, n, o and p of Table 1, in step 3 measure only items a, b, c, d, e, f, g, h, i, j and n of Table 2 and in step 7 measure only items a, b and c of Table 3.

NORMALIZATION OF SYSTEM

34. Set the CROSSBAR CONTROL to 20 and the VOLTMETER INPUT DVM switch to SIG 2.

35. Adjust the G & N POWER ADJUST control on the Test Control panel until the DVM indicates an input bus voltage of 28.0 28.0 (±0.25) vdc. Record indication.

CGC +4VDC-CONTROL 1 (ACE)

36. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 94 and the VOLTMETER INPUT DVM switch to SIG 1 and measure the voltage on the DVM. Record the indication.

37. Press the INTERFACE LOAD TEST pushbutton on the Test Selector panel. The pushbutton shall light.

38. Set the INTERFACE LOAD SELECTOR to position 7.

39. Press the TEST START pushbutton. The pushbutton shall light.

40. Set the CROSSBAR CONTROL to 94 and the VOLTMETER INPUT DVM switch to SIG 1 and measure the voltage on the DVM. Record the indication.

41. Press the TEST STOP pushbutton. The TEST START pushbutton shall go out.

42. Calculate the CGC +4 VDC voltage change.

CGC +14 VDC-CONTROL 2 (ACE)

43. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 93 and the VOLTMETER INPUT DVM switch to SIG 2 and measure the voltage on the DVM. Record the indication.

44. Press the INTERFACE LOAD TEST pushbutton on the Test Selector panel. The pushbutton shall light.

DATE ______

JOB G & N SYSTEM POWER SUPPLIES TEST | JDC 12208 REV - PAGE 5 OF 6
SUBSYSTEM G & N SYSTEM | ASSY

45. Set the INTERFACE LOAD SELECTOR to position 8.

46. Press the TEST START pushbutton. The pushbutton shall light.

47. Set the CROSSBAR CONTROL to 93 and the VOLTMETER INPUT DVM switch to SIG 2 and measure the voltage on the DVM. Record the indication.

48. Press the TEST STOP pushbutton. The TEST START pushbutton shall go out.

49. Calculate the CGC +14VDC voltage change.

IMPORTANT

INTERVAL

TOOLS AND MATERIAL

1. Insure that the following lamps on the Test Control panel are lighted:
   a. ISS STANDBY
   b. CGC/LGC POWER ON
   c. 400 CPS POWER ON
2. If the STBY lamp on the DSKY is not lighted, proceed to step 4. If the STBY lamp is lighted, perform step 3.
3. Press and hold the STBY pushbutton until the STBY lamp goes out. Perform the following DSKY operations:
   a. Press RSET
   b. VERB 61 ENTR
4. Enter VERB 36 and press the ENTR pushbutton on the NAV DSKY.

CTS SWITCH INITIALIZATION

5. Set the VOLTAGE SELECT switch on the Power Control panel to RDC. Set the RDC panel switches as follows:
   a. DE MARGINS to NORM
   b. CH V METERS to DCVM
   c. CHANNEL to 601
   d. Check to see that no LOAD pushbuttons are lighted. If any are, push the pushbuttons to turn them off.
6. Perform the following DSKY operations:
   a. VERB 57 ENTR
   b. 00011 ENTR
7. Observe that the DSKY displays the following:
   a. Row 1 displays XX377
   b. Row 3 displays 00005

VERIFICATION WITH SIDL REQUIRED BEFORE USE

SUBSYSTEM G & N SYSTEM
ASSY

RCS JET ON-OFF TEST

8. Set CHANNEL V switches to the positions specified below and record the DCVM indication for each position:

	CHANNEL V	RCS JET
a.	601	+X+P
b.	602	-X-P
c.	603	-X+P
d.	604	+X-P
e.	605	+X+Y
f.	606	-X-Y
g.	607	-X+Y
h.	608	+X-Y

9. Press the ENTR pushbutton on the DSKY. Observe that the DSKY displays the following:
   a. Row 1 displays XX377
   b. Row 3 displays 00006
10. Set CHANNEL V switches to the positions specified in step 8 and record the DCVM indication for each position.
11. Set CHANNEL V switches to positions specified below and record the DCVM indication for each position:

	CHANNEL V	RCS JET
a.	609	+Z+R
b.	610	-Z-R
c.	611	-Z+R
d.	612	+Z-R
e.	613	+Y+R
f.	614	-Y-R
g.	615	-Y+R
h.	616	+Y-R

12. Press the ENTR pushbutton on the DSKY. Observe that the DSKY displays the following:
   a. Row 1 displays 1XXXX
   b. Row 3 displays 00011
13. Set CHANNEL V switches to the positions specified in step 11 and record the DCVM indications for each position.

ENG ON-OFF TEST

14. Set CHANNEL V switch to 506 (ENG ON). Record the DCVM indication.
15. Press the ENTR pushbutton on the DSKY. Observe that the DSKY displays the following:
   a. Row 1 displays 30000
   b. Row 3 displays 00012
16. Set CHANNEL V switch to 506. Record the DCVM indication.
17. Record the lamp indications on the Monitor panel for each of the following positions:
   a. SIV B INJ SEQ START
   b. SIV B CUT OFF
18. Press the ENTR pushbutton on the DSKY.
19. Record the lamp indications specified in step 17.
20. Record the following DSKY operations:
   a. VERB 21 NOUN 01 ENTR
   b. 01000 ENTR
   c. 77777 ENTR
   d. NOUN 15 ENTR
   e. 77777 ENTR ENTR

DATE 30 JUN 66

JOB CGC OUTPUT TEST
JDC 12209 REV A PAGE 3 OF 3

SUBSYSTEM G & N SYSTEM
ASSY

21. Repeat the following DSKY operations until Row 3 indicates 01060.
   a. 77777 ENTR ENTR
22. Perform the following DSKY operations:
   a. VERB 21 NOUN 01 ENTR
   b. 00413 ENTR
   c. 01000 ENTR
23. Press the DL ENABLE and WORD RATE 50 PPS pushbuttons.
24. Set switches as follows:
   XY Interface panel
      a. CHANNEL T to 102 (DLNK DATA)
      b. SCOPE to T
   Oscilloscope panel
      c. A to NORMAL DC
      d. B to INVERTED DC
      e. MODE to A + B

Insure the VOLT/DIV switches on Channel A and B are set to the same position. Measure and record the oscilloscope indication.

25. Set the SCOPE switch to S→T and CHANNEL S Switch to 307 (DLNK SYNC). Measure and record the delay of one of the DLNK DATA pulses with respect to the corresponding DLNK SYNC pulse.
26. Press the WORD RATE 10 PPS and the WORD RATE 50 PPS pushbuttons, adjust the scope and repeat step 25.
27. Press the WORD RATE 300 PPS and the WORD RATE 10 PPS pushbuttons. When the KEY REL light flashes, press the KEY REL pushbutton on the DSKY. VERB 05 and NOUN 31 shall be displayed on the DSKYs and Row 1 shall indicate 01105. The PROG lamp on the DSKYs shall be lighted.
28. Perform the following DSKY operations:
   a. VERB 11 NOUN 10 ENTR
   b. 00033 ENTR

Row 1 shall indicate X2XXX.

29. Press the DL ENABLE and WORD RATE 300 PPS pushbuttons and set the CHANNEL S and T switches to 101.

IMPORTANT

INTERVAL

TOOLS AND MATERIAL

1. Insure that the following lamps on the Test Control panel are lighted:

a. ISS STANDBY

b. CGC/ LGC POWER ON

c. 400 CPS POWER ON

2. If the STBY lamp on the DSKY is not lighted, proceed to step 4. If the STBY lamp is lighted, perform step 3.

3. Press and hold the STBY pushbutton until the STBY lamp goes out. Perform the following DSKY operations:

a. Press RSET

b. VERB 61 ENTR

4. Enter VERB 36 and press the ENTR pushbutton on the NAV DSKY.

CTS SWITCH INITIALIZATION

5. Set the VOLTAGE SELECT switch on the Power Control panel to RDC. Set the RDC panel switches as follows:

a. DE MARGINS to NORM

b. CH V METERS to DCVM

c. CHANNEL to 601

d. Check to see that no LOAD pushbuttons are lighted. If any are, push the pushbutton to turn them off.

6. Perform the following DSKY operations:

a. VERB 57 ENTR

b. 00011 ENTR

7. Observe that the DSKY displays the following:

a. Row 1 displays XX377

b. Row 3 displays 00005

VERIFICATION WITH SIDL REQUIRED BEFORE USE

DATE 30 JUN 66

JOB CGC OUTPUT TEST

SUBSYSTEM G & N SYSTEM

ASSY

RCS JET ON-OFF TEST

8. Set CHANNEL V switches to the positions specified below and record the DCVM indication for each position:

	CHANNEL V	RCS JET
a.	601	+X+P
b.	602	-X-P
c.	603	-X+P
d.	604	+X-P
e.	605	+X+Y
f.	606	-X-Y
g.	607	-X+Y
h.	608	+X-Y

9. Press the ENTR pushbutton on the DSKY. Observe that the DSKY displays the following:

a. Row I displays XX377

b. Row 3 displays 00006

10. Set CHANNEL V switches to the positions specified in step 8 and record the DCVM indication for each position.

11. Set CHANNEL V switches to positions specified below and record the DCVM indication for each position:

	CHANNEL V	RCS JET
a.	609	+Z+R
b.	610	-Z-R
c.	611	-Z+R
d.	612	+Z-R
e.	613	+Y+R
f.	614	-Y-R
g.	615	-Y+R
h.	616	+Y-R

12. Press the ENTR pushbutton on the DSKY. Observe that the DSKY displays the following:

a. Row 1 displays 1XXXX

b. Row 3 displays 00011

13. Set CHANNEL V switches to the positions specified in step 11 and record the DCVM indications for each position.

ENG ON-OFF TEST

14. Set CHANNEL V switch to 506 (ENG ON). Record the DCVM indication.

15. Press the ENTR pushbutton on the DSKY. Observe that the DSKY displays the following:

a. Row 1 displays 30000

b. Row 3 displays 00012

16. Set CHANNEL V switch to 506. Record the DCVM indication.

17. Record the lamp indications on the Monitor panel for each of the following positions:

a. SIV B INJ SEQ START

b. SIV B CUT OFF

18. Press the ENTR pushbutton on the DSKY.

19. Record the lamp indications specified in step 17.

20. Perform the following DSKY operations:

a. VERB 21 NOUN 01 ENTR

b. 01000 ENTR

c. 77777 ENTR

d. NOUN 15 ENTR

e. 77777 ENTR ENTR

DATE 30 JUN 66

JOB CGC OUTPUT TEST

21. Repeat the following DSKY operations until Row 3 indicates 01060.

a. 77777 ENTR ENTR

22. Perform the following DSKY operations:

a. VERB 21 NOUN 01 ENTR

b. 00413 ENTR

c. 01000 ENTR

23. Press the DL ENABLE and WORD RATE 50 PPS pushbuttons.

24. Set switches as follows:

XY Interface panel

a. CHANNEL T to 102 (DLNK DATA)

b. SCOPE to T

Oscilloscope panel

c. A to NORMAL DC

d. B to INVERTED DC

e. MODE to A + B

Insure the VOLT/DIV switches on Channel A and B are set to the same position. Measure and record the oscilloscope indication.

25. Set the SCOPE switch to S→T and CHANNEL S Switch to 307 (DLNK SYNC). Measure and record the delay of one of the DLNK DATA pulses with respect to the corresponding DLNK SYNC pulse.

26. Press the WORD RATE 10 PPS and the WORD RATE 50 PPS pushbuttons, adjust the scope and repeat step 25.

27. Press the WORD RATE 300 PPS and the WORD RATE 10 PPS pushbuttons. When the KEY REL light flashes, press the KEY REL pushbutton on the DSKY. VERB 05 and NOUN 31 shall be displayed on the DSKYs and Row 1 shall indicate 01105. The PROG lamp on the DSKYs shall be lighted.

28. Perform the following DSKY operations:

a. VERB 11 NOUN 10 ENTR

b. 00033 ENTR

Row 1 shall indicate X2XXX.

29. Press the DL ENABLE and WORD RATE 300 PPS pushbuttons and set the CHANNEL S and T switches to 101.

   a. Row 1 displays 1XXXX
   b. Row 3 displays 00011
13. Set CHANNEL V switches to the positions specified in step 11 and record the DCVM indications for each position.

ENG ON-OFF TEST

14. Set CHANNEL V switches to 506 (ENG ON). Record the DCVM indication.
15. Press the ENTR pushbutton on the DSKY. Observe that the DSKY displays the following:
   a. Row 1 displays 30000
   b. Row 3 displays 00012
16. Set CHANNEL V switches to 506. Record the DCVM indication.

NOTE: Indications of step 17 and step 19 occur only with MAIN DSKY installed or with cable W-160 (P3) connected to the DSKY.

17. Record that following Monitor panel indicators are lighted:
   a. SIV B INJ SEQ START
   b. SIV B CUT OFF
18. Press the ENTR pushbutton on the DSKY.
19. Record that following Monitor panel indicators are not lighted:
   a. SIV B INJ SEQ START
   b. SIV B CUT OFF

DATE 30 JUN 66

JOB CGC OUTPUT TEST	**JDC** 12209 **REV** D **PAGE** 3 **OF** 3
SUBSYSTEM G & N SYSTEM	**ASSY**

20. Perform the following DSKY operations:
   a. VERB 21 NOUN 01 ENTR
   b. 01000 ENTR
   c. 77777 ENTR
   d. NOUN 15 ENTR
   e. 77777 ENTR ENTR
21. Repeat the following DSKY operations until Row 3 indicates 01060.
   a. 77777 ENTR ENTR
22. Perform the following DSKY operations:
   a. VERB 21 NOUN 01 ENTR
   b. 00413 ENTR
   c. 01000 ENTR
23. Press the DL ENABLE and WORD RATE 50 PPS pushbuttons on XY Interface panel.
24. Set switches as follows:
   XY Interface panel
   a. CHANNEL T to 102 (DLNK DATA)
   b. SCOPE to T
   Oscilloscope panel
   c. A to NORMAL DC
   d. B to INVERTED DC
   e. MODE to A + B

Insure the VOLT/DIV switches on Channel A and B are set to the same position. Measure and record the oscilloscope indication.

25. Set the SCOPE switch to S→T and CHANNEL S Switch to 307 (DLNK SYNC). Measure and record the delay of one of the DLNK DATA pulses with respect to the corresponding DLNK SYNC pulse.
26. Press the WORD RATE 10 PPS and the WORD RATE 50 PPS pushbuttons, adjust the scope and repeat step 25.
27. Press the WORD RATE 300 PPS and the WORD RATE 10 PPS pushbuttons. When the KEY REL light flashes, press the KEY REL pushbutton on the DSKY.

VERB 05 and NOUN 31 shall be displayed on the DSKY and Row 1 shall indicate 01105. The PROG lamp on the DSKY shall be lighted.

28. Perform the following DSKY operations:
   a. VERB 11 NOUN 10 ENTR
   b. 00033 ENTR

Row 1 shall indicate X2XXX.

29. Press the DL ENABLE and WORD RATE 300 PPS pushbuttons and set the CHANNEL S and T switches to 101.

INTERVAL

TOOLS AND MATERIAL

1. Insure that the following lamps on the Test Control panel are lighted:
   - a. ISS STANDBY
   - b. CGC/ LGC POWER ON
   - c. 400 CPS POWER ON

2. If the STBY lamp on the DSKY is not lighted, proceed to step 4. If the STBY lamp is lighted, perform step 3.

3. Press and hold the STBY pushbutton until the STBY lamp goes out. Perform the following DSKY operations:

a.	Press	RSET
b.	VERB 61	ENTR

4. Enter VERB 36 and press the ENTR pushbutton on the DSKY.

CTS SWITCH INITIALIZATION

5. Set the VOLTAGE SELECT switch on the Power Control panel to CTS RDC. Set the RDC Interface panel switches as follows:
   - a. DE MARGINS to NORM
   - b. CH V METERS to DCVM
   - c. CHANNEL V to 601
   - d. Check to see that no LOAD pushbuttons are lighted. If any are, push the pushbutton to turn them off.

6. Perform the following DSKY operations:

a.	VERB 57	ENTR
b.	00011	ENTR

7. Observe that the DSKY displays the following:
   - a. Row 1 displays XX377
   - b. Row 3 displays 00005

VERIFICATION WITH SIDL REQUIRED BEFORE USE

RCS JET ON-OFF TEST

8. Set CHANNEL V switches to the positions specified below and record the DCVM indication for each position:

	CHANNEL V	RCS JET
a.	601	+X+P
b.	602	-X-P
c.	603	-X+P
d.	604	+X-P
e.	605	+X+Y
f.	606	-X-Y
g.	607	-X+Y
h.	608	+X-Y

9. Press the ENTR pushbutton on the DSKY. Observe that the DSKY displays the following:
   - a. Row 1 displays XX377
   - b. Row 3 displays 00006

10. Set CHANNEL V switches to the positions specified in step 8 and record the DCVM indication for each position.

11. Set CHANNEL V switches to positions specified below and record the DCVM indication for each position:

	CHANNEL V	RCS JET
a.	609	+Z+R
b.	610	-Z-R
c.	611	-Z+R
d.	612	+Z-R
e.	613	+Y+R
f.	614	-Y-R
g.	615	-Y+R
h.	616	+Y-R

12. Press the ENTR pushbutton on the DSKY. Observe that the DSKY displays the following:
   - a. Row 1 displays 1XXXX
   - b. Row 3 displays 00011

13. Set CHANNEL V switches to the positions specified in step 11 and record the DCVM indications for each position.

ENG ON-OFF TEST

14. Set CHANNEL V switches to 506 (ENG ON). Record the DCVM indication.

15. Press the ENTR pushbutton on the DSKY. Observe that the DSKY displays the following:
   - a. Row 1 displays 30000
   - b. Row 3 displays 00012

16. Set CHANNEL V switches to 506. Record the DCVM indication.

NOTE: Indications of step 17 and step 19 occur only with MAIN DSKY installed or with cable W-160 (P3) connected to the DSKY.

17. Record that following Monitor panel indicators are lighted:
   - a. SIV B INJ SEQ START
   - b. SIV B CUT OFF

18. Press the ENTR pushbutton on the DSKY.

19. Record that following Monitor panel indicators are not lighted:
   - a. SIV B INJ SEQ START
   - b. SIV B CUT OFF

REFERENCES PS-2015000

IMPORTANT Insure that connector assembly (2003099) is removed and W226-P1 is connected to CGC test connector before proceeding with this JDC.

INTERVAL

TOOLS AND MATERIAL

1. Insure that the following lamps on the Test Control panel are lighted:
   - a. ISS STANDBY
   - b. CGC/LGC POWER ON
   - c. 400 CPS POWER ON

2. If the STBY lamp on the DSKY is not lighted, proceed to step 4. If the STBY lamp is lighted, perform step 3.

3. Press and hold the STBY pushbutton until the STBY lamp goes out. Perform the following DSKY operations:

a. Press		RSET
b. VERB 61		ENTR

4. Enter VERB 36 and press the ENTR pushbutton on the DSKY.

CTS SWITCH INITIALIZATION

5. Set the VOLTAGE SELECT switch on the Power Control panel to CTS RDC. Set the RDC Interface panel switches as follows:
   - a. DE MARGINS to NORM
   - b. CH V METERS to DCVM
   - c. CHANNEL V to 601
   - d. Check to see that no LOAD pushbuttons are lighted. If any are, push the pushbutton to turn them off.

6. Perform the following DSKY operations:

a. VERB 57	ENTR
b. 00011	ENTR

7. Observe that the DSKY displays the following:
   - a. Row 1 displays XX377
   - b. Row 3 displays 00005

VERIFICATION WITH SIDL REQUIRED BEFORE USE

DATE 30 JUN 66

JOB CGC OUTPUT TEST | JDC 12209 REV G PAGE 2 OF 3

SUBSYSTEM G & N SYSTEM | ASSY

RCS JET ON-OFF TEST

8. Set CHANNEL V switches to the positions specified below and record the DCVM indication for each position:

	CHANNEL V	RCS JET
a.	601	+X+P
b.	602	-X-P
c.	603	-X+P
d.	604	+X-P
e.	605	+X+Y
f.	606	-X-Y
g.	607	-X+Y
h.	608	+X-Y

9. Press the ENTR pushbutton on the DSKY. Observe that the DSKY displays the following:
   - a. Row 1 displays XX377
   - b. Row 3 displays 00006

10. Set CHANNEL V switches to the positions specified in step 8 and record the DCVM indication for each position.

11. Set CHANNEL V switches to positions specified below and record the DCVM indication for each position:

	CHANNEL V	RCS JET
a.	609	+Z+R
b.	610	-Z-R
c.	611	-Z+R
d.	612	+Z-R
e.	613	+Y+R
f.	614	-Y-R
g.	615	-Y+R
h.	616	+Y-R

12. Press the ENTR pushbutton on the DSKY. Observe that the DSKY displays the following:
   - a. Row 1 displays 1XXXX
   - b. Row 3 displays 00011

13. Set CHANNEL V switches to the positions specified in step 11 and record the DCVM indications for each position.

ENG ON-OFF TEST

14. Set CHANNEL V switches to 506 (ENG ON). Record the DCVM indication.

15. Press the ENTR pushbutton on the DSKY. Observe that the DSKY displays the following:
   - a. Row 1 displays 30000
   - b. Row 3 displays 00012

16. Set CHANNEL V switches to 506. Record the DCVM indication.

NOTE: Indications of step 17 and step 19 occur only with MAIN DSKY installed or with cable W-160 (P3) connected to the DSKY.

17. Record that following Monitor panel indicators are lighted:
   - a. SIV B INJ SEQ START
   - b. SIV B CUT OFF

18. Press the ENTR pushbutton on the DSKY.

19. Record that following Monitor panel indicators are not lighted:
   - a. SIV B INJ SEQ START
   - b. SIV B CUT OFF

DATE 30 JUN 66

JOB CGC OUTPUT TEST | JDC 12209 REV G PAGE 3 OF 3

SUBSYSTEM G & N SYSTEM | ASSY

20. Perform the following DSKY operations:

a. VERB 21	NOUN 01	ENTR
b. 01000		ENTR
c. 77777		ENTR
d. NOUN 15		ENTR
e. 77777		ENTR ENTR

21. Repeat the following DSKY operations until Row 3 indicates 01060.

a. 77777	ENTR ENTR

22. Perform the following DSKY operations:

a. VERB 21	NOUN 01	ENTR
b. 00413		ENTR
c. 01000		ENTR

23. Press the DL ENABLE and WORD RATE 50 PPS pushbuttons on XY Interface panel.

24. Set switches as follows:

XY Interface panel
   - a. CHANNEL T to 102 (DLNK DATA)
   - b. SCOPE to T

Oscilloscope panel
   - c. A to NORMAL DC
   - d. B to INVERTED DC
   - e. MODE to A + B

Insure the VOLT/DIV switches on Channel A and B are set to the same position.

Measure and record the oscilloscope indication. (See figure 1.)

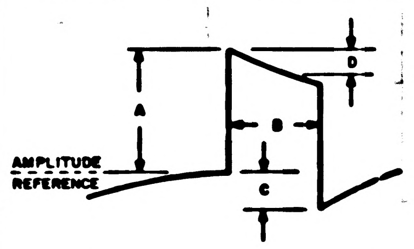

Figure 1. Pulse Diagram

25. Set the SCOPE switch to S→T and CHANNEL S Switch to 307 (DLNK SYNC). Measure and record the delay of one of the DLNK DATA pulses with respect to the corresponding DLNK SYNC pulse.

26. Press the WORD RATE 10 PPS and the WORD RATE 50 PPS pushbuttons, adjust the scope and repeat step 25.

27. Press the WORD RATE 300 PPS and the WORD RATE 10 PPS pushbuttons. When the KEY REL light flashes, press the KEY REL pushbutton on the DSKY. VERB 05 and NOUN 31 shall be displayed on the DSKY and Row 1 shall indicate 01105. The PROG lamp on the DSKY shall be lighted.

28. Perform the following DSKY operations:

a. VERB 11	NOUN 10	ENTR
b. 00033	ENTR	

Row 1 shall indicate X2XXX.

29. Press the DL ENABLE and WORD RATE 300 PPS pushbuttons and set the CHANNEL S and T switches to 101.

RCS JET ON-OFF TEST

8. Set CHANNEL V switches to the positions specified below and record the DCVM indication for each position:

CHANNEL V	RCS JET
a. 601	+X+P
b. 602	-X-P
c. 603	-X+P
d. 604	+X-P
e. 605	+X+Y
f. 606	-X-Y
g. 607	-X+Y
h. 608	+X-Y

9. Press the ENTR pushbutton on the DSKY. Observe that the DSKY displays the following:
   a. Row 1 displays XX377
   b. Row 3 displays 00006

10. Set CHANNEL V switches to the positions specified in step 8 and record the DCVM indication for each position.

11. Set CHANNEL V switches to positions specified below and record the DCVM indication for each position:

CHANNEL V	RCS JET
a. 609	+Z+R
b. 610	-Z-R
c. 611	-Z+R
d. 612	+Z-R
e. 613	+Y+R
f. 614	-Y-R
g. 615	-Y+R
h. 616	+Y-R

12. Press the ENTR pushbutton on the DSKY. Observe that the DSKY displays the following:
   a. Row 1 displays 1XXXX
   b. Row 3 displays 00011

13. Set CHANNEL V switches to the positions specified in step 11 and record the DCVM indications for each position.

ENG ON-OFF TEST

14. Set CHANNEL V switches to 506 (ENG ON). Record the DCVM indication.

15. Press the ENTR pushbutton on the DSKY. Observe that the DSKY displays the following:
   a. Row 1 displays 30000
   b. Row 3 displays 00012

16. Set CHANNEL V switches to 506. Record the DCVM indication.

NOTE: Indications of step 17 and step 19 occur only with MAIN DSKY installed or with cable W-160 (P3) connected to the DSKY.

17. Record that following Monitor panel indicators are lighted:
   a. SIV B INJ SEQ START
   b. SIV B CUT OFF

18. Press the ENTR pushbutton on the DSKY.

19. Record that following Monitor panel indicators are not lighted:
   a. SIV B INJ SEQ START
   b. SIV B CUT OFF

DATE 30 JUN 66

JOB CGC OUTPUT TEST | JDC 12209 REV H PAGE 3 OF 4

SUBSYSTEM G & N SYSTEM | ASSY

20. Perform the following DSKY operations:

a. VERB 21	NOUN 01	ENTR
b. 01000		ENTR
c. 77777		ENTR
d. NOUN 15		ENTR
e. 77777		ENTR ENTR

21. Repeat the following DSKY operations until Row 3 indicates 01060.

a. 77777	ENTR ENTR

22. Perform the following DSKY operations:

a. VERB 21	NOUN 01	ENTR
b. 00413		ENTR
c. 01000		ENTR

23. Press the DL ENABLE and WORD RATE 50 PPS pushbuttons on XY Interface panel.

24. Set switches as follows:

XY Interface panel
   a. CHANNEL T to 102 (DLNK DATA)
   b. SCOPE to T

Oscilloscope panel
   c. A to NORMAL DC
   d. B to INVERTED DC
   e. MODE to A + B

Insure the VOLT/DIV switches on Channel A and B are set to the same position. Measure and record oscilloscope indications A through F (see figure 1) as follows:
   a. Amplitude as shown on figure
   b. Pulse width at 50% of amplitude
   c. Rise time from 10% to 90% of amplitude
   d. Backswing as shown on figure
   e. Droop measured at 2 microseconds
   f. Noise measured during pulse absence and measured with respect to amplitude reference.

25. Set the SCOPE switch to S→T and CHANNEL S Switch to 307 (DLNK SYNC). Measure and record the delay of one of the DLNK DATA pulses with respect to the corresponding DLNK SYNC pulse.

26. Press the WORD RATE 10 PPS and the WORD RATE 50 PPS pushbuttons, adjust the scope and repeat step 25.

27. Press the WORD RATE 300 PPS and the WORD RATE 10 PPS pushbuttons. When the KEY REL light flashes, press the KEY REL pushbutton on the DSKY. VERB 05 and NOUN 31 shall be displayed on the DSKY and Row 1 shall indicate 01105. The PROG lamp on the DSKY shall be lighted.

28. Perform the following DSKY operations:

a. VERB 11	NOUN 10	ENTR
b. 00033	ENTR	

Row 1 shall indicate X2XXX.

29. Press the DL ENABLE and WORD RATE 300 PPS pushbuttons and set the CHANNEL S and T switches to 101.

REFERENCES PS-2015000

IMPORTANT Insure that connector assembly (2003099) is removed and W226-P1 is connected to CGC test connector before proceeding with this JDC.

INTERVAL

TOOLS AND MATERIAL

1. Insure that the following lamps on the Test Control panel are lighted:

a. ISS STANDBY

b. CGC/ LGC POWER ON

c. 400 CPS POWER ON

2. If the STBY lamp on the DSKY is not lighted, proceed to step 4. If the STBY lamp is lighted, perform step 3.

3. Press and hold the STBY pushbutton until the STBY lamp goes out. Perform the following DSKY operations:

a.	Press	RSET
b.	VERB 61	ENTR

4. Enter VERB 36 and press the ENTR pushbutton on the DSKY.

CTS SWITCH INITIALIZATION

5. Set the VOLTAGE SELECT switch on the Power Control panel to CTS RDC. Set the RDC Interface panel switches as follows:

a. DE MARGINS to NORM

b. CHAN V METERS to DCVM

c. CHANNEL V to 601

d. Check to see that no LOAD pushbuttons are lighted. If any are, push the pushbutton to turn them off.

6. Perform the following DSKY operations:

a.	VERB 57	ENTR
b.	00011	ENTR

7. Observe that the DSKY displays the following:

a. Row 1 displays XX377

b. Row 3 displays 00005

VERIFICATION WITH SIDL REQUIRED BEFORE USE

SUBSYSTEM G & N SYSTEM

ASSY

RCS JET ON-OFF TEST

8. Set CHANNEL V switches to the positions specified below and record the DCVM indication for each position:

	CHANNEL V	RCS JET
a.	601	+X+P
b.	602	-X-P
c.	603	-X+P
d.	604	+X-P
e.	605	+X+Y
f.	606	-X-Y
g.	607	-X+Y
h.	608	+X-Y

9. Press the ENTR pushbutton on the DSKY. Observe that the DSKY displays the following:

a. Row 1 displays XX377

b. Row 3 displays 00006

10. Set CHANNEL V switches to the positions specified in step 8 and record the DCVM indication for each position.

11. Set CHANNEL V switches to positions specified below and record the DCVM indication for each position:

	CHANNEL V	RCS JET
a.	609	+Z+R
b.	610	-Z-R
c.	611	-Z+R
d.	612	+Z-R
e.	613	+Y+R
f.	614	-Y-R
g.	615	-Y+R
h.	616	+Y-R

12. Press the ENTR pushbutton on the DSKY. Observe that the DSKY displays the following:

a. Row 1 displays 1XXXX

b. Row 3 displays 00011

13. Set CHANNEL V switches to the positions specified in step 11 and record the DCVM indications for each position.

ENG ON-OFF TEST

14. Set CHANNEL V switches to 506 (ENG ON). Record the DCVM indication.

15. Press the ENTR pushbutton on the DSKY. Observe that the DSKY displays the following:

a. Row 1 displays 30000

b. Row 3 displays 00012

16. Set CHANNEL V switches to 506. Record the DCVM indication.

NOTE: Indications of step 17 and step 19 occur only with MAIN DSKY installed or with cable W-160 (P3) connected to the DSKY.

17. Record that following Monitor panel indicators are lighted:

a. SIVB INJ SEQ START

b. SIVB CUT OFF

18. Press the ENTR pushbutton on the DSKY.

19. Record that following Monitor panel indicators are not lighted:

a. SIVB INJ SEQ START

b. SIVB CUT OFF

DATE 30 JUN 66

JOB CGC OUTPUT TEST

JDC 12209 **REV** J **PAGE** 3 **OF** 4

SUBSYSTEM G & N SYSTEM

ASSY

20. Perform the following DSKY operations:

a.	VERB 21	NOUN 01	ENTR
b.	01000		ENTR
c.	77777		ENTR
d.	NOUN 15		ENTR
e.	77777		ENTR ENTR

21. Repeat the following DSKY operations until Row 3 indicates 01060.

a.	77777	ENTR ENTR

22. Perform the following DSKY operations:

a.	VERB 21	NOUN 01	ENTR
b.	00413		ENTR
c.	01000		ENTR

23. Press to light DL ENABLE and WORD RATE 50 PPS pushbuttons on XY Interface panel.

24. Set switches as follows:

XY Interface panel

a. CHANNEL T to 102 (DLNK DATA)

b. SCOPE to T

Oscilloscope panel

c. A to NORM DC

d. B to INVERT DC

e. MODE to A + B

Insure the VOLTS/DIV switches on Channel A and B are set to the same position. Measure and record oscilloscope indications A through F (see figure 1) as follows:

a. Amplitude as shown on figure

b. Pulse width at 50% of amplitude

c. Rise time from 10% to 90% of amplitude

d. Backswing as shown on figure

e. Droop measured at 2 microseconds

f. Noise measured during pulse absence and measured with respect to amplitude reference.

25. Set the SCOPE switch to S ⟶ T and CHANNEL S Switch to 307 (DLNK SYNC). Measure and record the delay of one of the DLNK DATA pulses with respect to the corresponding DLNK SYNC pulse.

26. Press to light WORD RATE 10 PPS pushbutton and press to extinguish WORD RATE 50 PPS pushbutton. Adjust oscilloscope and repeat step 25.

27. Press to light WORD RATE 300 PPS pushbutton and press to extinguish WORD RATE 10 PPS pushbutton. When KEY REL indicator on DSKY flashes, press KEY REL pushbutton. Observe DSKY displays VERB 05 and NOUN 31, Row 1 indicates 01105, and PROG indicator is lighted.

28. Perform the following DSKY operations:

a.	VERB 11	NOUN 10	ENTR
b.	00033	ENTR	

Row 1 shall indicate X2XXX.

29. Press to extinguish DL ENABLE and WORD RATE 300 PPS pushbuttons and set CHANNEL S and CHANNEL T switches to 101.

30. Perform the following DSKY operation:

VERB 36	ENTR

NOTE: If the VERB display on the DSKY contains a number from 11 to 17, the KEY REL indicator may flash when DSKY entries are made.

1. Insure that the following lamps on the Test Control panel are lighted:

a. ISS STANDBY

b. CGC/LGC POWER ON

c. 400 CPS POWER ON

d. Zero DCVM meter on CTS Power Control panel and then set RANGE SELECT switch to 40V.

e. Verify that AGC ALARMS #6 on Logic Drawer No. 1 is lighted.

2. If the STBY lamp on the DSKY is lighted, press and hold PRO (or STBY) pushbutton until lamp goes out. If lamp does not go out within 5 seconds, release and press pushbutton again. If PRO (or STBY) pushbutton is pressed more than once, record in the System log the number of times pressed.

3. Perform following DSKY operations:

a. Press ENTR

b. VERB 61 ENTR

4. Enter VERB 36 and press the ENTR pushbutton on the DSKY.

CTS SWITCH INITIALIZATION

5. Set the VOLTAGE SELECT switch on the Power Control panel to CTS RDC. Set the RDC Interface panel switches as follows:

a. DE MARGINS to NORM

VERIFICATION WITH SIDL REQUIRED BEFORE USE

---

b. CHAN V METERS to DCVM

c. CHANNEL V to 601

d. Check to see that no LOAD pushbuttons are lighted. If any are, push the pushbutton to turn them off.

6. Perform the following DSKY operations:

a. VERB 57 ENTR

b. 00011 ENTR

7. Observe that the DSKY displays the following:

a. Row 1 displays XX377

b. Row 3 displays 00005

RCS JET ON-OFF TEST

8. Set CHANNEL V switches to the positions specified below and record the DCVM indication for each position:

	CHANNEL V	RCS JET
a.	601	+X-P
b.	602	-X-P
c.	603	-X+P
d.	604	+X-P
e.	605	+X+Y
f.	606	-X-Y
g.	607	-X+Y
h.	608	+X-Y

9. Press the ENTR pushbutton on the DSKY. Observe that the DSKY displays the following:

a. Row 1 displays XX377

b. Row 3 displays 00006

10. Set CHANNEL V switches to the positions specified in step 8 and record the DCVM indication for each position.

11. Set CHANNEL V switches to positions specified below and record the DCVM indication for each position:

	CHANNEL V	RCS JET
a.	609	+Z+R
b.	610	-Z-R
c.	611	-Z+R
d.	612	+Z-R
e.	613	+Y+R
f.	614	-Y-R
g.	615	-Y+R
h.	616	+Y-R

12. Press the ENTR pushbutton on the DSKY. Observe that the DSKY displays the following:

a. Row 1 displays 1XXXX

b. Row 3 displays 00011

13. Set CHANNEL V switches to the positions specified in step 11 and record the DCVM indications for each position.

ENG ON-OFF TEST

14. Set CHANNEL V switches to 506 (ENG ON). Record the DCVM indication.

15. Press the ENTR pushbutton on the DSKY. Observe that the DSKY displays the following:

a. Row 1 displays 30000

b. Row 3 displays 00012

16. Set CHANNEL V switches to 506. Record the DCVM indication.

NOTE: Indications of step 17 and step 19 occur only with MAIN DSKY installed or with cable W-160 (P3) connected to the DSKY.

17. Record that following Monitor panel indicators are lighted:

a. SIVB INJ SEQ START

b. SIVB CUT OFF

18. Press the ENTR pushbutton on the DSKY.

19. Record that following Monitor panel indicators are not lighted:

a. SIVB INJ SEQ START

b. SIVB CUT OFF

20. Perform the following DSKY operations:

a. VERB 21 NOUN 01 ENTR

b. 01000 ENTR

c. 77777 ENTR

d. NOUN 15 ENTR

e. 77777 ENTR ENTR

21. Repeat the following DSKY operations until Row 3 indicates 01060.

a. 77777 ENTR ENTR

22. Perform the following DSKY operations:

a. VERB 21 NOUN 01 ENTR

b. 00413 ENTR

c. 01000 ENTR

23. Press to light DL ENABLE and WORD RATE 50 PPS pushbuttons on XY Interface panel.

24. Set switches as follows:

XY Interface panel

a. CHANNEL T to 102 (DLNK DATA)

b. SCOPE to T

Oscilloscope panel

c. A to NORM DC

d. B to INVERT DC

e. MODE to A + B

Insure the VOLTS/DIV switches on Channel A and B are set to the same position. Measure and record oscilloscope indications A through F (see figure 1) as follows:

a. Amplitude as shown on figure

b. Pulse width at 50% of amplitude

c. Rise time from 10% to 90% of amplitude

d. Backswing as shown on figure

e. Droop measured at 2 microseconds

f. Noise measured during pulse absence and measured with respect to amplitude reference.

25. Set the SCOPE switch to S —T and CHANNEL S Switch to 307 (DLNK SYNC). Measure and record the delay of one of the DLNK DATA pulses with respect to the corresponding DLNK SYNC pulse.

26. Press to light WORD RATE 10 PPS pushbutton and press to extinguish WORD RATE 50 PPS pushbutton. Adjust oscilloscope and repeat step 25.

27. Press to light WORD RATE 300 PPS pushbutton and press to extinguish WORD RATE 10 PPS pushbutton. When KEY REL indicator on DSKY flashes, press KEY REL

---

pushbutton. Observe DSKY displays VERB 05 and NOUN 31, Row 1 indicates 01105, and PROG indicator is lighted.

28. Perform the following DSKY operations:

a. VERB 11 NOUN 10 ENTR

b. 00033 ENTR

Row 1 shall indicate X2XXX.

29. Press to extinguish DL ENABLE and WORD RATE 300 PPS pushbuttons and set CHANNEL S and CHANNEL T switches to 101.

30. Perform the following DSKY operations:

TOOLS AND MATERIAL

NOTE: If the VERB display on the DSKY contains a number from 11 to 17, the KEY REL indicator may flash when DSKY entries are made.

NOTE: Insure that jumpers are connected from CLOCK connector on the CTS Interface Signals patch board to the CLOCK connector on the Frequency Counter and from the EXT SY-2 connector on the XY Interface panel to the Oscilloscope CLOCK connector on the patch board.

1. Insure that the following lamps on the Test Control panel are lighted:
   a. ISS STANDBY
   b. CGC/LGC POWER ON
   c. 400 CPS POWER ON
   d. Zero DCVM meter on CTS Power Control panel and then set RANGE SELECT switch to 40V.
2. If the STBY lamp on the DSKY is lighted, press and hold PRO (or STBY) pushbutton until lamp goes out. If lamp does not go out within 5 seconds, release and press pushbutton again. If PRO (or STBY) pushbutton is pressed more than once, record in the System log the number of times pressed.
3. Perform following DSKY operations:
   a. Deleted

b. VERB 61 ENTR

4. Enter VERB 36 and press the ENTR pushbutton on the DSKY. Press RSET pushbutton.

CTS SWITCH INITIALIZATION

5. Set the VOLTAGE SELECT switch on the Power Control panel to CTS RDC. Set the RDC Interface panel switches as follows:
   a. DE MARGINS to NORM
   b. CHAN V METERS to DCVM
   c. CHANNEL V to 601
   d. Check to see that no LOAD pushbuttons are lighted. If any are, push the pushbutton to turn them off.
6. Perform the following DSKY operations:
   a. VERB 57 ENTR
   b. 00011 ENTR
7. Observe that the DSKY displays the following:
   a. Row 1 displays XX377
   b. Row 3 displays 00005

RCS JET ON-OFF TEST

8. Set CHANNEL V switches to the positions specified below and record the DCVM indication for each position:

	CHANNEL V	RCS JET
a.	601	+X+P
b.	602	-X-P
c.	603	-X+P
d.	604	+X-P
e.	605	+X+Y
f.	606	-X-Y
g.	607	-X+Y
h.	608	+X-Y

9. Press the ENTR pushbutton on the DSKY. Observe that the DSKY displays the following:
   a. Row 1 displays XX377
   b. Row 3 displays 00006
10. Set CHANNEL V switches to the positions specified in step 8 and record the DCVM indication for each position.
11. Set CHANNEL V switches to positions specified below and record the DCVM indication for each position:

	CHANNEL V	RCS JET
a.	609	+Z+R
b.	610	-Z-R
c.	611	-Z+R
d.	612	+Z-R
e.	613	+Y+R
f.	614	-Y-R
g.	615	-Y+R
h.	616	+Y-R

12. Press the ENTR pushbutton on the DSKY. Observe that the DSKY displays the following:
   a. Row 1 displays 1XXXX
   b. Row 3 displays 00011
13. Set CHANNEL V switches to the positions specified in step 11 and record the DCVM indications for each position.

ENG ON-OFF TEST

14. Set CHANNEL V switches to 506 (ENG ON). Record the DCVM indication.

DATE 30 JUN 66

JOB CGC OUTPUT TEST | JDC 12209 REV L PAGE 3 OF 4

SUBSYSTEM G & N SYSTEM | ASSY

15. Press the ENTR pushbutton on the DSKY. Observe that the DSKY displays the following:
   a. Row 1 displays 30000
   b. Row 3 displays 00012
16. Set CHANNEL V switches to 506. Record the DCVM indication.

    NOTE: Indications of step 17 and step 19 occur only with MAIN DSKY installed or with cable W-160 (P3) connected to the DSKY.

17. Record that following Monitor panel indicators are lighted:
   a. SIVB INJ SEQ START
   b. SIVB CUT OFF
18. Press the ENTR pushbutton on the DSKY.
19. Record that following Monitor panel indicators are not lighted:
   a. SIVB INJ SEQ START
   b. SIVB CUT OFF
20. Perform the following DSKY operations:
   a. VERB 21 NOUN 01 ENTR
   b. 01000 ENTR
   c. 77777 ENTR
   d. NOUN 15 ENTR
   e. 77777 ENTR ENTR
21. Repeat the following DSKY operations until Row 3 indicates 01060.
   a. 77777 ENTR ENTR
22. Perform the following DSKY operations:
   a. VERB 21 NOUN 01 ENTR
   b. 00413 ENTR
   c. 01000 ENTR
23. Press to light DL ENABLE and WORD RATE 50 PPS pushbuttons on XY Interface panel.
24. Set switches as follows:

    XY Interface panel
   a. CHANNEL T to 102 (DLNK DATA)
   b. SCOPE to T

    Oscilloscope panel
   c. A to NORM DC
   d. B to INVERT DC
   e. MODE to A + B

Insure the VOLTS/DIV switches on Channel A and B are set to the same position. Measure and record oscilloscope indications A through F (see figure 1) as follows:
   a. Amplitude as shown on figure
   b. Pulse width at 50% of amplitude
   c. Rise time from 10% to 90% of amplitude
   d. Backswing as shown on figure
   e. Droop measured at 2 microseconds
   f. Noise measured during pulse absence and measured with respect to amplitude reference.

25. Set the SCOPE switch to S ⟶ T and CHANNEL S Switch to 307 (DLNK SYNC). Measure and record the delay of one of the DLNK DATA pulses with respect to the corresponding DLNK SYNC pulse.

DATE 30 JUN 66

TOOLS AND MATERIAL UPLINK Test Tape, P/N 2901676-001

IMPORTANT: Insure that cable W226 is removed and connector assembly (2003099) is connected to the CGC test connector before proceeding with this JDC.

NOTE: If the VERB display on DSKY contains a number from 11 through 17, the KEY REL indicator may flash when DSKY entries are made.

NOTE: Insure that jumpers are connected from CLOCK connector on the CTS Interface Signals patch board to the CLOCK connector on the Frequency Counter and from the EXT SY-2 connector on the XY Interface panel to the Oscilloscope CLOCK connector on the patch board.

1. Connect Self Test Assembly, 2014392, to Buffer Box Assembly by connecting P1 to J4, P2 to J5, P3 to J6, and P4 to J10. Press to light SELF TEST pushbutton on Self Test panel and set digiswitches on Self Test panel and Self Test Assembly to 00000.

1A. Insure that the ISS is in the Standby condition and that the CGC/LGC POWER ON and 400 CPS POWER ON indicators on Test Control panel are lighted.

2. Set DE MARGINS switch on RDC Interface panel to NORM.

3. Insure that following pushbuttons on RDC Interface panel are not lighted.

JOB CGC INPUT TEST

INITIAL TDRR 29882 DS PGS 1

SUBSYSTEM G & N SYSTEM

ASSY.

DESCRIPTION This test is designed to check all CM spacecraft inputs to the CGC. All spacecraft inputs to the inbits of CH 30, 31, 32, 33 and 16 and uplink data inputs are simulated at the spacecraft interface by the CTS. All results are verified by interrogation of the CGC channels and registers.

							TOOLS AND MATERIAL

1. Insure that the ISS is in the Standby condition and that the CGC and 115V 400 CPS pushbuttons are ON.

2. Set the DE MARGINS switch to NORM on the RDC panel of the CTS.

3. Insure that the following pushbuttons on the RDC panel are not lighted.

CH30-14/IN0-14 through CH30-1/IN0-1
CH31-15/IN2-15 through CH31-1/IN2-1
CH32-15/IN3-15 through CH32-1/IN3-1
CH33-15, CH33-14, CH33-12, CH33-11
CH33-9 through CH33-1
CH16-7, CH16-6

NOTE: Any other pushbuttons not specified may be on or off.

CH30 INBIT TEST

4. Perform the following DSKY operations:

a. VERB 11 NOUN 10 ENTR
b. 00030 ENTR

Row 1 shall indicate 37777 and Row 3 shall indicate 00030.

5. Press pushbuttons CH30-6/IN0-6 through CH30-1/IN0-1 lighting each specified pushbutton. Row 1 of the DSKY shall indicate 37700.

6. Press pushbuttons CH30-6/IN0-6 through CH30-1/IN0-1. Each pushbutton specified shall not be lighted. Row 1 of the DSKY shall indicate 37777.

CH31 INBIT TEST

8. Press pushbuttons CH31-14/IN2-14 through CH31-1/IN2-1 lighting each specified pushbutton. Row 1 of the DSKY shall indicate 40000.

9. Press pushbuttons CH31-14/IN2-14 through CH31-1/IN2-1. Each specified pushbutton shall not be lighted. Row 1 of the DSKY shall indicate 77777.

CH32 INBIT TEST

10. Perform the following DSKY operations:

a. VERB 11 NOUN 10 ENTR
b. 00032 ENTR

11. Set the Attitude Impulse Hand Control on the Indicator Control panel for the following positions and observe Row 1 of the DSKY for proper indications:

	Attitude Impulse Hand Control Position	DSKY Indication
a.	Up	77775
b.	Down	77776
c.	Left	77737
d.	Right	77757
e.	Clockwise	77773
f.	Counterclockwise	77767

12. Press pushbutton CH32-11/IN3-11. Row 1 of the DSKY shall indicate 75777.

13. Press pushbutton CH32-11/IN3-11. Row 1 of the DSKY shall indicate 77777.

UPLINK TEST

14. Make the following switch settings:

TAPE READER to ON
Press TAPE PREPARE pushbutton
TAPE PUNCH to ON
Press TAPE FREE RUN pushbutton
Press TAPE READER pushbutton
Press NEGATIVE pushbutton
Press POSITIVE pushbutton

15. Using the "0" and "1" keys on the Octal Keyboard, make a tape by punching the following from left to right. This tape should be prepared very carefully to insure a successful test.

a. 100010111010001
b. Press STOP CODE pushbutton

16. Press the TAPE PREPARE pushbutton to OFF and set the TAPE PUNCH switch to OFF.

17. Install the tape in the Tape Reader and make the following switch settings:

COUNTERS to Position 9
Press AGC COUNTERS pushbutton
Press CH33-10 pushbutton
UPLINK switch on the Indicator Control panel to ACCEPT.

NOTE: The G & N Mounting Fixture shall be set at the 0.0° position and a Master Initialization Condition shall be established.

1. Insure that the TELESCOPE TRUNNION switch on the Indicator Control panel is set to SLAVE TO SXT and the TRACKER switch is set to OFF.

2. Insure that the CH5 AC, OPT 800 ~ TO PH GEN, and 800 ~ 0 PH REFERENCE pushbuttons on the Oscillograph Signal Selector panel are lighted.

3. Set the CHANNEL 5 switch on the Oscillograph Signal Selector panel to 11 and monitor the SCT Trunnion Tach Mon. voltage.

4. Press the CHART SPEEDS 5 pushbutton on the Oscillograph Control panel.

5. Set the CONTROLLER COUPLING switch on the Indicator Control panel to DIRECT.

6, Perform the following DSKY operations:

a. VERB 16 NOUN 55 ENTR

b. Observe SXT Shaft Angle Displayed on Row 1.

c. Observe SXT TRN LOS Angle Displayed on Row 2.

7. Set the OPTICS MODE switch on the Indicator Control panel to ZERO. After approximately 20 seconds the DSKY displays all zeros on Row 1 and Row 2, set the OPTICS MODE switch to MAN.

8. Using the Optics hand controller, drive the optics to the position where Row 1 of

SUBSYSTEM G & N SYSTEM

ASSY

the DSKY displays the Shaft angle as +22500 and Row 2 displays the Trunnion LOS angle as +10000.

9. Sight through the SCT eyepiece and center a convenient laboratory object (object number 1) on the SCT reticle pattern.

10. Set the CONTROLLER COUPLING switch on the Indicator Control panel to RSLV and the CONTROLLER SPEED switch to MED.

NOTE: Read and understand steps 11 and 12 before proceeding.

11. Set CHANNEL 5 sensitivity on the Oscillograph Amplifier panel to 10 MV/MM. Start the Oscillograph by setting the CHART DRIVE switch on the Oscillograph Control panel to MM/SEC.

12. Quickly displace the Optics hand controller 45 degrees in the upper right hand quadrant while sighting through the SCT eyepiece. Release the Optics hand controller and press the EVENT MARKER pushbutton on the Oscillograph Control panel when the object number 1 leaves the SCT upper right field of view. Simultaneously press the MARK pushbutton on the Indicator Control panel and record the Row 1 display of the DSKY.

13. Stop the Oscillograph and record the elapsed time between the rise of the SCT Trunnion Tach Feedback voltage and the EVENT MARKER indication on the Oscillograph chart.

14. Set the CONTROLLER COUPLING switch on the Indicator Control panel to DIRECT.

15. Set the OPTICS MODE switch to ZERO.

16. Rotate the RETICLE BRIGHTNESS thumbwheel fully downward.

17. Increase lamp brightness by rotating the RETICLE BRIGHTNESS thumbwheel upward. Verify that the following lamps vary from dim to bright.

a. Optical reticle patterns

b. SCT digital readouts

IMPORTANT

INTERVAL

TOOLS AND MATERIAL

NOTE: 1. The Oscillograph sensitivities called out in this JDC are nominal values. Operator may change sensitivities as required.

2. The range of amplitude for some signals monitored on the Oscillograph in this JDC may require that the pen be offset from the normal center line for the zeroing position. The operator may offset pens for zeroing as required.

TEST POINT QUALIFICATION

1. Press OPTICS POWER ON pushbutton on Test Control panel and OPTICS POWER ON pushbutton shall light. Insure that the TELESCOPE TRUNNION switch on the Indicator Control panel is set to SLAVE TO SXT and the TRACKER switch is set to OFF.

2. Set the CONTROLLER COUPLING switch to DIRECT, the CONTROLLER SPEED switch to HI and the OPTICS MODE switch to ZERO. After 20 seconds, set the OPTICS MODE switch to MAN.

3. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 202 to monitor the SCT Trunnion MDA Output Mon. ϕ1 on Oscilloscope A.

VERIFICATION WITH SIDL REQUIRED BEFORE USE

DATE 30 JUN 66

JOB ZERO OPTICS TEST | **JDC** 12212 **REV** C **PAGE** 2 **OF** 3

SUBSYSTEM G & N SYSTEM | **ASSY**

4. Measure and record the steady-state peak-to-peak voltage indicated on the Oscilloscope after the initial acceleration transient while holding the Optics hand controller to the upper limit not longer than 10 seconds. Release the Optics hand controller.

5. Set the OPTICS MODE switch on the Indicator Control panel to ZERO. After 20 seconds, set the OPTICS MODE switch to MAN.

6. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 110 to monitor the SCT Shaft MDA Output MON. ϕ 1 on Oscilloscope A.

7. Measure and record the steady-state peak-to-peak voltage indicated on the Oscilloscope after the initial acceleration transient while holding the Optics hand controller to the right limit not longer than 10 seconds. Release the Optics hand controller and set the OPTICS MODE switch on the Indicator Control panel to ZERO.

OPTICS TIME TO ZERO

8. Insure that the CH 5 AC pushbutton on the Oscillograph Signal Selector panel is lighted.

9. Set CHANNEL 1 switch to 13 and CHANNEL 5 switch to 11 to monitor the following signal outputs:

a. SCT Shaft MDA Tach Mon. voltage on CHANNEL 1.

b. SCT Trunnion MDA Tach Mon. voltage on CHANNEL 5.

10. Set the OPTICS MODE switch on the Indicator Control panel to CMC.

11. Perform the following DSKY operations:

VERB 41	NOUN 55	ENTR
+27000		ENTR
+75000		ENTR

Wait until optics stop driving before proceeding.

12. Press the CHART SPEEDS 10 pushbutton on the Oscillograph Control panel and set the sensitivities on the Oscillograph Amplifier panel as follows:

a. CHANNEL 1 to 100 MV/MM

b. CHANNEL 5 to 100 MV/MM

13. Start the Oscillograph by setting the CHART DRIVE switch on the Oscillograph Control panel to MM/SEC and note that steady state signals appear on the Oscillograph chart.

14. Set the OPTICS MODE switch on the Indicator Control panel to ZERO.

15. When all signals reach steady state values, perform the following DSKY operations:

VERB 06 NOUN 55 ENTR

Record DSKY Row 1 and Row 2 indications. Wait approximately 5 seconds and set the CHART DRIVE switch on the Oscillograph Control panel to OFF. Set all sensitivities on the Oscillograph Amplifier to OFF.

16. Record the elapsed time between the steady state nulls on the Oscillograph chart for CHANNELS 1 and 5.

DATE 30 JUN 66

Record DSKY Row 1 and Row 2 indications. Wait approximately 5 seconds and set the CHART DRIVE switch on the Oscillograph Control panel to OFF. Set all sensitivities on the Oscillograph Amplifier to OFF.

16. Record the elapsed time between the steady state nulls on the Oscillograph chart for CHANNELS 1 and 5.

17. Set the VOLTMETER INPUT PAVM switch on the Primary Signal Selector panel to SIG 2. Set the CROSSBAR CONTROL to the positions below and measure the total and in-phase voltage of the following signals on the PAVM:

- a. Trunnion Fine Error with the CROSSBAR CONTROL set to 06.
- b. Shaft Fine Error with the CROSSBAR CONTROL set to 05.

18. Press OPTICS POWER ON pushbutton on Test Control panel and OPTICS POWER ON pushbutton shall go out.

IMPORTANT Avoid repeated slewing of SXT shaft and trunnion axes into their mechanical stops.

INTERVAL

TOOLS AND MATERIAL

NOTE: 1. The Oscillograph sensitivities called out in this JDC are nominal values. Operator may change sensitivities as required.

2. The range of amplitude for some signals monitored on the Oscillograph in this JDC may require that the pen be offset from the normal center line for the zeroing position. The operator may offset pens for zeroing as required.

TEST POINT QUALIFICATION

1. Press to light OPTICS POWER ON pushbutton on Test Control panel.

NOTE: Step 2 applies to Indicator Control panel 2021290 only.

2. Set switches on Indicator Control panel as follows:

- a. OPTICS ZERO to OFF then to ZERO for a minimum of 20 seconds and return to OFF
- b. OPTICS TEL TRUN to SLAVE TO SXT
- c. OPTICS COUPLING to DIRECT
- d. OPTICS MODE to MAN
- e. OPTICS SPEED to HI

VERIFICATION WITH SIDL REQUIRED BEFORE USE

DATE 30 JUN 66

JOB ZERO OPTICS TEST | JDC 12212 REV G PAGE 2 OF 3

SUBSYSTEM G & N SYSTEM | ASSY

NOTE: Step 2A applies to all Indicator Control panels except 2021290.

2A. Set switches on Indicator Control panel as follows:

- a. OPTICS MODE to MAN then to ZERO for a minimum of 20 seconds and return to MAN
- b. OPTICS CONTROLLER SPEED to HI
- c. OPTICS CONTROLLER COUPLING to DIRECT
- d. OPTICS TRACKER to OFF
- e. OPTICS TELESCOPE TRUNNION to SLAVE TO SXT

3. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 202 to monitor the SCT Trunnion MDA Output Mon. ∮1 on Oscilloscope A.

4. Measure and record the steady-state peak-to-peak voltage indicated on the Oscilloscope after the initial acceleration transient while holding the Optics Hand Controller to the upper limit not longer than 10 seconds. Release the Optics Hand Controller.

NOTE: Step 5 applies to Indicator Control panel 2021290 only.

5. Set OPTICS ZERO switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS ZERO switch to OFF.

NOTE: Step 5A applies all Indicator Control panels except 2021290.

5A. Set OPTICS MODE switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS MODE switch to MAN.

6. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 110 to monitor the SCT Shaft MDA Output MON. ∮1 on Oscilloscope A.

7. Measure and record the steady-state peak-to-peak voltage indicated on the Oscilloscope after the initial acceleration transient while holding the Optics Hand Controller to the right limit not longer than 10 seconds. Release the Optics Hand Controller.

OPTICS TIME TO ZERO

8. Insure that the CH 5 AC pushbutton on the Oscillograph Signal Selector panel is lighted.

9. Set CHANNEL 1 switch to 13 and CHANNEL 5 switch to 11 to monitor the following signal outputs:

- a. SCT Shaft MDA Tach Mon. voltage on CHANNEL 1.
- b. SCT Trunnion MDA Tach Mon. voltage on CHANNEL 5.

DATE 30 JUN 66

JOB ZERO OPTICS TEST | JDC 12212 REV G PAGE 3 OF 3

SUBSYSTEM G & N SYSTEM | ASSY

10. Press CHART SPEEDS 10 pushbutton on Oscillograph Control panel and set sensitivities on Oscillograph Amplifier panel as follows:

- a. CHANNEL 1 to 100 MV/MM
- b. CHANNEL 5 to 100 MV/MM

NOTE: Step 11 applies to Indicator Control panel 2021290 only.

11. Set OPTICS ZERO switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS ZERO switch to OFF.

NOTE: Step 11A applies to all Indicator Control panels except 2021290.

11A. Set OPTICS MODE switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS MODE switch to MAN.

12. With the Optics Hand Controller in upper left quadrant, drive the SXT until the TPAC indicates 180° ±1° shaft angle and 75° ±1° trunnion angle.

13. Start the Oscillograph by setting the CHART DRIVE switch on the Oscillograph Control panel to MM/SEC and note that steady state signals appear on the Oscillograph chart.

NOTE: Step 14 applies to Indicator Control panel 2021290.

14. Set OPTICS ZERO switch on Indicator Control panel to ZERO.

NOTE: Step 14A applies to all Indicator Control panels except 2021290.

14A. Set OPTICS MODE switch on Indicator Control panel to ZERO.

15. When all signals reach steady state values, perform the following DSKY operations:

VERB 06 NOUN 55 ENTR

Record DSKY Row 1 and Row 2 indications. Wait approximately 5 seconds and set the CHART DRIVE switch on the Oscillograph Control panel to OFF. Set all sensitivities on the Oscillograph Amplifier to OFF.

16. Record the elapsed time between the steady state nulls on the Oscillograph chart for CHANNELS 1 and 5.

17. Set the VOLTMETER INPUT PAVM switch on the Primary Signal Selector panel to SIG 2. Set the CROSSBAR CONTROL to the positions below and measure the total and in-phase voltage of the following signals on the PAVM:

- a. Trunnion Fine Error with the CROSSBAR CONTROL set to 06.
- b. Shaft Fine Error with the CROSSBAR CONTROL set to 05.

18. Press OPTICS POWER ON pushbutton on Test Control panel and OPTICS POWER ON pushbutton shall go out.

IMPORTANT

INTERVAL

TOOLS AND MATERIAL

NOTE: OSCILLOGRAPH AMPLIFIER sensitivities stated herein are nominal and may be adjusted at the discretion of the operator.

INITIALIZATION

1. Establish a Master Initialization condition.

2. Insure that the TELESCOPE TRUNNION switch on the Indicator Control panel is set to SLAVE TO SXT and the TRACKER switch is set to OFF.

3. Insure that CH4 AC, CH5 AC, CH6 AC, 800 ~ 0 PH REFERENCE and OPT 800 ~ PH GEN pushbuttons on oscillograph signal selector panel are lighted and SCT TRUN, SXT SHAFT and SXT TRUN switches on PSA Test Point Adapter are set to 1:1.

HIGH SPEED SLEW RATE

4. Set the CHANNEL 2 switch on the Oscillograph signal selector panel to 12 and CHANNEL 5 switch to 11, and monitor the following signals:

a. SXT Trunnion MDA Tach Mon. on CHANNEL 2.

b. SCT Trunnion MDA Tach Mon. on CHANNEL 5.

5. Perform the following DSKY operations:

a. VERB 16 NOUN 55 ENTR

b. Observe SXT SHAFT ANGLE Displayed on Row 1.

c. Observe SXT TRN LOS Angle Displayed Row 2.

VERIFICATION WITH SIDL REQUIRED BEFORE USE

DATE 30 JUN 66

JOB OPTICS SLEW RATE TEST JDC 12213 REV A PAGE 2 OF 6

SUBSYSTEM G AND N SYSTEM ASSY

6. Set the OPTICS MODE switch on the Indicator Control panel to ZERO.

7. Press CHART SPEEDS 5 pushbutton on the Oscillograph control panel and set CHANNEL 2 sensitivity on the Oscillograph Amplifier panel to 500 MV/MM and CHANNEL 5 sensitivity to 200 mv/mm.

8. Set SCOPE "A" INPUT to SIG 2 and CROSSBAR CONTROL to 14 on Primary Signal Selector panel to monitor SXT Trunnion MDA Output Mon. on Oscilloscope.

9. Set CONTROLLER COUPLING switch to DIRECT, CONTROLLER SPEED to HI, and after DSKY displays all zeroes on Row 1 and Row 2, set OPTICS MODE switch to MAN on Indicator Control panel.

10. Start oscillograph by setting CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

11. Measure and record the steady state peak to peak voltage indicated on the Oscilloscope while holding the Optics hand controller to the upper limit not longer than 10 seconds. Release the Optics hand Controller and set CHART DRIVE switch to OFF. Set all sensitivities on Oscillograph Amplifier panel to OFF and record maximum steady state indications of CHANNELS 2 and 5.

12. Set OPTICS MODE switch to ZERO.

13. Set CHANNEL 1 to 13 on the Oscillograph signal selector panel to monitor the following signals:

a. SCT Shaft MDA Tach Mon. on CHANNEL 1.

14. Set CHANNEL 1 sensitivity on Oscillograph Amplifier panel to 500 mv/mm.

15. Set SCOPE "A" INPUT to SIG 1 and CROSSBAR CONTROL to 14 on Primary Signal Selector panel to monitor SXT Shaft MDA Output Mon. on Oscilloscope.

16. Insure that 20 seconds have elapsed since step 12 and set the OPTICS MODE switch to MANUAL on the Indicator Control panel. Start the Oscillograph by setting CHART DRIVE switch on the Oscillograph Control panel to MM/SEC.

17. Measure and record the steady state peak to peak voltage indicated on the Oscilloscope while holding the Optics hand controller to the right limit not longer than 10 seconds. Release the Optics hand controller and set CHART DRIVE switch to OFF. Set all sensitivities on Oscillograph Amplifier panel to OFF and record the maximum steady state indications of CHANNEL 1.

18. Set the CHANNEL 1 switch on the Oscillograph Signal Selector panel to 12 to monitor the SXT Shaft MDA Tach Mon. voltage on CHANNEL 1.

DATE 30 JUN 66

JOB OPTICS SLEW RATE TEST JDC 12213 REV A PAGE 3 OF 6

SUBSYSTEM G AND N SYSTEM ASSY

19. Set CHANNEL 1 sensitivity to 500 mv/mm on the Oscillograph Amplifier panel.

20. Start the Oscillograph by setting the CHART DRIVE switch on the Oscillograph Control to MM/SEC.

21. Hold the Optics hand controller to the left limit not longer than 10 seconds. Release the Optics hand controller and set OPTICS MODE switch to ZERO.

22. Stop Oscillograph and record maximum steady state indication on CHANNEL 1.

MEDIUM SPEED SLEW RATE

23. Set VOLTMETER INPUT to PAVM SIG 1 and CROSSBAR CONTROL to 05. Set PAVM FUNCTION selector to 0° to monitor in phase voltage of the SCT Trunnion MDA TACH Mon.

24. Set the CONTROLLER SPEED to MED and insuring that 20 seconds have elapsed since step 21, set the OPTICS MODE switch to MAN on the Indicator Control panel.

25. Measure and record the voltage indicated on the PAVM while holding the Optics hand controller to the upper limit not longer than 20 seconds. Release the Optics hand controller.

26. Set CHANNEL 5 switch to 11 on Oscillograph Signal Selector panel to monitor the SCT Trunnion MDA TACH Mon.

27. Set VOLTMETER INPUT to PAVM SIG 2 and CROSSBAR CONTROL to 09 to monitor the SXT Trunnion MDA TACH Mon.

28. Set CHANNEL 5 sensitivity to 10 MV/MM on Oscillograph Amplifier panel. Press CHART SPEED 20 pushbutton on the Oscillograph control panel and set CHART DRIVE switch to MM/SEC.

29. Measure and record the voltage indicated on the PAVM while holding the Optics hand controller to the lower limit not longer than 20 seconds. Release the Optics hand controller and set CHART DRIVE switch to OFF. Set all sensitivities on Oscillograph Amplifier panel to OFF and record steady state indication of CHANNEL 5 per Figure 1. Record maximum width of any pulses at 1/2 positive peak or 1/2 negative peak points on CHANNEL 5 per Figure 1. If no pulses occur, write none on the data sheet.

30. Set the OPTICS MODE switch on the Indicator Control panel to ZERO.

31. Set VOLTMETER INPUT to PAVM SIG 2 and CROSSBAR CONTROL to 04 to monitor the SCT Shaft MDA TACH Mon.

32. Insure that 20 seconds have elapsed since step 30. Set OPTICS MODE switch on Indicator Control panel to MAN.

33. Measure and record the voltage indicated on the PAVM while holding the Optics hand controller to the right limit not longer than 20 seconds. Release the Optics hand controller.

DATE 30 JUN 66

JOB OPTICS SLEW RATE TEST JDC 12213 REV A PAGE 4 OF 6

SUBSYSTEM G AND N SYSTEM ASSY

34. Set CHANNEL 1 switch to 13 on Oscillograph Signal Selector panel to monitor the SCT Shaft MDA TACH Mon.

35. Set VOLTMETER INPUT to PAVM SIG 2 and CROSSBAR CONTROL to 07 to monitor the SXT Shaft MDA Tach Mon.

36. Set CHANNEL 1 sensitivity to 20 MV/MM on Oscillograph Amplifier panel and set CHART DRIVE switch to MM/SEC.

37. Measure and record the voltage indicated on the PAVM while holding the Optics hand controller to the left limit not longer than 20 seconds. Release the Optics hand controller and set CHART DRIVE switch to OFF. Set all sensitivities on Oscillograph Amplifier panel to OFF and record steady state indication of CHANNEL 4 per Figure 1. Record maximum width of any pulses at 1/2 positive peak or 1/2 negative peak points on CHANNEL 4 per Figure 1. If no pulses occur, write none on the data sheet.

LOW SPEED SLEW RATE

38. Set OPTICS MODE switch to ZERO and CONTROLLER SPEED switch to LO on Indicator Control panel.

39. Set the CHANNEL 2 switch to 12 and the CHANNEL 5 switch to 11 on the Oscillograph Signal Selector panel to monitor:

a. SXT Trun MDA Tach Mon. on CHANNEL 2.

b. SCT Trun MDA Tach Mon. on CHANNEL 5.

40. Set VOLTMETER INPUT to PAVM SIG 2 and CROSSBAR CONTROL to 06 to monitor the CDU Trunnion Fine Error.

41. Set CHANNEL 2 sensitivity to 10 MV/MM and CHANNEL 5 sensitivity to 5 MV/MM on Oscillograph Amplifier panel and set CHART DRIVE switch to MM/SEC.

42. Insure that 20 seconds have elapsed since step 38, then set OPTICS MODE switch on the Indicator Control panel to MAN.

43. Measure and record the voltage indicated on the PAVM while holding the Optics hand controller to the lower limit until the SXT is against the Trunnion stop as indicated by a nominal (unchanging) value on Row 2 of the DSKY. Set CHART DRIVE switch to OFF and continue holding the Optics hand controller to lower limit.

44. Set the VOLTMETER INPUT switch to PAVM SIG 1 and the CROSSBAR CONTROL to 06. Measure and record the SXT TRUN MDA P/A voltage indicated on the PAVM. Release the Optics hand controller.

45. Set all sensitivities on Oscillograph Amplifier panel to OFF and record steady state indication of CHANNELS 2 and 5 per Figure 1. Record maximum width of any pulses at 1/2 positive peak or 1/2 negative peak points on CHANNELS 2 and 5 per Figure 1.

DATE 30 JUN 66

46. Set VOLTMETER INPUT to PAVM SIG 1 and CROSSBAR CONTROL to 05 to monitor the SCT Trunnion MDA Tach Mon.

47. Set CHANNEL 2 sensitivity to 10 MV/MM and CHANNEL 5 sensitivity to 5 MV/MM on Oscillograph Amplifier panel and set CHART DRIVE switch to MM/SEC.

48. Measure and record the voltage indicated on the PAVM while holding the Optics hand controller to the upper limit until the SXT is against the Trunnion stop as indicated by a nominal (unchanging) value on Row 2 of the DSKY. Release the Optics hand controller.

49. Set all sensitivities on Oscillograph Amplifier panel to OFF and record steady state indication of CHANNELS 2 and 5 per Figure 1. Record maximum width of any pulses at 1/2 positive peak or 1/2 negative peak points on CHANNELS 2 and 5 per Figure 1.

50. Set the OPTICS MODE switch on the Indicator Control panel to ZERO.

51. Set the CHANNEL 1 switch to 12 and the CHANNEL 6 switch to 11 on the Oscillograph Signal Selector panel to monitor:

a. SXT Shaft MDA Tach Mon on CHANNEL 1.

52. Set VOLTMETER INPUT to PAVM SIG 2 and CROSSBAR CONTROL to 05 to monitor the CDU Shaft Fine Error.

53. Set CHANNEL 1 sensitivity to 10 MV/MM and CHANNEL 6 sensitivity to 2 MV/MM on the Oscillograph Amplifier panel and set CHART DRIVE switch to MM/SEC.

54. Insure that 20 seconds have elapsed since step 50, then set the OPTICS MODE switch on the Indicator Control panel to MAN.

55. Measure and record voltage indicated on PAVM while holding Optics hand controller to right limit until SXT is against Shaft stop as indicated by a nominal (unchanging) value of +270° on Row 1 of DSKY. Set CHART DRIVE switch to OFF and continue holding the Optics hand controller to right limit.

56. Set the VOLTMETER INPUT switch to PAVM SIG 2 and the CROSSBAR CONTROL to 03. Measure and record the SXT Shaft MDA P/A voltage on the PAVM. Release the Optics hand controller.

57. Set all sensitivities on Oscillograph Amplifier to OFF and record steady state indication of CHANNEL 1 per Figure 1. Record maximum width of any pulses at 1/2 positive peak or 1/2 negative peak points of CHANNEL 1 per Figure 1.

58. Set the CHANNEL 1 switch on the Oscillograph Signal Selector panel to 13 to monitor the SCT Shaft MDA Tach Mon. on CHANNEL 1 of the Oscillograph.

59. Set the CHANNEL 1 sensitivity control on the Oscillograph Amplifier panel to 5

MV/MM and set the CHART DRIVE switch on the Oscillograph control panel to MM/SEC.

60. Hold Optics hand controller to left limit until SXT is against shaft stop as indicated by a nominal (unchanging) value of -270° on Row 1 of DSKY. Release Optics hand controller and set the CHART DRIVE switch to OFF.

61. Set the CHANNEL 1 SENSITIVITY control on the Oscillograph Amplifier panel to OFF and record the maximum steady state indication on CHANNEL 1. Record maximum width of any pulses at 1/2 positive peak or 1/2 negative peak points of CHANNEL 1 per Figure 1.

62. Set the OPTICS MODE switch on the indicator control panel to ZERO.

63. Set the CROSSBAR CONTROL to the following positions and measure the quadrature voltage indicated on the PAVM after a minimum of 20 seconds have elapsed since initiating step 62. Insure that the Telescope Trunnion switch is in the SLAVE to SXT position.

Signal	CROSSBAR CONTROL
a. SCT Trun MDA P/A Mon.	103
b. SXT Shaft MDA P/A Mon.	203
c. SXT Trun MDA P/A Mon.	106
d. SCT Shaft MDA P/A Mon.	210

IMPORTANT

INTERVAL

TOOLS AND MATERIAL

NOTE: OSCILLOGRAPH AMPLIFIER sensitivities stated herein are nominal and may be adjusted at the discretion of the operator.

INITIALIZATION

1. Establish a Master Initialization condition and press OPTICS POWER ON pushbutton on Test Control panel so that OPTICS POWER ON pushbutton shall light.

2. Insure that the TELESCOPE TRUNNION switch on the Indicator Control panel is set to SLAVE TO SXT and the TRACKER switch is set to OFF.

3. Insure that CH4 AC, CH5 AC, CH6 AC, 800~ 0 PH REFERENCE and OPT 800~ PH GEN pushbuttons on oscillograph signal selector panel are lighted and SCT TRUN, SXT SHAFT and SXT TRUN switches on PSA Test Point Adapter are set to 1:1.

HIGH SPEED SLEW RATE

4. Set the CHANNEL 2 switch on the Oscillograph signal selector panel to 12 and CHANNEL 5 switch to 11, and monitor the following signals:
   a. SXT Trunnion MDA Tach Mon. on CHANNEL 2.
   b. SCT Trunnion MDA Tach Mon. on CHANNEL 5.

5. Perform the following DSKY operations:
   a. VERB 16 NOUN 55 ENTR
   b. Observe SXT SHAFT ANGLE Displayed on Row 1.
   c. Observe SXT TRN LOS Angle Displayed Row 2.

SUBSYSTEM G AND N SYSTEM **ASSY**

6. Set the OPTICS MODE switch on the Indicator Control panel to ZERO.

7. Press CHART SPEEDS 5 pushbutton on the Oscillograph control panel and set CHANNEL 2 sensitivity on the Oscillograph Amplifier panel to 500 MV/MM and CHANNEL 5 sensitivity to 200 mv/mm.

8. Set SCOPE "A" INPUT to SIG 2 and CROSSBAR CONTROL to 14 on Primary Signal Selector panel to monitor SXT Trunnion MDA Output Mon. on Oscilloscope.

9. Set CONTROLLER COUPLING switch to DIRECT, CONTROLLER SPEED to HI, and after DSKY displays all zeroes on Row 1 and Row 2, set OPTICS MODE switch to MAN on Indicator Control panel.

10. Start oscillograph by setting CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

11. Measure and record the steady state peak to peak voltage indicated on the Oscilloscope while holding the Optics hand controller to the upper limit not longer than 10 seconds. Release the Optics hand Controller and set CHART DRIVE switch to OFF. Set all sensitivities on Oscillograph Amplifier panel to OFF and record maximum steady state indications of CHANNELS 2 and 5.

12. Set OPTICS MODE switch to ZERO.

13. Set CHANNEL 1 to 13 on the Oscillograph signal selector panel to monitor the following signals:
   a. SCT Shaft MDA Tach Mon. on CHANNEL 1.

14. Set CHANNEL 1 sensitivity on Oscillograph Amplifier panel to 500 mv/mm.

15. Set SCOPE "A" INPUT to SIG 1 and CROSSBAR CONTROL to 14 on Primary Signal Selector panel to monitor SXT Shaft MDA Output Mon. on Oscilloscope.

16. Insure that 20 seconds have elapsed since step 12 and set the OPTICS MODE switch to MANUAL on the Indicator Control panel. Start the Oscillograph by setting CHART DRIVE switch on the Oscillograph Control panel to MM/SEC.

17. Measure and record the steady state peak to peak voltage indicated on the Oscilloscope while holding the Optics hand controller to the right limit not longer than 10 seconds. Release the Optics hand controller and set CHART DRIVE switch to OFF. Set all sensitivities on Oscillograph Amplifier panel to OFF and record the maximum steady state indications of CHANNEL 1.

18. Set the CHANNEL 1 switch on the Oscillograph Signal Selector panel to 12 to monitor the SXT Shaft MDA Tach Mon. voltage on CHANNEL 1.

DATE 30 JUN 66

JOB OPTICS SLEW RATE TEST **JDC** 12213 **REV** B **PAGE** 3 **OF** 6

SUBSYSTEM G AND N SYSTEM **ASSY**

19. Set CHANNEL 1 sensitivity to 500 mv/mm on the Oscillograph Amplifier panel.

20. Start the Oscillograph by setting the CHART DRIVE switch on the Oscillograph Control to MM/SEC.

21. Hold the Optics hand controller to the left limit not longer than 10 seconds. Release the Optics hand controller and set OPTICS MODE switch to ZERO.

22. Stop Oscillograph and record maximum steady state indication on CHANNEL 1.

MEDIUM SPEED SLEW RATE

23. Set VOLTMETER INPUT to PAVM SIG 1 and CROSSBAR CONTROL to 05. Set PAVM FUNCTION selector to 0° to monitor in phase voltage of the SCT Trunnion MDA TACH Mon.

24. Set the CONTROLLER SPEED to MED and insuring that 20 seconds have elapsed since step 21, set the OPTICS MODE switch to MAN on the Indicator Control panel.

25. Measure and record the voltage indicated on the PAVM while holding the Optics hand controller to the upper limit not longer than 20 seconds. Release the Optics hand controller.

26. Set CHANNEL 5 switch to 11 on Oscillograph Signal Selector panel to monitor the SCT Trunnion MDA TACH Mon.

27. Set VOLTMETER INPUT to PAVM SIG 2 and CROSSBAR CONTROL to 09 to monitor the SXT Trunnion MDA TACH Mon.

28. Set CHANNEL 5 sensitivity to 10 MV/MM on Oscillograph Amplifier panel. Press CHART SPEED 20 pushbutton on the Oscillograph control panel and set CHART DRIVE switch to MM/SEC.

29. Measure and record the voltage indicated on the PAVM while holding the Optics hand controller to the lower limit not longer than 20 seconds. Release the Optics hand controller and set CHART DRIVE switch to OFF. Set all sensitivities on Oscillograph Amplifier panel to OFF and record steady state indication of CHANNEL 5 per Figure 1. Record maximum width of any pulses at 1/2 positive peak or 1/2 negative peak points on CHANNEL 5 per Figure 1. If no pulses occur, write none on the data sheet.

30. Set the OPTICS MODE switch on the Indicator Control panel to ZERO.

31. Set VOLTMETER INPUT to PAVM SIG 2 and CROSSBAR CONTROL to 04 to monitor the SCT Shaft MDA TACH Mon.

32. Insure that 20 seconds have elapsed since step 30. Set OPTICS MODE switch on Indicator Control panel to MAN.

33. Measure and record the voltage indicated on the PAVM while holding the Optics hand controller to the right limit not longer than 20 seconds. Release the Optics hand controller.

DATE 30 JUN 66

JOB OPTICS SLEW RATE TEST **JDC** 12213 **REV** B **PAGE** 4 **OF** 6

SUBSYSTEM G AND N SYSTEM **ASSY**

34. Set CHANNEL 1 switch to 13 on Oscillograph Signal Selector panel to monitor the SCT Shaft MDA TACH Mon.

35. Set VOLTMETER INPUT to PAVM SIG 2 and CROSSBAR CONTROL to 07 to monitor the SXT Shaft MDA Tach Mon.

36. Set CHANNEL 1 sensitivity to 20 MV/MM on Oscillograph Amplifier panel and set CHART DRIVE switch to MM/SEC.

37. Measure and record the voltage indicated on the PAVM while holding the Optics hand controller to the left limit not longer than 20 seconds. Release the Optics hand controller and set CHART DRIVE switch to OFF. Set all sensitivities on Oscillograph Amplifier panel to OFF and record steady state indication of CHANNEL 4 per Figure 1. Record maximum width of any pulses at 1/2 positive peak or 1/2 negative peak points on CHANNEL 4 per Figure 1. If no pulses occur, write none on the data sheet.

LOW SPEED SLEW RATE

38. Set OPTICS MODE switch to ZERO and CONTROLLER SPEED switch to LO on Indicator Control panel.

39. Set the CHANNEL 2 switch to 12 and the CHANNEL 5 switch to 11 on the Oscillograph Signal Selector panel to monitor:
   a. SXT Trun MDA Tach Mon. on CHANNEL 2.
   b. SCT Trun MDA Tach Mon. on CHANNEL 5.

40. Set VOLTMETER INPUT to PAVM SIG 2 and CROSSBAR CONTROL to 06 to monitor the CDU Trunnion Fine Error.

41. Set CHANNEL 2 sensitivity to 10 MV/MM and CHANNEL 5 sensitivity to 5 MV/MM on Oscillograph Amplifier panel and set CHART DRIVE switch to MM/SEC.

42. Insure that 20 seconds have elapsed since step 38, then set OPTICS MODE switch on the Indicator Control panel to MAN.

43. Measure and record the voltage indicated on the PAVM while holding the Optics hand controller to the lower limit until the SXT is against the Trunnion stop as indicated by a nominal (unchanging) value on Row 2 of the DSKY. Set CHART DRIVE switch to OFF and continue holding the Optics hand controller to lower limit.

44. Set the VOLTMETER INPUT switch to PAVM SIG 1 and the CROSSBAR CONTROL to 06. Measure and record the SXT TRUN MDA P/A voltage indicated on the PAVM. Release the Optics hand controller.

45. Set all sensitivities on Oscillograph Amplifier panel to OFF and record steady state indication of CHANNELS 2 and 5 per Figure 1. Record maximum width of any pulses at 1/2 positive peak or 1/2 negative peak points on CHANNELS 2 and 5 per Figure 1.

DATE 30 JUN 66

46. Set VOLTMETER INPUT to PAVM SIG 1 and CROSSBAR CONTROL to 05 to monitor the SCT Trunnion MDA Tach Mon.

47. Set CHANNEL 2 sensitivity to 10 MV/MM and CHANNEL 5 sensitivity to 5 MV/MM on Oscillograph Amplifier panel and set CHART DRIVE switch to MM/SEC.

48. Measure and record the voltage indicated on the PAVM while holding the Optics hand controller to the upper limit until the SXT is against the Trunnion stop as indicated by a nominal (unchanging) value on Row 2 of the DSKY. Release the Optics hand controller.

49. Set all sensitivities on Oscillograph Amplifier panel to OFF and record steady state indication of CHANNELS 2 and 5 per Figure 1. Record maximum width of any pulses at 1/2 positive peak or 1/2 negative peak points on CHANNELS 2 and 5 per Figure 1.

50. Set the OPTICS MODE switch on the Indicator Control panel to ZERO.

51. Set the CHANNEL 1 switch to 12 and the CHANNEL 6 switch to 11 on the Oscillograph Signal Selector panel to monitor:

a. SXT Shaft MDA Tach Mon on CHANNEL 1.

52. Set VOLTMETER INPUT to PAVM SIG 2 and CROSSBAR CONTROL to 05 to monitor the CDU Shaft Fine Error.

53. Set CHANNEL 1 sensitivity to 10 MV/MM and CHANNEL 6 sensitivity to 2 MV/MM on the Oscillograph Amplifier panel and set CHART DRIVE switch to MM/SEC.

54. Insure that 20 seconds have elapsed since step 50, then set the OPTICS MODE switch on the Indicator Control panel to MAN.

55. Measure and record voltage indicated on PAVM while holding Optics hand controller to right limit until SXT is against Shaft stop as indicated by a nominal (unchanging) value of +270° on Row 1 of DSKY. Set CHART DRIVE switch to OFF and continue holding the Optics hand controller to right limit.

56. Set the VOLTMETER INPUT switch to PAVM SIG 2 and the CROSSBAR CONTROL to 03. Measure and record the SXT Shaft MDA P/A voltage on the PAVM. Release the Optics hand controller.

57. Set all sensitivities on Oscillograph Amplifier to OFF and record steady state indication of CHANNEL 1 per Figure 1. Record maximum width of any pulses at 1/2 positive peak or 1/2 negative peak points of CHANNEL 1 per Figure 1.

58. Set the CHANNEL 1 switch on the Oscillograph Signal Selector panel to 13 to monitor the SCT Shaft MDA Tach Mon. on CHANNEL 1 of the Oscillograph.

59. Set the CHANNEL 1 sensitivity control on the Oscillograph Amplifier panel to 5

MV/MM and set the CHART DRIVE switch on the Oscillograph control panel to MM/SEC.

60. Hold Optics hand controller to left limit until SXT is against shaft stop as indicated by a nominal (unchanging) value of -270° on Row 1 of DSKY. Release Optics hand controller and set the CHART DRIVE switch to OFF.

61. Set the CHANNEL 1 SENSITIVITY control on the Oscillograph Amplifier panel to OFF and record the maximum steady state indication on CHANNEL 1. Record maximum width of any pulses at 1/2 positive peak or 1/2 negative peak points of CHANNEL 1 per Figure 1.

62. Set the OPTICS MODE switch on the indicator control panel to ZERO.

63. Set the CROSSBAR CONTROL to the following positions and measure the quadrature voltage indicated on the PAVM after a minimum of 20 seconds have elapsed since initiating step 62. Insure that the Telescope Trunnion switch is in the SLAVE to SXT position.

Signal	CROSSBAR CONTROL
a. SCT Trun MDA P/A Mon.	103
b. SXT Shaft MDA P/A Mon.	203
c. SXT Trun MDA P/A Mon.	106
d. SCT Shaft MDA P/A Mon.	210

64. Press OPTICS POWER ON pushbutton on Test Control panel and OPTICS POWER ON pushbutton shall go out.

IMPORTANT

INTERVAL

TOOLS AND MATERIAL

NOTE: OSCILLOGRAPH AMPLIFIER sensitivities stated herein are nominal and may be adjusted at the discretion of the operator.

INITIALIZATION

1. Establish a Master Initialization condition (JDC 12215) and press OPTICS POWER ON pushbutton on Test Control panel so that OPTICS POWER ON pushbutton shall light.

2. Insure that the TELESCOPE TRUNNION switch on the Indicator Control panel is set to SLAVE TO SXT and the TRACKER switch is set to OFF.

3. Insure that CH4 AC, CH5 AC, CH6 AC, 800~ 0 PH REFERENCE and OPT 800~ PH GEN pushbuttons on oscillograph signal selector panel are lighted and SCT TRUN, SXT SHAFT and SXT TRUN switches on P&A Test Point Adapter are set to 1:1.

HIGH SPEED SLEW RATE

4. Set the CHANNEL 2 switch on the Oscillograph signal selector panel to 12 and CHANNEL 5 switch to 11, and monitor the following signals:

a. SXT Trunnion MDA Tach Mon. on CHANNEL 2.

b. SCT Trunnion MDA Tach Mon. on CHANNEL 5.

5. Perform the following DSKY operations:

a. VERB 16 NOUN 55 ENTR

b. Observe SXT SHAFT ANGLE Displayed on Row 1.

c. Observe SXT TRN LOS Angle Displayed Row 2.

VERIFICATION WITH SIDL REQUIRED BEFORE USE

6. Set the OPTICS MODE switch on the Indicator Control panel to ZERO.

7. Press CHART SPEEDS 5 pushbutton on the Oscillograph control panel and set CHANNEL 2 sensitivity on the Oscillograph Amplifier panel to 500 MV/MM and CHANNEL 5 sensitivity to 200 mv/mm.

8. Set SCOPE "A" INPUT to SIG 2 and CROSSBAR CONTROL to 14 on Primary Signal Selector panel to monitor SXT Trunnion MDA Output Mon. on Oscilloscope.

9. Set CONTROLLER COUPLING switch to DIRECT, CONTROLLER SPEED to HI, and after DSKY displays all zeroes on Row 1 and Row 2, set OPTICS MODE switch to MAN on Indicator Control panel.

10. Start oscillograph by setting CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

11. Measure and record the steady state peak to peak voltage indicated on the Oscilloscope while holding the Optics hand controller to the upper limit not longer than 10 seconds. Release the Optics hand Controller and set CHART DRIVE switch to OFF. Set all sensitivities on Oscillograph Amplifier panel to OFF and record maximum steady state indications of CHANNELS 2 and 5.

12. Set OPTICS MODE switch to ZERO.

13. Set CHANNEL 1 to 13 on the Oscillograph signal selector panel to monitor the following signals:

a. SCT Shaft MDA Tach Mon. on CHANNEL 1.

14. Set CHANNEL 1 sensitivity on Oscillograph Amplifier panel to 500 mv/mm.

15. Set SCOPE "A" INPUT to SIG 1 and CROSSBAR CONTROL to 14 on Primary Signal Selector panel to monitor SXT Shaft MDA Output Mon. on Oscilloscope.

16. Insure that 20 seconds have elapsed since step 12 and set the OPTICS MODE switch to MANUAL on the Indicator Control panel. Start the Oscillograph by setting CHART DRIVE switch on the Oscillograph Control panel to MM/SEC.

17. Measure and record the steady state peak to peak voltage indicated on the Oscilloscope while holding the Optics hand controller to the right limit not longer than 10 seconds. Release the Optics hand controller and set CHART DRIVE switch to OFF. Set all sensitivities on Oscillograph Amplifier panel to OFF and record the maximum steady state indications of CHANNEL 1.

18. Set the CHANNEL 1 switch on the Oscillograph Signal Selector panel to 12 to monitor the SXT Shaft MDA Tach Mon. voltage on CHANNEL 1.

19. Set CHANNEL 1 sensitivity to 500 mv/mm on the Oscillograph Amplifier panel.

20. Start the Oscillograph by setting the CHART DRIVE switch on the Oscillograph Control to MM/SEC.

21. Hold the Optics hand controller to the left limit not longer than 10 seconds. Release the Optics hand controller and set OPTICS MODE switch to ZERO.

22. Stop Oscillograph and record maximum steady state indication on CHANNEL 1.

MEDIUM SPEED SLEW RATE

23. Set VOLTMETER INPUT to PAVM SIG 1 and CROSSBAR CONTROL to 05. Set PAVM FUNCTION selector to 0° to monitor in phase voltage of the SCT Trunnion MDA TACH Mon.

24. Set the CONTROLLER SPEED to MED and insuring that 20 seconds have elapsed since step 21, set the OPTICS MODE switch to MAN on the Indicator Control panel.

25. Measure and record the voltage indicated on the PAVM while holding the Optics hand controller to the upper limit not longer than 20 seconds. Release the Optics hand controller.

26. Set CHANNEL 5 switch to 11 on Oscillograph Signal Selector panel to monitor the SCT Trunnion MDA TACH Mon.

27. Set VOLTMETER INPUT to PAVM SIG 2 and CROSSBAR CONTROL to 09 to monitor the SXT Trunnion MDA TACH Mon.

28. Set CHANNEL 5 sensitivity to 10 MV/MM on Oscillograph Amplifier panel. Press CHART SPEED 20 pushbutton on the Oscillograph control panel and set CHART DRIVE switch to MM/SEC.

29. Measure and record the voltage indicated on the PAVM while holding the Optics hand controller to the lower limit not longer than 20 seconds. Release the Optics hand controller and set CHART DRIVE switch to OFF. Set all sensitivities on Oscillograph Amplifier panel to OFF and record steady state indication of CHANNEL 5 per Figure 1. Record maximum width of any pulses at 1/2 positive peak or 1/2 negative peak points on CHANNEL 5 per Figure 1. If no pulses occur, write none on the data sheet.

30. Set the OPTICS MODE switch on the Indicator Control panel to ZERO.

31. Set VOLTMETER INPUT to PAVM SIG 2 and CROSSBAR CONTROL to 04 to monitor the SCT Shaft MDA TACH Mon.

32. Insure that 20 seconds have elapsed since step 30. Set OPTICS MODE switch on Indicator Control panel to MAN.

33. Measure and record the voltage indicated on the PAVM while holding the Optics hand controller to the right limit not longer than 20 seconds. Release the Optics hand controller.

34. Set CHANNEL 1 switch to 13 on Oscillograph Signal Selector panel to monitor the SCT Shaft MDA Tach Mon.

35. Set VOLTMETER INPUT to PAVM SIG 2 and CROSSBAR CONTROL to 07 to monitor the SXT Shaft MDA Tach Mon.

36. Set CHANNEL 1 sensitivity to 20 MV/MM on Oscillograph Amplifier panel and set CHART DRIVE switch to MM/SEC.

37. Measure and record the voltage indicated on the PAVM while holding the Optics hand controller to the left limit not longer than 20 seconds. Release the Optics hand controller and set CHART DRIVE switch to OFF. Set all sensitivities on Oscillograph Amplifier panel to OFF and record steady state indication of CHANNEL 4 per Figure 1. Record maximum width of any pulses at 1/2 positive peak or 1/2 negative peak points on CHANNEL 4 per Figure 1. If no pulses occur, write none on the data sheet.

LOW SPEED SLEW RATE

38. Set OPTICS MODE switch to ZERO and CONTROLLER SPEED switch to LO on Indicator Control panel.

39. Set the CHANNEL 2 switch to 12 and the CHANNEL 5 switch to 11 on the Oscillograph Signal Selector panel to monitor:

a. SXT Trun MDA Tach Mon. on CHANNEL 2.

b. SCT Trun MDA Tach Mon. on CHANNEL 5.

40. Set VOLTMETER INPUT to PAVM SIG 2 and CROSSBAR CONTROL to 06 to monitor the CDU Trunnion Fine Error.

41. Set CHANNEL 2 sensitivity to 10 MV/MM and CHANNEL 5 sensitivity to 5 MV/MM on Oscillograph Amplifier panel and set CHART DRIVE switch to MM/SEC.

42. Insure that 20 seconds have elapsed since step 38, then set OPTICS MODE switch on the Indicator Control panel to MAN.

43. Measure and record the voltage indicated on the PAVM while holding the Optics hand controller to the lower limit until the SXT is against the Trunnion stop as indicated by a nominal (unchanging) value on Row 2 of the DSKY. Set CHART DRIVE switch to OFF and continue holding the Optics hand controller to lower limit.

44. Set the VOLTMETER INPUT switch to PAVM SIG 1 and the CROSSBAR CONTROL to 06. Measure and record the SXT TRUN MDA P/A voltage indicated on the PAVM. Release the Optics hand controller.

45. Set all sensitivities on Oscillograph Amplifier panel to OFF and record steady state indication of CHANNELS 2 and 5 per Figure 1. Record maximum width of any pulses at 1/2 positive peak or 1/2 negative peak points on CHANNELS 2 and 5 per Figure 1.

46. Set VOLTMETER INPUT to PAVM SIG 1 and CROSSBAR CONTROL to 05 to monitor the SCT Trunnion MDA Tach Mon.

47. Set CHANNEL 2 sensitivity to 10 MV/MM and CHANNEL 5 sensitivity to 5 MV/MM on Oscillograph Amplifier panel and set CHART DRIVE switch to MM/SEC.

48. Measure and record the voltage indicated on the PAVM while holding the Optics hand controller to the upper limit until the SXT is against the Trunnion stop as indicated by a nominal (unchanging) value on Row 2 of the DSKY. Release the Optics hand controller.

49. Set all sensitivities on Oscillograph Amplifier panel to OFF and record steady state indication of CHANNELS 2 and 5 per Figure 1. Record maximum width of any pulses at 1/2 positive peak or 1/2 negative peak points on CHANNELS 2 and 5 per Figure 1.

50. Set the OPTICS MODE switch on the Indicator Control panel to ZERO.

51. Set the CHANNEL 1 switch to 12 and the CHANNEL 6 switch to 11 on the Oscillograph Signal Selector panel to monitor:

a. SXT Shaft MDA Tach Mon on CHANNEL 1.

52. Set VOLTMETER INPUT to PAVM SIG 2 and CROSSBAR CONTROL to 05 to monitor the CDU Shaft Fine Error.

53. Set CHANNEL 1 sensitivity to 10 MV/MM and CHANNEL 6 sensitivity to 2 MV/MM on the Oscillograph Amplifier panel and set CHART DRIVE switch to MM/SEC.

54. Insure that 20 seconds have elapsed since step 50, then set the OPTICS MODE switch on the Indicator Control panel to MAN.

55. Measure and record voltage indicated on PAVM while holding Optics hand controller to right limit until SXT is against Shaft stop as indicated by a nominal (unchanging) value of +270° on Row 1 of DSKY. Set CHART DRIVE switch to OFF and continue holding the Optics hand controller to right limit.

56. Set the VOLTMETER INPUT switch to PAVM SIG 2 and the CROSSBAR CONTROL to 03. Measure and record the SXT Shaft MDA P/A voltage on the PAVM. Release the Optics hand controller.

57. Set all sensitivities on Oscillograph Amplifier to OFF and record steady state indication of CHANNEL 1 per Figure 1. Record maximum width of any pulses at 1/2 positive peak or 1/2 negative peak points of CHANNEL 1 per Figure 1.

58. Set the CHANNEL 1 switch on the Oscillograph Signal Selector panel to 13 to monitor the SCT Shaft MDA Tach Mon. on CHANNEL 1 of the Oscillograph.

59. Set the CHANNEL 1 sensitivity control on the Oscillograph Amplifier panel to 5

MV/MM and set the CHART DRIVE switch on the Oscillograph control panel to MM/SEC.

60. Hold Optics hand controller to left limit until SXT is against shaft stop as indicated by Row 1 of DSKY displaying (unchanging) value of approximately +90°. Release Optics hand controller and set the CHART DRIVE switch to OFF.

61. Set the CHANNEL 1 SENSITIVITY control on the Oscillograph Amplifier panel to OFF and record the maximum steady state indication on CHANNEL 1. Record maximum width of any pulses at 1/2 positive peak or 1/2 negative peak points of CHANNEL 1 per Figure 1.

62. Set the OPTICS MODE switch on the indicator control panel to ZERO.

63. Set the CROSSBAR CONTROL to the following positions and measure the quadrature voltage indicated on the PAVM after a minimum of 20 seconds have elapsed since initiating step 62. Insure that the Telescope Trunnion switch is in the SLAVE to SXT position.

	Signal	CROSSBAR CONTROL
a.	SCT Trun MDA P/A Mon.	103
b.	SXT Shaft MDA P/A Mon.	203
c.	SXT Trun MDA P/A Mon.	106
d.	SCT Shaft MDA P/A Mon.	210

64. Press OPTICS POWER ON pushbutton on Test Control panel and OPTICS POWER ON pushbutton shall go out.

IMPORTANT

INTERVAL

TOOLS AND MATERIAL

* NOTE: OSCILLOGRAPH AMPLIFIER sensitivities stated herein are nominal and may be adjusted at the discretion of the operator.

INITIALIZATION

1. Perform JDC 12215 to establish a Master Initialization condition. Press OPTICS POWER ON pushbutton on Test Control panel so that OPTICS POWER ON pushbutton shall light.

2. Insure that the TELESCOPE TRUNNION switch on the Indicator Control panel is set to SLAVE TO SXT and the TRACKER switch is set to OFF.

3. Insure that CH4 AC, CH5 AC, CH6 AC, 800~ 0 PH REFERENCE and OPT 800~ PH GEN pushbuttons on oscillograph signal selector panel are lighted and SCT TRUN, SXT SHAFT and SXT TRUN switches on PSA Test Point Adapter are set to 1:1.

HIGH SPEED SLEW RATE

4. Set the CHANNEL 2 switch on the Oscillograph signal selector panel to 12 and CHANNEL 5 switch to 11, and monitor the following signals:

a. SXT Trunnion MDA Tach Mon. on CHANNEL 2.

b. SCT Trunnion MDA Tach Mon. on CHANNEL 5.

5. Perform the following DSKY operations:

a. VERB 16 NOUN 55 ENTR

b. Observe SXT SHAFT ANGLE Displayed on Row 1.

c. Observe SXT TRN LOS Angle Displayed Row 2.

VERIFICATION WITH SIDL REQUIRED BEFORE USE

---

6. Set the OPTICS MODE switch on the Indicator Control panel to ZERO.

7. Press CHART SPEEDS 5 pushbutton on the Oscillograph control panel and set CHANNEL 2 sensitivity on the Oscillograph Amplifier panel to 500 MV/MM and CHANNEL 5 sensitivity to 200 mv/mm.

8. Set SCOPE "A" INPUT to SIG 2 and CROSSBAR CONTROL to 14 on Primary Signal Selector panel to monitor SXT Trunnion MDA Output Mon. on Oscilloscope.

9. Set CONTROLLER COUPLING switch to DIRECT, CONTROLLER SPEED to HI, and after DSKY displays all zeroes on Row 1 and Row 2, set OPTICS MODE switch to MAN on Indicator Control panel.

10. Start oscillograph by setting CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

11. Measure and record the steady state peak to peak voltage indicated on the Oscilloscope while holding the Optics hand controller to the upper limit not longer than 10 seconds. Release the Optics hand Controller and set CHART DRIVE switch to OFF. Set all sensitivities on Oscillograph Amplifier panel to OFF and record maximum steady state indications of CHANNELS 2 and 5.

12. Set OPTICS MODE switch to ZERO.

13. Set CHANNEL 1 to 13 on the Oscillograph signal selector panel to monitor the following signals:

a. SCT Shaft MDA Tach Mon. on CHANNEL 1.

14. Set CHANNEL 1 sensitivity on Oscillograph Amplifier panel to 500 mv/mm.

15. Set SCOPE "A" INPUT to SIG 1 and CROSSBAR CONTROL to 14 on Primary Signal Selector panel to monitor SXT Shaft MDA Output Mon. on Oscilloscope.

16. Insure that 20 seconds have elapsed since step 12 and set the OPTICS MODE switch to MANUAL on the Indicator Control panel. Start the Oscillograph by setting CHART DRIVE switch on the Oscillograph Control panel to MM/SEC.

17. Measure and record the steady state peak to peak voltage indicated on the Oscilloscope while holding the Optics hand controller to the right limit not longer than 10 seconds. Release the Optics hand controller and set CHART DRIVE switch to OFF. Set all sensitivities on Oscillograph Amplifier panel to OFF and record the maximum steady state indications of CHANNEL 1.

18. Set the CHANNEL 1 switch on the Oscillograph Signal Selector panel to 12 to monitor the SXT Shaft MDA Tach Mon. voltage on CHANNEL 1.

---

19. Set CHANNEL 1 sensitivity to 500 mv/mm on the Oscillograph Amplifier panel.

20. Start the Oscillograph by setting the CHART DRIVE switch on the Oscillograph Control to MM/SEC.

21. Hold the Optics hand controller to the left limit not longer than 10 seconds. Release the Optics hand controller and set OPTICS MODE switch to ZERO.

22. Stop Oscillograph and record maximum steady state indication on CHANNEL 1.

MEDIUM SPEED SLEW RATE

23. Set VOLTMETER INPUT to PAVM SIG 1 and CROSSBAR CONTROL to 05. Set PAVM FUNCTION selector to 0° to monitor in phase voltage of the SCT Trunnion MDA TACH Mon.

24. Set the CONTROLLER SPEED to MED and insuring that 20 seconds have elapsed since step 21, set the OPTICS MODE switch to MAN on the Indicator Control panel.

25. Measure and record the voltage indicated on the PAVM while holding the Optics hand controller to the upper limit not longer than 20 seconds. Release the Optics hand controller.

26. Set CHANNEL 5 switch to 11 on Oscillograph Signal Selector panel to monitor the SCT Trunnion MDA TACH Mon.

27. Set VOLTMETER INPUT to PAVM SIG 2 and CROSSBAR CONTROL to 09 to monitor the SXT Trunnion MDA TACH Mon.

28. Set CHANNEL 5 sensitivity to 10 MV/MM on Oscillograph Amplifier panel. Press CHART SPEED 20 pushbutton on the Oscillograph control panel and set CHART DRIVE switch to MM/SEC.

29. Measure and record the voltage indicated on the PAVM while holding the Optics hand controller to the lower limit not longer than 20 seconds. Release the Optics hand controller and set CHART DRIVE switch to OFF. Set all sensitivities on Oscillograph Amplifier panel to OFF and record steady state indication of CHANNEL 5 per Figure 1. Record maximum width of any pulses at 1/2 positive peak or 1/2 negative peak points on CHANNEL 5 per Figure 1. If no pulses occur, write none on the data sheet.

30. Set the OPTICS MODE switch on the Indicator Control panel to ZERO.

31. Set VOLTMETER INPUT to PAVM SIG 2 and CROSSBAR CONTROL to 04 to monitor the SCT Shaft MDA TACH Mon.

32. Insure that 20 seconds have elapsed since step 30. Set OPTICS MODE switch on Indicator Control panel to MAN.

33. Measure and record the voltage indicated on the PAVM while holding the Optics hand controller to the right limit not longer than 20 seconds. Release the Optics hand controller.

---

34. Set CHANNEL 1 switch to 13 on Oscillograph Signal Selector panel to monitor the SCT Shaft MDA TACH Mon.

35. Set VOLTMETER INPUT to PAVM SIG 2 and CROSSBAR CONTROL to 07 to monitor the SXT Shaft MDA Tach Mon.

36. Set CHANNEL 1 sensitivity to 20 MV/MM on Oscillograph Amplifier panel and set CHART DRIVE switch to MM/SEC.

37. Measure and record the voltage indicated on the PAVM while holding the Optics hand controller to the left limit not longer than 20 seconds. Release the Optics hand controller and set CHART DRIVE switch to OFF. Set all sensitivities on Oscillograph Amplifier panel to OFF and record steady state indication of CHANNEL 1 per Figure 1. Record maximum width of any pulses at 1/2 positive peak or 1/2 negative peak points on CHANNEL 1 per Figure 1. If no pulses occur, write none on the data sheet.

LOW SPEED SLEW RATE

38. Set OPTICS MODE switch to ZERO and CONTROLLER SPEED switch to LO on Indicator Control panel.

39. Set the CHANNEL 2 switch to 12 and the CHANNEL 5 switch to 11 on the Oscillograph Signal Selector panel to monitor:

a. SXT Trun MDA Tach Mon. on CHANNEL 2.

b. SCT Trun MDA Tach Mon. on CHANNEL 5.

40. Set VOLTMETER INPUT to PAVM SIG 2 and CROSSBAR CONTROL to 06 to monitor the CDU Trunnion Fine Error.

41. Set CHANNEL 2 sensitivity to 10 MV/MM and CHANNEL 5 sensitivity to 5 MV/MM on Oscillograph Amplifier panel and set CHART DRIVE switch to MM/SEC.

42. Insure that 20 seconds have elapsed since step 38, then set OPTICS MODE switch on the Indicator Control panel to MAN.

43. Measure and record the voltage indicated on the PAVM while holding the Optics hand controller to the lower limit until the SXT is against the Trunnion stop as indicated by a nominal (unchanging) value on Row 2 of the DSKY. Set CHART DRIVE switch to OFF and continue holding the Optics hand controller to lower limit.

44. Set the VOLTMETER INPUT switch to PAVM SIG 1 and the CROSSBAR CONTROL to 06. Measure and record the SXT TRUN MDA P/A voltage indicated on the PAVM. Release the Optics hand controller.

45. Set all sensitivities on Oscillograph Amplifier panel to OFF and record steady state indication of CHANNELS 2 and 5 per Figure 1. Record maximum width of any pulses at 1/2 positive peak or 1/2 negative peak points on CHANNELS 2 and 5 per Figure 1.

IMPORTANT

INTERVAL

TOOLS AND MATERIAL

* NOTE: OSCILLOGRAPH AMPLIFIER sensitivities stated herein are nominal and may be adjusted at the discretion of the operator.

INITIALIZATION

1. Perform JDC 12215 to establish a Master Initialization condition. Press OPTICS POWER ON pushbutton on Test Control panel so that OPTICS POWER ON pushbutton shall light.

2. Insure that the TELESCOPE TRUNNION switch on the Indicator Control panel is set to SLAVE TO SXT and the TRACKER switch is set to OFF.

3. Insure that CH4 AC, CH5 AC, CH6 AC, 800~ 0 PH REFERENCE and OPT 800~ PH GEN pushbuttons on oscillograph signal selector panel are lighted and SCT TRUN, SXT SHAFT and SXT TRUN switches on PSA Test Point Adapter are set to 1:1.

HIGH SPEED SLEW RATE

4. Set the CHANNEL 2 switch on the Oscillograph signal selector panel to 12 and CHANNEL 5 switch to 11, and monitor the following signals:

a. SXT Trunnion MDA Tach Mon. on CHANNEL 2.

b. SCT Trunnion MDA Tach Mon. on CHANNEL 5.

5. Perform the following DSKY operations:

a. VERB 16 NOUN 55 ENTR

b. Observe SXT SHAFT ANGLE Displayed on Row 1.

c. Observe SXT TRN LOS Angle Displayed Row 2.

VERIFICATION WITH SIDL REQUIRED BEFORE USE

FORM 20143
Clg. 3-18-66

---

6. Set the OPTICS MODE switch on the Indicator Control panel to ZERO.

7. Press CHART SPEEDS 5 pushbutton on the Oscillograph control panel and set CHANNEL 2 sensitivity on the Oscillograph Amplifier panel to 500 MV/MM and CHANNEL 5 sensitivity to 200 mv/mm.

8. Set SCOPE "A" INPUT to SIG 2 and CROSSBAR CONTROL to 14 on Primary Signal Selector panel to monitor SXT Trunnion MDA Output Mon. on Oscilloscope.

9. Set CONTROLLER COUPLING switch to DIRECT, CONTROLLER SPEED to HI, and after DSKY displays all zeroes on Row 1 and Row 2, set OPTICS MODE switch to MAN on Indicator Control panel.

10. Start oscillograph by setting CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

11. Measure and record the steady state peak to peak voltage indicated on the Oscilloscope while holding the Optics hand controller to the upper limit not longer than 10 seconds. Release the Optics hand Controller and set CHART DRIVE switch to OFF. Set all sensitivities on Oscillograph Amplifier panel to OFF and record maximum steady state indications of CHANNELS 2 and 5.

12. Set OPTICS MODE switch to ZERO.

13. Set CHANNEL 1 to 13 on the Oscillograph signal selector panel to monitor the following signals:

a. SCT Shaft MDA Tach Mon. on CHANNEL 1.

14. Set CHANNEL 1 sensitivity on Oscillograph Amplifier panel to 500 mv/mm.

15. Set SCOPE "A" INPUT to SIG 1 and CROSSBAR CONTROL to 14 on Primary Signal Selector panel to monitor SXT Shaft MDA Output Mon. on Oscilloscope.

16. Insure that 20 seconds have elapsed since step 12 and set the OPTICS MODE switch to MANUAL on the Indicator Control panel. Start the Oscillograph by setting CHART DRIVE switch on the Oscillograph Control panel to MM/SEC.

17. Measure and record the steady state peak to peak voltage indicated on the Oscilloscope while holding the Optics hand controller to the right limit not longer than 10 seconds. Release the Optics hand controller and set CHART DRIVE switch to OFF. Set all sensitivities on Oscillograph Amplifier panel to OFF and record the maximum steady state indications of CHANNEL 1.

18. Set the CHANNEL 1 switch on the Oscillograph Signal Selector panel to 12 to monitor the SXT Shaft MDA Tach Mon. voltage on CHANNEL 1.

---

19. Set CHANNEL 1 sensitivity to 500 mv/mm on the Oscillograph Amplifier panel.

20. Start the Oscillograph by setting the CHART DRIVE switch on the Oscillograph Control to MM/SEC.

21. Hold the Optics hand controller to the left limit not longer than 10 seconds. Release the Optics hand controller and set OPTICS MODE switch to ZERO.

22. Stop Oscillograph and record maximum steady state indication on CHANNEL 1.

MEDIUM SPEED SLEW RATE

23. Set VOLTMETER INPUT to PAVM SIG 1 and CROSSBAR CONTROL to 05. Set PAVM FUNCTION selector to 0° to monitor in phase voltage of the SCT Trunnion MDA TACH Mon.

24. Set the CONTROLLER SPEED to MED and insuring that 20 seconds have elapsed since step 21, set the OPTICS MODE switch to MAN on the Indicator Control panel.

25. Measure and record the voltage indicated on the PAVM while holding the Optics hand controller to the upper limit not longer than 20 seconds. Release the Optics hand controller.

26. Set CHANNEL 5 switch to 11 on Oscillograph Signal Selector panel to monitor the SCT Trunnion MDA TACH Mon.

27. Set VOLTMETER INPUT to PAVM SIG 2 and CROSSBAR CONTROL to 09 to monitor the SXT Trunnion MDA TACH Mon.

28. Set CHANNEL 5 sensitivity to 10 MV/MM on Oscillograph Amplifier panel. Press CHART SPEED 20 pushbutton on the Oscillograph control panel and set CHART DRIVE switch to MM/SEC.

29. Measure and record the voltage indicated on the PAVM while holding the Optics hand controller to the lower limit not longer than 20 seconds. Release the Optics hand controller and set CHART DRIVE switch to OFF. Set all sensitivities on Oscillograph Amplifier panel to OFF and record steady state indication of CHANNEL 5 per Figure 1. Record maximum width of any pulses at 1/2 positive peak or 1/2 negative peak points on CHANNEL 5 per Figure 1. If no pulses occur, write none on the data sheet.

30. Set the OPTICS MODE switch on the Indicator Control panel to ZERO.

31. Set VOLTMETER INPUT to PAVM SIG 2 and CROSSBAR CONTROL to 04 to monitor the SCT Shaft MDA TACH Mon.

32. Insure that 20 seconds have elapsed since step 30. Set OPTICS MODE switch on Indicator Control panel to MAN.

33. Measure and record the voltage indicated on the PAVM while holding the Optics hand controller to the right limit not longer than 20 seconds. Release the Optics hand controller.

---

34. Set CHANNEL 1 switch to 13 on Oscillograph Signal Selector panel to monitor the SCT Shaft MDA Tach Mon.

35. Set VOLTMETER INPUT to PAVM SIG 2 and CROSSBAR CONTROL to 07 to monitor the SXT Shaft MDA Tach Mon.

36. Set CHANNEL 1 sensitivity to 20 MV/MM on Oscillograph Amplifier panel and set CHART DRIVE switch to MM/SEC.

37. Measure and record the voltage indicated on the PAVM while holding the Optics hand controller to the left limit not longer than 20 seconds. Release the Optics hand controller and set CHART DRIVE switch to OFF. Set all sensitivities on Oscillograph Amplifier panel to OFF and record steady state indication of CHANNEL 1 per Figure 1. Record maximum width of any pulses at 1/2 positive peak or 1/2 negative peak points on CHANNEL 1 per Figure 1. If no pulses occur, write none on the data sheet.

LOW SPEED SLEW RATE

38. Set OPTICS MODE switch to ZERO and CONTROLLER SPEED switch to LO on Indicator Control panel.

39. Set the CHANNEL 2 switch to 12 and the CHANNEL 5 switch to 11 on the Oscillograph Signal Selector panel to monitor:

a. SXT Trun MDA Tach Mon. on CHANNEL 2.

b. SCT Trun MDA Tach Mon. on CHANNEL 5.

40. Set VOLTMETER INPUT to PAVM SIG 2 and CROSSBAR CONTROL to 06 to monitor the CDU Trunnion Fine Error.

41. Set CHANNEL 2 sensitivity to 10 MV/MM and CHANNEL 5 sensitivity to 5 MV/MM on Oscillograph Amplifier panel and set CHART DRIVE switch to MM/SEC.

42. Insure that 20 seconds have elapsed since step 38, then set OPTICS MODE switch on the Indicator Control panel to MAN.

43. Measure and record the voltage indicated on the PAVM while holding the Optics hand controller to the lower limit until the SXT is against the Trunnion stop as indicated by a nominal (unchanging) value on Row 2 of the DSKY. Set CHART DRIVE switch to OFF and continue holding the Optics hand controller to lower limit.

44. Set the VOLTMETER INPUT switch to PAVM SIG 1 and the CROSSBAR CONTROL to 06. Measure and record the SXT TRUN MDA P/A voltage indicated on the PAVM. Release the Optics hand controller.

45. Set all sensitivities on Oscillograph Amplifier panel to OFF and record steady state indication of CHANNELS 2 and 5 per Figure 1. Record maximum width of any pulses at 1/2 positive peak or 1/2 negative peak points on CHANNELS 2 and 5 per Figure 1.

JOB OPTICS SLEW RATE TEST | JDC 12213 REV D PAGE 5 OF 6

SUBSYSTEM G AND N SYSTEM | ASSY

46. Set VOLTMETER INPUT to PAVM SIG 1 and CROSSBAR CONTROL to 05 to monitor the SCT Trunnion MDA Tach Mon.

47. Set CHANNEL 2 sensitivity to 10 MV/MM and CHANNEL 5 sensitivity to 5 MV/MM on Oscillograph Amplifier panel and set CHART DRIVE switch to MM/SEC.

48. Measure and record the voltage indicated on the PAVM while holding the Optics hand controller to the upper limit until the SXT is against the Trunnion stop as indicated by a nominal (unchanging) value on Row 2 of the DSKY. Release the Optics hand controller.

49. Set all sensitivities on Oscillograph Amplifier panel to OFF and record steady state indication of CHANNELS 2 and 5 per Figure 1. Record maximum width of any pulses at 1/2 positive peak or 1/2 negative peak points on CHANNELS 2 and 5 per Figure 1.

50. Set the OPTICS MODE switch on the Indicator Control panel to ZERO.

51. Set the CHANNEL 1 switch to 12 and the CHANNEL 6 switch to 11 on the Oscillograph Signal Selector panel to monitor:

a. SXT Shaft MDA Tach Mon on CHANNEL 1.

52. Set VOLTMETER INPUT to PAVM SIG 2 and CROSSBAR CONTROL to 05 to monitor the CDU Shaft Fine Error.

53. Set CHANNEL 1 sensitivity to 10 MV/MM and CHANNEL 6 sensitivity to 2 MV/MM on the Oscillograph Amplifier panel and set CHART DRIVE switch to MM/SEC.

54. Insure that 20 seconds have elapsed since step 50, then set the OPTICS MODE switch on the Indicator Control panel to MAN.

55. Measure and record voltage indicated on PAVM while holding Optics hand controller to right limit until SXT is against Shaft stop as indicated by a nominal (unchanging) value of +270° on Row 1 of DSKY. Set CHART DRIVE switch to OFF and continue holding the Optics hand controller to right limit.

56. Set the VOLTMETER INPUT switch to PAVM SIG 2 and the CROSSBAR CONTROL to 03. Measure and record the SXT Shaft MDA P/A voltage on the PAVM. Release the Optics hand controller.

57. Set all sensitivities on Oscillograph Amplifier to OFF and record steady state indication of CHANNEL 1 per Figure 1. Record maximum width of any pulses at 1/2 positive peak or 1/2 negative peak points of CHANNEL 1 per Figure 1.

58. Set the CHANNEL 1 switch on the Oscillograph Signal Selector panel to 13 to monitor the SCT Shaft MDA Tach Mon. on CHANNEL 1 of the Oscillograph.

59. Set the CHANNEL 1 sensitivity control on the Oscillograph Amplifier panel to 5

DATE 30 JUN 66

SUBSYSTEM G AND N SYSTEM | ASSY

MV/MM and set the CHART DRIVE switch on the Oscillograph control panel to MM/SEC.

60. Hold Optics hand controller to left limit until SXT is against shaft stop as indicated by Row 1 of DSKY displaying (unchanging) value of approximately +90°. Release Optics hand controller and set the CHART DRIVE switch to OFF.

61. Set the CHANNEL 1 SENSITIVITY control on the Oscillograph Amplifier panel to OFF and record the maximum steady state indication on CHANNEL 1. Record maximum width of any pulses at 1/2 positive peak or 1/2 negative peak points of CHANNEL 1 per Figure 1.

62. Set the OPTICS MODE switch on the indicator control panel to ZERO.

63. Set the CROSSBAR CONTROL to the following positions and measure the quadrature voltage indicated on the PAVM after a minimum of 20 seconds have elapsed since initiating step 62. Insure that the Telescope Trunnion switch is in the SLAVE to SXT position.

Signal	CROSSBAR CONTROL
a. SCT Trun MDA P/A Mon.	103
b. SXT Shaft MDA P/A Mon.	203
c. SXT Trun MDA P/A Mon.	106
d. SCT Shaft MDA P/A Mon.	210

64. Press OPTICS POWER ON pushbutton on Test Control panel and OPTICS POWER ON pushbutton shall go out.

46. Set VOLTMETER INPUT to PAVM SIG 1 and CROSSBAR CONTROL to 05 to monitor the SCT Trunnion MDA Tach Mon.

47. Set CHANNEL 2 sensitivity to 10 MV/MM and CHANNEL 5 sensitivity to 5 MV/MM on Oscillograph Amplifier panel and set CHART DRIVE switch to MM/SEC.

48. Measure and record the voltage indicated on the PAVM while holding the Optics hand controller to the upper limit until the SXT is against the Trunnion stop as indicated by a nominal (unchanging) value on Row 2 of the DSKY. Release the Optics hand controller.

49. Set all sensitivities on Oscillograph Amplifier panel to OFF and record steady state indication of CHANNELS 2 and 5 per Figure 1. Record maximum width of any pulses at 1/2 positive peak or 1/2 negative peak points on CHANNELS 2 and 5 per Figure 1.

50. Set the OPTICS MODE switch on the Indicator Control panel to ZERO.

51. Set the CHANNEL 1 switch to 12 and the CHANNEL 6 switch to 11 on the Oscillograph Signal Selector panel to monitor:

a. SXT Shaft MDA Tach Mon on CHANNEL 1.

52. Set VOLTMETER INPUT to PAVM SIG 2 and CROSSBAR CONTROL to 05 to monitor the CDU Shaft Fine Error.

53. Set CHANNEL 1 sensitivity to 10 MV/MM and CHANNEL 6 sensitivity to 2 MV/MM on the Oscillograph Amplifier panel and set CHART DRIVE switch to MM/SEC.

54. Insure that 20 seconds have elapsed since step 50, then set the OPTICS MODE switch on the Indicator Control panel to MAN.

55. Measure and record voltage indicated on PAVM while holding Optics hand controller to right limit until SXT is against Shaft stop as indicated by a nominal (unchanging) value of +270° on Row 1 of DSKY. Set CHART DRIVE switch to OFF and continue holding the Optics hand controller to right limit.

56. Set the VOLTMETER INPUT switch to PAVM SIG 2 and the CROSSBAR CONTROL to 03. Measure and record the SXT Shaft MDA P/A voltage on the PAVM. Release the Optics hand controller.

57. Set all sensitivities on Oscillograph Amplifier to OFF and record steady state indication of CHANNEL 1 per Figure 1. Record maximum width of any pulses at 1/2 positive peak or 1/2 negative peak points of CHANNEL 1 per Figure 1.

58. Set the CHANNEL 1 switch on the Oscillograph Signal Selector panel to 13 to monitor the SCT Shaft MDA Tach Mon. on CHANNEL 1 of the Oscillograph.

59. Set the CHANNEL 1 sensitivity control on the Oscillograph Amplifier panel to 5 MV/MM and set the CHART DRIVE switch on the Oscillograph control panel to MM/SEC.

---

60. Hold Optics hand controller to left limit until SXT is against shaft stop as indicated by Row 1 of DSKY displaying (unchanging) value of approximately +90°. Release Optics hand controller and set the CHART DRIVE switch to OFF.

61. Set the CHANNEL 1 SENSITIVITY control on the Oscillograph Amplifier panel to OFF and record the maximum steady state indication on CHANNEL 1. Record maximum width of any pulses at 1/2 positive peak or 1/2 negative peak points of CHANNEL 1 per Figure 1.

62. Set the OPTICS MODE switch on the indicator control panel to ZERO.

63. Set the CROSSBAR CONTROL to the following positions and measure the quadrature voltage indicated on the PAVM after a minimum of 20 seconds have elapsed since initiating step 62. Insure that the Telescope Trunnion switch is in the SLAVE to SXT position.

	Signal	CROSSBAR CONTROL

IMPORTANT

INTERVAL

TOOLS AND MATERIAL

NOTE: Oscillograph Amplifier sensitivities stated herein are nominal and may be adjusted at the discretion of the operator.

INITIALIZATION

1. Perform JDC 12215 to establish a Master Initialization condition. Press OPTICS POWER ON pushbutton on Test Control panel so that OPTICS POWER ON pushbutton shall light.

2. Insure that the TELESCOPE TRUNNION switch on the Indicator Control panel is set to SLAVE TO SXT and the TRACKER switch is set to OFF.

3. Insure that CH4 AC, CH5 AC, CH6 AC, 800~ 0 PH REFERENCE and OPT 800~ PH GEN pushbuttons on Oscillograph Signal Selector panel are lighted and SCT TRUN, SXT SHAFT and SXT TRUN switches on PSA Test Point Adapter are set to 1:1.

HIGH SPEED SLEW RATE

4. Set the CHANNEL 2 switch on the Oscillograph Signal Selector panel to 12 and CHANNEL 5 switch to 11, and monitor the following signals:

a. SXT Trunnion MDA Tach Mon. on CHANNEL 2.

b. SCT Trunnion MDA Tach Mon. on CHANNEL 5.

5. Deleted

VERIFICATION WITH SIDL REQUIRED BEFORE USE

DATE 30 JUN 66

JOB OPTICS SLEW RATE TEST
JDC 12213 REV E PAGE 2 OF 6
SUBSYSTEM G AND N SYSTEM
ASSY

6. Set the OPTICS MODE switch on the Indicator Control panel to ZERO.

7. Press CHART SPEEDS 5 pushbutton on the Oscillograph Control panel and set CHANNEL 2 sensitivity on the Oscillograph Amplifier panel to 500 MV/MM and CHANNEL 5 sensitivity to 200 mv/mm.

8. Set SCOPE "A" INPUT to SIG 2 and CROSSBAR CONTROL to 14 on Primary Signal Selector panel to monitor SXT Trunnion MDA Output Mon. on Oscilloscope.

9. Set CONTROLLER COUPLING switch to DIRECT, CONTROLLER SPEED to HI, and after approximately 20 seconds set OPTICS MODE switch to MAN on Indicator Control panel.

10. Start Oscillograph by setting CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

11. Measure and record the steady state peak to peak voltage indicated on the Oscilloscope while holding the Optics Hand Controller to the upper limit not longer than 10 seconds. Release the Optics Hand Controller and set CHART DRIVE switch to OFF. Set all sensitivities on Oscillograph Amplifier panel to OFF and record maximum steady state indications of CHANNELS 2 and 5.

12. Set OPTICS MODE switch to ZERO.

13. Set CHANNEL 1 on the Oscillograph Signal Selector panel to 13 and monitor SCT Shaft MDA Tach Mon. signal on CHANNEL 1.

14. Set CHANNEL 1 sensitivity on Oscillograph Amplifier panel to 500 mv/mm.

15. Set SCOPE "A" INPUT to SIG 1 and CROSSBAR CONTROL to 14 on Primary Signal Selector panel to monitor SXT Shaft MDA Output Mon. on Oscilloscope.

16. Insure that 20 seconds have elapsed since step 12 and set the OPTICS MODE switch to MANUAL on the Indicator Control panel. Start the Oscillograph by setting CHART DRIVE switch on the Oscillograph Control panel to MM/SEC.

17. Measure and record the steady state peak to peak voltage indicated on the Oscilloscope while holding the Optics Hand Controller to the right limit not longer than 10 seconds. Release the Optics Hand Controller and set CHART DRIVE switch to OFF. Set all sensitivities on Oscillograph Amplifier panel to OFF and record the maximum steady state indications of CHANNEL 1.

18. Set the CHANNEL 1 switch on the Oscillograph Signal Selector panel to 12 to monitor the SXT Shaft MDA Tach Mon. voltage on CHANNEL 1.

DATE 30 JUN 66

JOB OPTICS SLEW RATE TEST

19. Set CHANNEL 1 sensitivity to 500 mv/mm on the Oscillograph Amplifier panel.

20. Start the Oscillograph by setting the CHART DRIVE switch on the Oscillograph Control panel to MM/SEC.

21. Hold the Optics Hand Controller to the left limit not longer than 10 seconds. Release the Optics Hand Controller and set OPTICS MODE switch to ZERO.

22. Stop Oscillograph and record maximum steady state indication on CHANNEL 1.

MEDIUM SPEED SLEW RATE

23. Set VOLTMETER INPUT to PAVM SIG 1 and CROSSBAR CONTROL to 05. Set PAVM FUNCTION selector to 0° to monitor in phase voltage of the SCT Trunnion MDA TACH Mon.

24. Set the CONTROLLER SPEED to MED and insuring that 20 seconds have elapsed since step 21, set the OPTICS MODE switch to MAN on the Indicator Control panel.

25. Measure and record the voltage indicated on the PAVM while holding the Optics Hand Controller to the upper limit not longer than 20 seconds. Release the Optics hand controller.

26. Set CHANNEL 5 switch to 11 on Oscillograph Signal Selector panel to monitor the SCT Trunnion MDA TACH Mon.

27. Set VOLTMETER INPUT to PAVM SIG 2 and CROSSBAR CONTROL to 09 to monitor the SXT Trunnion MDA TACH Mon.

28. Set CHANNEL 5 sensitivity to 10 MV/MM on Oscillograph Amplifier panel. Press CHART SPEEDS 20 pushbutton on the Oscillograph Control Panel and set CHART DRIVE switch to MM/SEC.

29. Measure and record the voltage indicated on the PAVM while holding the Optics Hand Controller to the lower limit not longer than 20 seconds. Release the Optics Hand Controller and set CHART DRIVE switch to OFF. Set all sensitivities on Oscillograph Amplifier panel to OFF and record steady state indication of CHANNEL 5 per Figure 1. Record maximum width of any pulses at 1/2 positive peak or 1/2 negative peak points on CHANNEL 5 per Figure 1. If no pulses occur, write none on the data sheet.

30. Set the OPTICS MODE switch on the Indicator Control panel to ZERO.

31. Set VOLTMETER INPUT to PAVM SIG 2 and CROSSBAR CONTROL to 04 to monitor the SCT Shaft MDA TACH Mon.

32. Insure that 20 seconds have elapsed since step 30. Set OPTICS MODE switch on Indicator Control panel to MAN.

33. Measure and record the voltage indicated on the PAVM while holding the Optics Hand Controller to the right limit not longer than 20 seconds. Release the Optics Hand Controller.

34. Set CHANNEL 1 switch to 13 on Oscillograph Signal Selector panel to monitor the SCT Shaft MDA TACH Mon.

35. Set VOLTMETER INPUT to PAVM SIG 2 and CROSSBAR CONTROL to 07 to monitor the SXT Shaft MDA Tach Mon.

36. Set CHANNEL 1 sensitivity to 20 MV/MM on Oscillograph Amplifier panel and set CHART DRIVE switch to MM/SEC.

37. Measure and record the voltage indicated on the PAVM while holding the Optics Hand Controller to the left limit not longer than 20 seconds. Release the Optics Hand Controller and set CHART DRIVE switch to OFF. Set all sensitivities on Oscillograph Amplifier panel to OFF and record steady state indication of CHANNEL 1 per Figure 1. Record maximum width of any pulses at 1/2 positive peak or 1/2 negative peak points on CHANNEL 1 per Figure 1. If no pulses occur, write none on the data sheet.

LOW SPEED SLEW RATE

38. Set OPTICS MODE switch to ZERO and CONTROLLER SPEED switch to LO on Indicator Control panel.

39. Set the CHANNEL 2 switch to 12 and the CHANNEL 5 switch to 11 on the Oscillograph Signal Selector panel to monitor:

a. SXT Trun MDA Tach Mon. on CHANNEL 2.

b. SCT Trun MDA Tach Mon. on CHANNEL 5.

40. Set VOLTMETER INPUT to PAVM SIG 2 and CROSSBAR CONTROL to 06 to monitor the CDU Trunnion Fine Error.

41. Set CHANNEL 2 sensitivity to 10 MV/MM and CHANNEL 5 sensitivity to 5 MV/MM on Oscillograph Amplifier panel and set CHART DRIVE switch to MM/SEC.

42. Insure that 20 seconds have elapsed since step 38, then set OPTICS MODE switch on the Indicator Control panel to MAN.

43. Measure and record the voltage indicated on the PAVM while holding the Optics Hand Controller to the lower limit until the SXT is against the Trunnion stop as indicated by a nominal (unchanging) value on Row 2 of the DSKY. Set CHART DRIVE switch to OFF and continue holding the Optics Hand Controller to lower limit.

44. Set the VOLTMETER INPUT switch to PAVM SIG 1 and the CROSSBAR CONTROL to 06. Measure and record the SXT TRUN MDA P/A voltage indicated on the PAVM. Release the Optics Hand Controller.

45. Set all sensitivities on Oscillograph Amplifier panel to OFF and record steady state indication of CHANNELS 2 and 5 per Figure 1. Record maximum width of any pulses at 1/2 positive peak or 1/2 negative peak points on CHANNELS 2 and 5 per Figure 1.

38. Set OPTICS MODE switch to ZERO and CONTROLLER SPEED switch to LO on Indicator Control panel.

39. Set the CHANNEL 2 switch to 12 and the CHANNEL 5 switch to 11 on the Oscillograph Signal Selector panel to monitor:

a. SXT Trun MDA Tach Mon. on CHANNEL 2.

b. SCT Trun MDA Tach Mon. on CHANNEL 5.

40. Set VOLTMETER INPUT to PAVM SIG 2 and CROSSBAR CONTROL to 06 to monitor the CDU Trunnion Fine Error.

41. Set CHANNEL 2 sensitivity to 10 MV/MM and CHANNEL 5 sensitivity to 5 MV/MM on Oscillograph Amplifier panel and set CHART DRIVE switch to MM/SEC.

42. Insure that 20 seconds have elapsed since step 38, then set OPTICS MODE switch on the Indicator Control panel to MAN.

43. Measure and record the voltage indicated on the PAVM while holding the Optics Hand Controller to the lower limit until the SXT is against the Trunnion stop as indicated by a nominal (unchanging) value on Row 2 of the DSKY. Set CHART DRIVE switch to OFF and continue holding the Optics Hand Controller to lower limit.

44. Set the VOLTMETER INPUT switch to PAVM SIG 1 and the CROSSBAR CONTROL to 06. Measure and record the SXT TRUN MDA P/A voltage indicated on the PAVM. Release the Optics Hand Controller.

45. Set all sensitivities on Oscillograph Amplifier panel to OFF and record steady state indication of CHANNELS 2 and 5 per Figure 1. Record maximum width of any pulses at 1/2 positive peak or 1/2 negative peak points on CHANNELS 2 and 5 per Figure 1.

DATE 30 JUN 66

46. Set VOLTMETER INPUT to PAVM SIG 1 and CROSSBAR CONTROL to 05 to monitor the SCT Trunnion MDA Tach Mon.

47. Set CHANNEL 2 sensitivity to 10 MV/MM and CHANNEL 5 sensitivity to 5 MV/MM on Oscillograph Amplifier panel and set CHART DRIVE switch to MM/SEC.

48. Measure and record the voltage indicated on the PAVM while holding the Optics Hand Controller to the upper limit until the SXT is against the Trunnion stop as indicated by a nominal (unchanging) value on the Trunnion TPAC. Release the Optics Hand Controller.

49. Set all sensitivities on Oscillograph Amplifier panel to OFF and record steady state indication of CHANNELS 2 and 5 per Figure 1. Record maximum width of any pulses at 1/2 positive peak or 1/2 negative peak points on CHANNELS 2 and 5 per Figure 1.

50. Set the OPTICS MODE switch on the Indicator Control panel to ZERO.

51. Set the CHANNEL 1 switch on the Oscillograph Signal Selector panel to 12 and monitor SXT Shaft MDA Tach Mon signal on CHANNEL 1.

52. Set VOLTMETER INPUT to PAVM SIG 2 and CROSSBAR CONTROL to 05 to monitor the CDU Shaft Fine Error.

53. Set CHANNEL 1 sensitivity on the Oscillograph Amplifier panel to 10 MV/MM and set CHART DRIVE to MM/SEC.

54. Insure that 20 seconds have elapsed since step 50, then set the OPTICS MODE switch on the Indicator Control panel to MAN.

55. Measure and record voltage indicated on PAVM while holding Optics Hand Controller to right limit until SXT is against Shaft stop as indicated by a nominal (unchanging) value of +270° on the Shaft TPAC. Set CHART DRIVE switch to OFF and continue holding the Optics Hand Controller to right limit.

56. Set the VOLTMETER INPUT switch to PAVM SIG 2 and the CROSSBAR CONTROL to 03. Measure and record the SXT Shaft MDA P/A voltage on the PAVM. Release the Optics Hand Controller.

57. Set all sensitivities on Oscillograph Amplifier panel to OFF and record steady state indication of CHANNEL 1 per Figure 1. Record maximum width of any pulses at 1/2 positive peak or 1/2 negative peak points of CHANNEL 1 per Figure 1.

58. Set the CHANNEL 1 switch on the Oscillograph Signal Selector panel to 13 to monitor the SCT Shaft MDA Tach Mon. on CHANNEL 1 of the Oscillograph.

59. Set the CHANNEL 1 sensitivity control on the Oscillograph Amplifier panel to 5

MV/MM and set the CHART DRIVE switch on the Oscillograph Control panel to MM/SEC.

60. Hold Optics Hand Controller to left limit until SXT is against Shaft stop as indicated by a nominal (unchanging) value of approximately +90° on the Shaft TPAC. Release Optics Hand Controller and set the CHART DRIVE switch to OFF.

61. Set the CHANNEL 1 sensitivity control on the Oscillograph Amplifier panel to OFF and record the maximum steady state indication on CHANNEL 1. Record maximum width of any pulses at 1/2 positive peak or 1/2 negative peak points of CHANNEL 1 per Figure 1.

62. Set the OPTICS MODE switch on the Indicator Control panel to ZERO.

63. Set the CROSSBAR CONTROL to the following positions and measure the quadrature voltage indicated on the PAVM after a minimum of 20 seconds have elapsed since initiating step 62. Insure that the TELESCOPE TRUNNION switch is in the SLAVE to SXT position.

Signal	CROSSBAR CONTROL
a. SCT Trun MDA P/A Mon.	103
b. SXT Shaft MDA P/A Mon.	203
c. SXT Trun MDA P/A Mon.	106
d. SCT Shaft MDA P/A Mon.	210

64. Press OPTICS POWER ON pushbutton on Test Control panel and OPTICS POWER ON pushbutton shall go out.

IMPORTANT

INTERVAL

TOOLS AND MATERIAL

NOTE: Oscillograph Amplifier sensitivities stated herein are nominal and may be adjusted at the discretion of the operator.

INITIALIZATION

1. Perform JDC 12215 to establish a Master Initialization condition. Press OPTICS POWER ON pushbutton on Test Control panel so that OPTICS POWER ON pushbutton shall light.

2. Insure that the TELESCOPE TRUNNION switch on the Indicator Control panel is set to SLAVE TO SXT and the TRACKER switch is set to OFF.

3. Insure that CH4 AC, CH5 AC, CH6 AC, 800~ 0 PH REFERENCE and OPT 800~ PH GEN pushbuttons on Oscillograph Signal Selector panel are lighted and SCT TRUN, SXT SHAFT and SXT TRUN switches on PSA Test Point Adapter are set to 1:1.

HIGH SPEED SLEW RATE

4. Set the CHANNEL 2 switch on the Oscillograph Signal Selector panel to 12 and CHANNEL 5 switch to 11, and monitor the following signals:

a. SXT Trunnion MDA Tach Mon. on CHANNEL 2.

b. SCT Trunnion MDA Tach Mon. on CHANNEL 5.

5. Deleted

VERIFICATION WITH SIDL REQUIRED BEFORE USE

DATE 30 JUN 66

JOB OPTICS SLEW RATE TEST | JDC 12213 REV F PAGE 2 OF 6

SUBSYSTEM G AND N SYSTEM | ASSY

6. Set the OPTICS MODE switch on the Indicator Control panel to ZERO.

7. Press CHART SPEEDS 5 pushbutton on the Oscillograph Control panel and set CHANNEL 2 sensitivity on the Oscillograph Amplifier panel to 500 MV/MM and CHANNEL 5 sensitivity to 200 mv/mm.

8. Set SCOPE "A" INPUT to SIG 2 and CROSSBAR CONTROL to 14 on Primary Signal Selector panel to monitor SXT Trunnion MDA Output Mon. on Oscilloscope.

9. Set CONTROLLER COUPLING switch to DIRECT, CONTROLLER SPEED to HI, and after approximately 20 seconds set OPTICS MODE switch to MAN on Indicator Control panel.

10. Start Oscillograph by setting CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

11. Measure and record the steady state peak to peak voltage indicated on the Oscilloscope while holding the Optics Hand Controller to the upper limit not longer than 10 seconds. Release the Optics Hand Controller and set CHART DRIVE switch to OFF. Set all sensitivities on Oscillograph Amplifier panel to OFF and record maximum steady state indications of CHANNELS 2 and 5.

12. Set OPTICS MODE switch to ZERO.

13. Set CHANNEL 1 on the Oscillograph Signal Selector panel to 13 and monitor SCT Shaft MDA Tach Mon. signal on CHANNEL 1.

14. Set CHANNEL 1 sensitivity on Oscillograph Amplifier panel to 500 mv/mm.

15. Set SCOPE "A" INPUT to SIG 1 and CROSSBAR CONTROL to 14 on Primary Signal Selector panel to monitor SXT Shaft MDA Output Mon. on Oscilloscope.

16. Insure that 20 seconds have elapsed since step 12 and set the OPTICS MODE switch to MANUAL on the Indicator Control panel. Start the Oscillograph by setting CHART DRIVE switch on the Oscillograph Control panel to MM/SEC.

17. Measure and record the steady state peak to peak voltage indicated on the Oscilloscope while holding the Optics Hand Controller to the right limit not longer than 10 seconds. Release the Optics Hand Controller and set CHART DRIVE switch to OFF. Set all sensitivities on Oscillograph Amplifier panel to OFF and record the maximum steady state indications of CHANNEL 1.

18. Set the CHANNEL 1 switch on the Oscillograph Signal Selector panel to 12 to monitor the SXT Shaft MDA Tach Mon. voltage on CHANNEL 1.

DATE 30 JUN 66

JOB OPTICS SLEW RATE TEST | JDC 12213 REV F PAGE 3 OF 6

SUBSYSTEM G AND N SYSTEM | ASSY

19. Set CHANNEL 1 sensitivity to 500 mv/mm on the Oscillograph Amplifier panel.

20. Start the Oscillograph by setting the CHART DRIVE switch on the Oscillograph Control panel to MM/SEC.

21. Hold the Optics Hand Controller to the left limit not longer than 10 seconds. Release the Optics Hand Controller and set OPTICS MODE switch to ZERO.

22. Stop Oscillograph and record maximum steady state indication on CHANNEL 1.

MEDIUM SPEED SLEW RATE

23. Set VOLTMETER INPUT to PAVM SIG 1 and CROSSBAR CONTROL to 05. Set PAVM FUNCTION selector to 0° to monitor in phase voltage of the SCT Trunnion MDA TACH Mon.

24. Set the CONTROLLER SPEED to MED and insuring that 20 seconds have elapsed since step 21, set the OPTICS MODE switch to MAN on the Indicator Control panel.

25. Measure and record the voltage indicated on the PAVM while holding the Optics Hand Controller to the upper limit not longer than 20 seconds. Release the Optics hand controller.

26. Set CHANNEL 5 switch to 11 on Oscillograph Signal Selector panel to monitor the SCT Trunnion MDA TACH Mon.

27. Set VOLTMETER INPUT to PAVM SIG 2 and CROSSBAR CONTROL to 08 to monitor the SXT Trunnion MDA TACH Mon.

28. Set CHANNEL 5 sensitivity to 10 MV/MM on Oscillograph Amplifier panel. Press CHART SPEEDS 20 pushbutton on the Oscillograph Control Panel and set CHART DRIVE switch to MM/SEC.

29. Measure and record the voltage indicated on the PAVM while holding the Optics Hand Controller to the lower limit not longer than 20 seconds. Release the Optics Hand Controller and set CHART DRIVE switch to OFF. Set all sensitivities on Oscillograph Amplifier panel to OFF and record steady state indication of CHANNEL 5 per Figure 1. Record maximum width of any pulses at 1/2 positive peak or 1/2 negative peak points on CHANNEL 5 per Figure 1. If no pulses occur, write none on the data sheet.

30. Set the OPTICS MODE switch on the Indicator Control panel to ZERO.

31. Set VOLTMETER INPUT to PAVM SIG 2 and CROSSBAR CONTROL to 04 to monitor the SCT Shaft MDA TACH Mon.

32. Insure that 20 seconds have elapsed since step 30. Set OPTICS MODE switch on Indicator Control panel to MAN.

33. Measure and record the voltage indicated on the PAVM while holding the Optics Hand Controller to the right limit not longer than 20 seconds. Release the Optics Hand Controller.

DATE 30 JUN 66

JOB OPTICS SLEW RATE TEST | JDC 12213 REV F PAGE 4 OF 6

SUBSYSTEM G AND N SYSTEM | ASSY

34. Set CHANNEL 1 switch to 13 on Oscillograph Signal Selector panel to monitor the SCT Shaft MDA TACH Mon.

35. Set VOLTMETER INPUT to PAVM SIG 2 and CROSSBAR CONTROL to 07 to monitor the SXT Shaft MDA Tach Mon.

36. Set CHANNEL 1 sensitivity to 20 MV/MM on Oscillograph Amplifier panel and set CHART DRIVE switch to MM/SEC.

37. Measure and record the voltage indicated on the PAVM while holding the Optics Hand Controller to the left limit not longer than 20 seconds. Release the Optics Hand Controller and set CHART DRIVE switch to OFF. Set all sensitivities on Oscillograph Amplifier panel to OFF and record steady state indication of CHANNEL 1 per Figure 1. Record maximum width of any pulses at 1/2 positive peak or 1/2 negative peak points on CHANNEL 1 per Figure 1. If no pulses occur, write none on the data sheet.

LOW SPEED SLEW RATE

38. Set OPTICS MODE switch to ZERO and CONTROLLER SPEED switch to LO on Indicator Control panel.

39. Set the CHANNEL 2 switch to 12 and the CHANNEL 5 switch to 11 on the Oscillograph Signal Selector panel to monitor:

a. SXT Trun MDA Tach Mon. on CHANNEL 2.

b. SCT Trun MDA Tach Mon. on CHANNEL 5.

40. Set VOLTMETER INPUT to PAVM SIG 2 and CROSSBAR CONTROL to 06 to monitor the CDU Trunnion Fine Error.

41. Set CHANNEL 2 sensitivity to 10 MV/MM and CHANNEL 5 sensitivity to 5 MV/MM on Oscillograph Amplifier panel and set CHART DRIVE switch to MM/SEC.

42. Insure that 20 seconds have elapsed since step 38, then set OPTICS MODE switch on the Indicator Control panel to MAN.

43. Measure and record the voltage indicated on the PAVM while holding the Optics Hand Controller to the lower limit until the SXT is against the Trunnion stop as indicated by a nominal (unchanging) value on Row 2 of the DSKY. Set CHART DRIVE switch to OFF and continue holding the Optics Hand Controller to lower limit.

44. Set the VOLTMETER INPUT switch to PAVM SIG 1 and the CROSSBAR CONTROL to 06. Measure and record the SXT TRUN MDA P/A voltage indicated on the PAVM. Release the Optics Hand Controller.

45. Set all sensitivities on Oscillograph Amplifier panel to OFF and record steady state indication of CHANNELS 2 and 5 per Figure 1. Record maximum width of any pulses at 1/2 positive peak or 1/2 negative peak points on CHANNELS 2 and 5 per Figure 1.

DATE 30 JUN 66

46. Set VOLTMETER INPUT to PAVM SIG 1 and CROSSBAR CONTROL to 05 to monitor the SCT Trunnion MDA Tach Mon.

47. Set CHANNEL 2 sensitivity to 10 MV/MM and CHANNEL 5 sensitivity to 5 MV/MM on Oscillograph Amplifier panel and set CHART DRIVE switch to MM/SEC.

48. Measure and record the voltage indicated on the PAVM while holding the Optics Hand Controller to the upper limit until the SXT is against the Trunnion stop as indicated by a nominal (unchanging) value on the Trunnion TPAC. Release the Optics Hand Controller.

49. Set all sensitivities on Oscillograph Amplifier panel to OFF and record steady state indication of CHANNELS 2 and 5 per Figure 1. Record maximum width of any pulses at 1/2 positive peak or 1/2 negative peak points on CHANNELS 2 and 5 per Figure 1.

50. Set the OPTICS MODE switch on the Indicator Control panel to ZERO.

51. Set the CHANNEL 1 switch on the Oscillograph Signal Selector panel to 12 and monitor SXT Shaft MDA Tach Mon signal on CHANNEL 1.

52. Set VOLTMETER INPUT to PAVM SIG 2 and CROSSBAR CONTROL to 06 to monitor the CDU Shaft Fine Error.

53. Set CHANNEL 1 sensitivity on the Oscillograph Amplifier panel to 10 MV/MM and set CHART DRIVE to MM/SEC.

54. Insure that 20 seconds have elapsed since step 50, then set the OPTICS MODE switch on the Indicator Control panel to MAN.

55. Measure and record voltage indicated on PAVM while holding Optics Hand Controller to right limit until SXT is against Shaft stop as indicated by a nominal (unchanging) value of +270° on the Shaft TPAC. Set CHART DRIVE switch to OFF and continue holding the Optics Hand Controller to right limit.

56. Set the VOLTMETER INPUT switch to PAVM SIG 2 and the CROSSBAR CONTROL to 03. Measure and record the SXT Shaft MDA P/A voltage on the PAVM. Release the Optics Hand Controller.

57. Set all sensitivities on Oscillograph Amplifier panel to OFF and record steady state indication of CHANNEL 1 per Figure 1. Record maximum width of any pulses at 1/2 positive peak or 1/2 negative peak points of CHANNEL 1 per Figure 1.

58. Set the CHANNEL 1 switch on the Oscillograph Signal Selector panel to 13 to monitor the SCT Shaft MDA Tach Mon. on CHANNEL 1 of the Oscillograph.

59. Set the CHANNEL 1 sensitivity control on the Oscillograph Amplifier panel to 5

MV/MM and set the CHART DRIVE switch on the Oscillograph Control panel to MM/SEC.

60. Hold Optics Hand Controller to left limit until SXT is against Shaft stop as indicated by a nominal (unchanging) value of approximately +90° on the Shaft TPAC. Release Optics Hand Controller and set the CHART DRIVE switch to OFF.

61. Set the CHANNEL 1 sensitivity control on the Oscillograph Amplifier panel to OFF and record the maximum steady state indication on CHANNEL 1. Record maximum width of any pulses at 1/2 positive peak or 1/2 negative peak points of CHANNEL 1 per Figure 1.

62. Set the OPTICS MODE switch on the Indicator Control panel to ZERO.

63. Set the CROSSBAR CONTROL to the following positions and measure the quadrature voltage indicated on the PAVM after a minimum of 20 seconds have elapsed since initiating step 62. Insure that the TELESCOPE TRUNNION switch is in the SLAVE to SXT position.

Signal	CROSSBAR CONTROL
a. SCT Trun MDA P/A Mon.	103
b. SXT Shaft MDA P/A Mon.	203
c. SXT Trun MDA P/A Mon.	106
d. SCT Shaft MDA P/A Mon.	210

64. Press OPTICS POWER ON pushbutton on Test Control panel and OPTICS POWER ON pushbutton shall go out.

							TOOLS AND MATERIAL

NOTE: Oscillograph Amplifier sensitivities stated herein are nominal and may be adjusted at the discretion of the operator.

INITIALIZATION

1. Perform JDC 12215 to establish a Master Initialization condition. Press OPTICS POWER ON pushbutton on Test Control panel so that OPTICS POWER ON pushbutton shall light.

2. Insure that the TELESCOPE TRUNNION switch on the Indicator Control panel is set to SLAVE TO SXT and the TRACKER switch is set to OFF.

3. Insure that CH4 AC, CH5 AC, CH6 AC, 800~ 0 PH REFERENCE and OPT 800~ PH GEN pushbuttons on Oscillograph Signal Selector panel are lighted and SCT TRUN, SXT SHAFT and SXT TRUN switches on PSA Test Point Adapter are set to 1:1.

HIGH SPEED SLEW RATE

4. Set the CHANNEL 2 switch on the Oscillograph Signal Selector panel to 12 and CHANNEL 5 switch to 11, and monitor the following signals:

a. SXT Trunnion MDA Tach Mon. on CHANNEL 2.

b. SCT Trunnion MDA Tach Mon. on CHANNEL 5.

5. Deleted

VERIFICATION WITH SIDL REQUIRED BEFORE USE

---

6. Set the OPTICS MODE switch on the Indicator Control panel to ZERO.

7. Press CHART SPEEDS 5 pushbutton on the Oscillograph Control panel and set CHANNEL 2 sensitivity on the Oscillograph Amplifier panel to 500 MV/MM and CHANNEL 5 sensitivity to 200 mv/mm.

8. Set SCOPE "A" INPUT to SIG 2 and CROSSBAR CONTROL to 14 on Primary Signal Selector panel to monitor SXT Trunnion MDA Output Mon. on Oscilloscope.

9. Set CONTROLLER COUPLING switch to DIRECT, CONTROLLER SPEED to HI, and after approximately 20 seconds set OPTICS MODE switch to MAN on Indicator Control panel.

10. Start Oscillograph by setting CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

11. Measure and record the steady state peak to peak voltage indicated on the Oscilloscope while holding the Optics Hand Controller to the upper limit not longer than 10 seconds. Release the Optics Hand Controller and set CHART DRIVE switch to OFF. Set all sensitivities on Oscillograph Amplifier panel to OFF and record maximum steady state indications of CHANNELS 2 and 5.

12. Set OPTICS MODE switch to ZERO.

13. Set CHANNEL 1 on the Oscillograph Signal Selector panel to 13 and monitor SCT Shaft MDA Tach Mon. signal on CHANNEL 1.

14. Set CHANNEL 1 sensitivity on Oscillograph Amplifier panel to 500 mv/mm.

15. Set SCOPE "A" INPUT to SIG 1 and CROSSBAR CONTROL to 14 on Primary Signal Selector panel to monitor SXT Shaft MDA Output Mon. on Oscilloscope.

16. Insure that 20 seconds have elapsed since step 12 and set the OPTICS MODE switch to MANUAL on the Indicator Control panel. Start the Oscillograph by setting CHART DRIVE switch on the Oscillograph Control panel to MM/SEC.

17. Measure and record the steady state peak to peak voltage indicated on the Oscilloscope while holding the Optics Hand Controller to the right limit not longer than 10 seconds. Release the Optics Hand Controller and set CHART DRIVE switch to OFF. Set all sensitivities on Oscillograph Amplifier panel to OFF and record the maximum steady state indications of CHANNEL 1.

18. Set the CHANNEL 1 switch on the Oscillograph Signal Selector panel to 12 to monitor the SXT Shaft MDA Tach Mon. voltage on CHANNEL 1.

---

19. Set CHANNEL 1 sensitivity to 500 mv/mm on the Oscillograph Amplifier panel.

20. Start the Oscillograph by setting the CHART DRIVE switch on the Oscillograph Control panel to MM/SEC.

21. Hold the Optics Hand Controller to the left limit not longer than 10 seconds. Release the Optics Hand Controller and set OPTICS MODE switch to ZERO.

22. Stop Oscillograph and record maximum steady state indication on CHANNEL 1.

MEDIUM SPEED SLEW RATE

23. Set VOLTMETER INPUT to PAVM SIG 1 and CROSSBAR CONTROL to 05. Set PAVM FUNCTION selector to 0° to monitor in phase voltage of the SCT Trunnion MDA TACH Mon.

24. Set the CONTROLLER SPEED to MED and insuring that 20 seconds have elapsed since step 21, set the OPTICS MODE switch to MAN on the Indicator Control panel.

25. Measure and record the voltage indicated on the PAVM while holding the Optics Hand Controller to the upper limit not longer than 20 seconds. Release the Optics hand controller.

26. Set CHANNEL 5 switch to 11 on Oscillograph Signal Selector panel to monitor the SCT Trunnion MDA TACH Mon.

27. Set VOLTMETER INPUT to PAVM SIG 2 and CROSSBAR CONTROL to 09 to monitor the SXT Trunnion MDA TACH Mon.

28. Set CHANNEL 5 sensitivity to 10 MV/MM on Oscillograph Amplifier panel. Press CHART SPEEDS 20 pushbutton on the Oscillograph Control Panel and set CHART DRIVE switch to MM/SEC.

29. Measure and record the voltage indicated on the PAVM while holding the Optics Hand Controller to the lower limit not longer than 20 seconds. Release the Optics Hand Controller and set CHART DRIVE switch to OFF. Set all sensitivities on Oscillograph Amplifier panel to OFF and record steady state indication of CHANNEL 5 per Figure 1. Record maximum width of any pulses at 1/2 positive peak or 1/2 negative peak points on CHANNEL 5 per Figure 1. If no pulses occur, write none on the data sheet.

30. Set the OPTICS MODE switch on the Indicator Control panel to ZERO.

31. Set VOLTMETER INPUT to PAVM SIG 2 and CROSSBAR CONTROL to 04 to monitor the SCT Shaft MDA TACH Mon.

32. Insure that 20 seconds have elapsed since step 30. Set OPTICS MODE switch on Indicator Control panel to MAN.

33. Measure and record the voltage indicated on the PAVM while holding the Optics Hand Controller to the right limit not longer than 20 seconds. Release the Optics Hand Controller.

---

34. Set CHANNEL 1 switch to 13 on Oscillograph Signal Selector panel to monitor the SCT Shaft MDA TACH Mon.

35. Set VOLTMETER INPUT to PAVM SIG 2 and CROSSBAR CONTROL to 07 to monitor the SXT Shaft MDA Tach Mon.

36. Set CHANNEL 1 sensitivity to 20 MV/MM on Oscillograph Amplifier panel and set CHART DRIVE switch to MM/SEC.

37. Measure and record the voltage indicated on the PAVM while holding the Optics Hand Controller to the left limit not longer than 20 seconds. Release the Optics Hand Controller and set CHART DRIVE switch to OFF. Set all sensitivities on Oscillograph Amplifier panel to OFF and record steady state indication of CHANNEL 1 per Figure 1. Record maximum width of any pulses at 1/2 positive peak or 1/2 negative peak points on CHANNEL 1 per Figure 1. If no pulses occur, write none on the data sheet.

LOW SPEED SLEW RATE

38. Set OPTICS MODE switch to ZERO and CONTROLLER SPEED switch to LO on Indicator Control panel.

39. Set the CHANNEL 2 switch to 12 and the CHANNEL 5 switch to 11 on the Oscillograph Signal Selector panel to monitor:

a. SXT Trun MDA Tach Mon. on CHANNEL 2.

b. SCT Trun MDA Tach Mon. on CHANNEL 5.

40. Set VOLTMETER INPUT to PAVM SIG 2 and CROSSBAR CONTROL to 06 to monitor the CDU Trunnion Fine Error.

41. Set CHANNEL 2 sensitivity to 10 MV/MM and CHANNEL 5 sensitivity to 5 MV/MM on Oscillograph Amplifier panel and set CHART DRIVE switch to MM/SEC.

42. Insure that 20 seconds have elapsed since step 38, then set OPTICS MODE switch on the Indicator Control panel to MAN.

43. Measure and record the voltage indicated on the PAVM while holding the Optics Hand Controller to the lower limit until the SXT is against the Trunnion stop as indicated by a nominal (unchanging) value on Row 2 of the DSKY. Set CHART DRIVE switch to OFF and continue holding the Optics Hand Controller to lower limit.

44. Set the VOLTMETER INPUT switch to PAVM SIG 1 and the CROSSBAR CONTROL to 06. Measure and record the SXT TRUN MDA P/A voltage indicated on the PAVM. Release the Optics Hand Controller.

45. Set all sensitivities on Oscillograph Amplifier panel to OFF and record steady state indication of CHANNELS 2 and 5 per Figure 1. Record maximum width of any pulses at 1/2 positive peak or 1/2 negative peak points on CHANNELS 2 and 5 per Figure 1.

46. Set VOLTMETER INPUT to PAVM SIG 1 and CROSSBAR CONTROL to 05 to monitor the SCT Trunnion MDA Tach Mon.

47. Set CHANNEL 2 sensitivity to 10 MV/MM and CHANNEL 5 sensitivity to 5 MV/MM on Oscillograph Amplifier panel and set CHART DRIVE switch to MM/SEC.

48. Measure and record the voltage indicated on the PAVM while holding the Optics Hand Controller to the upper limit until the SXT is against the Trunnion stop as indicated by a nominal (unchanging) value on the Trunnion TPAC. Release the Optics Hand Controller.

49. Set all sensitivities on Oscillograph Amplifier panel to OFF and record steady state indication of CHANNELS 2 and 5 per Figure 1. Record maximum width of any pulses at 1/2 positive peak or 1/2 negative peak points on CHANNELS 2 and 5 per Figure 1.

50. Set the OPTICS MODE switch on the Indicator Control panel to ZERO.

51. Set the CHANNEL 1 switch on the Oscillograph Signal Selector panel to 12 and monitor SXT Shaft MDA Tach Mon signal on CHANNEL 1.

52. Set VOLTMETER INPUT to PAVM SIG 2 and CROSSBAR CONTROL to 05 to monitor the CDU Shaft Fine Error.

53. Set CHANNEL 1 sensitivity on the Oscillograph Amplifier panel to 10 MV/MM and set CHART DRIVE to MM/SEC.

54. Insure that 20 seconds have elapsed since step 50, then set the OPTICS MODE switch on the Indicator Control panel to MAN.

55. Measure and record voltage indicated on PAVM while holding Optics Hand Controller to right limit until SXT is against Shaft stop as indicated by a nominal (unchanging) value of +270° on the Shaft TPAC. Set CHART DRIVE switch to OFF and continue holding the Optics Hand Controller to right limit.

56. Set the VOLTMETER INPUT switch to PAVM SIG 2 and the CROSSBAR CONTROL to 03. Measure and record the SXT Shaft MDA P/A voltage on the PAVM. Release the Optics Hand Controller.

57. Set all sensitivities on Oscillograph Amplifier panel to OFF and record steady state indication of CHANNEL 1 per Figure 1. Record maximum width of any pulses at 1/2 positive peak or 1/2 negative peak points of CHANNEL 1 per Figure 1.

58. Set the CHANNEL 1 switch on the Oscillograph Signal Selector panel to 13 to monitor the SCT Shaft MDA Tach Mon. on CHANNEL 1 of the Oscillograph.

59. Set the CHANNEL 1 sensitivity control on the Oscillograph Amplifier panel to 5

MV/MM and set the CHART DRIVE switch on the Oscillograph Control panel to MM/SEC.

60. Hold Optics Hand Controller to left limit until SXT is against Shaft stop as indicated by a nominal (unchanging) value of approximately +90° on the Shaft TPAC. Release Optics Hand Controller and set the CHART DRIVE switch to OFF.

61. Set the CHANNEL 1 sensitivity control on the Oscillograph Amplifier panel to OFF and record the maximum steady state indication on CHANNEL 1. Record maximum width of any pulses at 1/2 positive peak or 1/2 negative peak points of CHANNEL 1 per Figure 1.

62. Set the OPTICS MODE switch on the Indicator Control panel to ZERO.

63. Set the CROSSBAR CONTROL to the following positions and measure the quadrature voltage indicated on the PAVM after a minimum of 20 seconds have elapsed since initiating step 62. Insure that the TELESCOPE TRUNNION switch is in the SLAVE to SXT position.

	Signal	CROSSBAR CONTROL
a.	SCT Trun MDA P/A Mon.	103
b.	SXT Shaft MDA P/A Mon.	203
c.	SXT Trun MDA P/A Mon.	106
d.	SCT Shaft MDA P/A Mon.	210

64. Press OPTICS POWER ON pushbutton on Test Control panel and OPTICS POWER ON pushbutton shall go out.

IMPORTANT

INTERVAL

TOOLS AND MATERIAL

NOTE: Oscillograph Amplifier sensitivities stated herein are nominal and may be adjusted at the discretion of the operator.

INITIALIZATION

1. Perform JDC 12215 to establish a Master Initialization condition. Press OPTICS POWER ON pushbutton on Test Control panel so that OPTICS POWER ON pushbutton shall light.

2. Insure that the TELESCOPE TRUNNION switch on the Indicator Control panel is set to SLAVE TO SXT and the TRACKER switch is set to OFF.

3. Insure that CH4 AC, CH5 AC, CH6 AC, 800~ 0 PH REFERENCE and OPT 800~ PH GEN pushbuttons on Oscillograph Signal Selector panel are lighted and SCT TRUN, SXT SHAFT and SXT TRUN switches on PSA Test Point Adapter are set to 1:1.

HIGH SPEED SLEW RATE

4. Set the CHANNEL 2 switch on the Oscillograph Signal Selector panel to 12 and CHANNEL 5 switch to 11, and monitor the following signals:

a. SXT Trunnion MDA Tach Mon. on CHANNEL 2.

b. SCT Trunnion MDA Tach Mon. on CHANNEL 5.

5. Deleted

VERIFICATION WITH SIDL REQUIRED BEFORE USE

6. Set the OPTICS MODE switch on the Indicator Control panel to ZERO.

7. Press CHART SPEEDS 5 pushbutton on the Oscillograph Control panel and set CHANNEL 2 sensitivity on the Oscillograph Amplifier panel to 500 MV/MM and CHANNEL 5 sensitivity to 200 mv/mm.

8. Set SCOPE "A" INPUT to SIG 2 and CROSSBAR CONTROL to 14 on Primary Signal Selector panel to monitor SXT Trunnion MDA Output Mon. on Oscilloscope.

9. Set CONTROLLER COUPLING switch to DIRECT, CONTROLLER SPEED to HI, and after approximately 20 seconds set OPTICS MODE switch to MAN on Indicator Control panel.

10. Start Oscillograph by setting CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

11. Measure and record the steady state peak to peak voltage indicated on the Oscilloscope while holding the Optics Hand Controller to the upper limit not longer than 10 seconds. Release the Optics Hand Controller and set CHART DRIVE switch to OFF. Set all sensitivities on Oscillograph Amplifier panel to OFF and record maximum steady state indications of CHANNELS 2 and 5.

12. Set OPTICS MODE switch to ZERO.

13. Set CHANNEL 1 on the Oscillograph Signal Selector panel to 13 and monitor SCT Shaft MDA Tach Mon. signal on CHANNEL 1.

14. Set CHANNEL 1 sensitivity on Oscillograph Amplifier panel to 500 mv/mm.

15. Set SCOPE "A" INPUT to SIG 1 and CROSSBAR CONTROL to 14 on Primary Signal Selector panel to monitor SXT Shaft MDA Output Mon. on Oscilloscope.

16. Insure that 20 seconds have elapsed since step 12 and set the OPTICS MODE switch to MANUAL on the Indicator Control panel. Start the Oscillograph by setting CHART DRIVE switch on the Oscillograph Control panel to MM/SEC.

17. Measure and record the steady state peak to peak voltage indicated on the Oscilloscope while holding the Optics Hand Controller to the right limit not longer than 10 seconds. Release the Optics Hand Controller and set CHART DRIVE switch to OFF. Set all sensitivities on Oscillograph Amplifier panel to OFF and record the maximum steady state indications of CHANNEL 1.

18. Set the CHANNEL 1 switch on the Oscillograph Signal Selector panel to 12 to monitor the SXT Shaft MDA Tach Mon. voltage on CHANNEL 1.

19. Set CHANNEL 1 sensitivity to 500 mv/mm on the Oscillograph Amplifier panel.

20. Start the Oscillograph by setting the CHART DRIVE switch on the Oscillograph Control panel to MM/SEC.

21. Hold the Optics Hand Controller to the left limit not longer than 10 seconds. Release the Optics Hand Controller and set OPTICS MODE switch to ZERO.

22. Stop Oscillograph and record maximum steady state indication on CHANNEL 1.

MEDIUM SPEED SLEW RATE

23. Set VOLTMETER INPUT to PAVM SIG 1 and CROSSBAR CONTROL to 05. Set PAVM FUNCTION selector to 0° to monitor in phase voltage of the SCT Trunnion MDA TACH Mon.

24. Set the CONTROLLER SPEED to MED and insuring that 20 seconds have elapsed since step 21, set the OPTICS MODE switch to MAN on the Indicator Control panel.

25. Measure and record the voltage indicated on the PAVM while holding the Optics Hand Controller to the upper limit not longer than 20 seconds. Release the Optics hand controller.

26. Set CHANNEL 5 switch to 11 on Oscillograph Signal Selector panel to monitor the SCT Trunnion MDA TACH Mon.

27. Set VOLTMETER INPUT to PAVM SIG 2 and CROSSBAR CONTROL to 09 to monitor the SXT Trunnion MDA TACH Mon.

28. Set CHANNEL 5 sensitivity to 10 MV/MM on Oscillograph Amplifier panel. Press CHART SPEEDS 20 pushbutton on the Oscillograph Control Panel and set CHART DRIVE switch to MM/SEC.

29. Measure and record the voltage indicated on the PAVM while holding the Optics Hand Controller to the lower limit not longer than 20 seconds. Release the Optics Hand Controller and set CHART DRIVE switch to OFF. Set all sensitivities on Oscillograph Amplifier panel to OFF and record steady state indication of CHANNEL 5 per Figure 1. Record maximum width of any pulses at 1/2 positive peak or 1/2 negative peak points on CHANNEL 5 per Figure 1. If no pulses occur, write none on the data sheet.

30. Set the OPTICS MODE switch on the Indicator Control panel to ZERO.

31. Set VOLTMETER INPUT to PAVM SIG 2 and CROSSBAR CONTROL to 04 to monitor the SCT Shaft MDA TACH Mon.

32. Insure that 20 seconds have elapsed since step 30. Set OPTICS MODE switch on Indicator Control panel to MAN.

33. Measure and record the voltage indicated on the PAVM while holding the Optics Hand Controller to the right limit not longer than 20 seconds. Release the Optics Hand Controller.

34. Set CHANNEL 1 switch to 13 on Oscillograph Signal Selector panel to monitor the SCT Shaft MDA TACH Mon.

35. Set VOLTMETER INPUT to PAVM SIG 2 and CROSSBAR CONTROL to 07 to monitor the SXT Shaft MDA Tach Mon.

36. Set CHANNEL 1 sensitivity to 20 MV/MM on Oscillograph Amplifier panel and set CHART DRIVE switch to MM/SEC.

37. Measure and record the voltage indicated on the PAVM while holding the Optics Hand Controller to the left limit not longer than 20 seconds. Release the Optics Hand Controller and set CHART DRIVE switch to OFF. Set all sensitivities on Oscillograph Amplifier panel to OFF and record steady state indication of CHANNEL 1 per Figure 1. Record maximum width of any pulses at 1/2 positive peak or 1/2 negative peak points on CHANNEL 1 per Figure 1. If no pulses occur, write none on the data sheet.

LOW SPEED SLEW RATE

38. Set OPTICS MODE switch to ZERO and CONTROLLER SPEED switch to LO on Indicator Control panel.

39. Set the CHANNEL 2 switch to 12 and the CHANNEL 5 switch to 11 on the Oscillograph Signal Selector panel to monitor:

a. SXT Trun MDA Tach Mon. on CHANNEL 2.

b. SCT Trun MDA Tach Mon. on CHANNEL 5.

40. Set VOLTMETER INPUT to PAVM SIG 2 and CROSSBAR CONTROL to 06 to monitor the CDU Trunnion Fine Error.

41. Set CHANNEL 2 sensitivity to 10 MV/MM and CHANNEL 5 sensitivity to 5 MV/MM on Oscillograph Amplifier panel and set CHART DRIVE switch to MM/SEC.

42. Insure that 20 seconds have elapsed since step 38, then set OPTICS MODE switch on the Indicator Control panel to MAN.

43. Measure and record the voltage indicated on the PAVM while holding the Optics Hand Controller to the lower limit until the SXT is against the Trunnion stop as indicated by a nominal (unchanging) value on the Trunnion TPAC. Set CHART DRIVE switch to OFF and continue holding the Optics Hand Controller to lower limit.

44. Set the VOLTMETER INPUT switch to PAVM SIG 1 and the CROSSBAR CONTROL to 06. Measure and record the SXT TRUN MDA P/A voltage indicated on the PAVM. Release the Optics Hand Controller.

45. Set all sensitivities on Oscillograph Amplifier panel to OFF and record steady state indication of CHANNELS 2 and 5 per Figure 1. Record maximum width of any pulses at 1/2 positive peak or 1/2 negative peak points on CHANNELS 2 and 5 per Figure 1.

46. Set VOLTMETER INPUT to PAVM SIG 1 and CROSSBAR CONTROL to 05 to monitor the SCT Trunnion MDA Tach Mon.

47. Set CHANNEL 2 sensitivity to 10 MV/MM and CHANNEL 5 sensitivity to 5 MV/MM on Oscillograph Amplifier panel and set CHART DRIVE switch to MM/SEC.

48. Measure and record the voltage indicated on the PAVM while holding the Optics Hand Controller to the upper limit until the SXT is against the Trunnion stop as indicated by a nominal (unchanging) value on the Trunnion TPAC. Release the Optics Hand Controller.

49. Set all sensitivities on Oscillograph Amplifier panel to OFF and record steady state indication of CHANNELS 2 and 5 per Figure 1. Record maximum width of any pulses at 1/2 positive peak or 1/2 negative peak points on CHANNELS 2 and 5 per Figure 1.

50. Set the OPTICS MODE switch on the Indicator Control panel to ZERO.

51. Set the CHANNEL 1 switch on the Oscillograph Signal Selector panel to 12 and monitor SXT Shaft MDA Tach Mon signal on CHANNEL 1.

52. Set VOLTMETER INPUT to PAVM SIG 2 and CROSSBAR CONTROL to 05 to monitor the CDU Shaft Fine Error.

53. Set CHANNEL 1 sensitivity on the Oscillograph Amplifier panel to 10 MV/MM and set CHART DRIVE to MM/SEC.

54. Insure that 20 seconds have elapsed since step 50, then set the OPTICS MODE switch on the Indicator Control panel to MAN.

55. Measure and record voltage indicated on PAVM while holding Optics Hand Controller to right limit until SXT is against Shaft stop as indicated by a nominal (unchanging) value of +270° on the Shaft TPAC. Set CHART DRIVE switch to OFF and continue holding the Optics Hand Controller to right limit.

56. Set the VOLTMETER INPUT switch to PAVM SIG 2 and the CROSSBAR CONTROL to 03. Measure and record the SXT Shaft MDA P/A voltage on the PAVM. Release the Optics Hand Controller.

57. Set all sensitivities on Oscillograph Amplifier panel to OFF and record steady state indication of CHANNEL 1 per Figure 1. Record maximum width of any pulses at 1/2 positive peak or 1/2 negative peak points of CHANNEL 1 per Figure 1.

58. Set the CHANNEL 1 switch on the Oscillograph Signal Selector panel to 13 to monitor the SCT Shaft MDA Tach Mon. on CHANNEL 1 of the Oscillograph.

59. Set the CHANNEL 1 sensitivity control on the Oscillograph Amplifier panel to 5 MV/MM and set the CHART DRIVE switch on the Oscillograph Control panel to MM/SEC.

60. Hold Optics Hand Controller to left limit until SXT is against Shaft stop as indicated by a nominal (unchanging) value of approximately +90° on the Shaft TPAC. Release Optics Hand Controller and set the CHART DRIVE switch to OFF.

61. Set the CHANNEL 1 sensitivity control on the Oscillograph Amplifier panel to OFF and record the maximum steady state indication on CHANNEL 1. Record maximum width of any pulses at 1/2 positive peak or 1/2 negative peak points of CHANNEL 1 per Figure 1.

62. Set the OPTICS MODE switch on the Indicator Control panel to ZERO.

63. Set the CROSSBAR CONTROL to the following positions and measure the quadrature voltage indicated on the PAVM after a minimum of 20 seconds have elapsed since initiating step 62. Insure that the TELESCOPE TRUNNION switch is in the SLAVE to SXT position.

Signal	CROSSBAR CONTROL
a. SCT Trun MDA P/A Mon.	103
b. SXT Shaft MDA P/A Mon.	203
c. SXT Trun MDA P/A Mon.	106
d. SCT Shaft MDA P/A Mon.	210

64. Press OPTICS POWER ON pushbutton on Test Control panel and OPTICS POWER ON pushbutton shall go out.

REFERENCES

PS-2015000

IMPORTANT Avoid repeated slewing of SXT shaft and trunnion axes into their mechanical stops.

INTERVAL

TOOLS AND MATERIAL

NOTE: Oscillograph Amplifier sensitivities stated herein are nominal and may be adjusted at the discretion of the operator.

INITIALIZATION

1. Perform JDC 12215 to establish a Master Initialization condition. Press OPTICS POWER ON pushbutton on Test Control panel so that OPTICS POWER ON pushbutton shall light.

2. Insure that the TELESCOPE TRUNNION switch on the Indicator Control panel is set to SLAVE TO SXT and the TRACKER switch is set to OFF.

3. Insure that CH4 AC, CH5 AC, CH6 AC, 800~ 0 PH REFERENCE and OPT 800~ PH GEN pushbuttons on Oscillograph Signal Selector panel are lighted and SCT TRUN, SXT SHAFT and SXT TRUN switches on PSA Test Point Adapter are set to 1:1.

HIGH SPEED SLEW RATE

4. Set the CHANNEL 2 switch on the Oscillograph Signal Selector panel to 12 and CHANNEL 5 switch to 11, and monitor the following signals:

a. SXT Trunnion MDA Tach Mon. on CHANNEL 2.

b. SCT Trunnion MDA Tach Mon. on CHANNEL 5.

5. Deleted

VERIFICATION WITH SIDL REQUIRED BEFORE USE

DATE 30 JUN 66

JOB OPTICS SLEW RATE TEST **JDC** 12213 **REV** J **PAGE** 2 **OF** 6

SUBSYSTEM G AND N SYSTEM **ASSY**

6. Set the OPTICS MODE switch on the Indicator Control panel to ZERO.

7. Press CHART SPEEDS 5 pushbutton on the Oscillograph Control panel and set CHANNEL 2 sensitivity on the Oscillograph Amplifier panel to 500 MV/MM and CHANNEL 5 sensitivity to 200 mv/mm.

8. Set SCOPE "A" INPUT to SIG 2 and CROSSBAR CONTROL to 14 on Primary Signal Selector panel to monitor SXT Trunnion MDA Output Mon. on Oscilloscope.

9. Set CONTROLLER COUPLING switch to DIRECT, CONTROLLER SPEED to HI, and after approximately 20 seconds set OPTICS MODE switch to MAN on Indicator Control panel.

10. Start Oscillograph by setting CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

11. Measure and record the steady state peak to peak voltage indicated on the Oscilloscope while holding the Optics Hand Controller to the upper limit not longer than 10 seconds. Release the Optics Hand Controller and set CHART DRIVE switch to OFF. Set all sensitivities on Oscillograph Amplifier panel to OFF and record maximum steady state indications of CHANNELS 2 and 5.

12. Set OPTICS MODE switch to ZERO.

13. Set CHANNEL 1 on the Oscillograph Signal Selector panel to 13 and monitor SCT Shaft MDA Tach Mon. signal on CHANNEL 1.

14. Set CHANNEL 1 sensitivity on Oscillograph Amplifier panel to 500 mv/mm.

15. Set SCOPE "A" INPUT to SIG 1 and CROSSBAR CONTROL to 14 on Primary Signal Selector panel to monitor SXT Shaft MDA Output Mon. on Oscilloscope.

16. Insure that 20 seconds have elapsed since step 12 and set the OPTICS MODE switch to MANUAL on the Indicator Control panel. Start the Oscillograph by setting CHART DRIVE switch on the Oscillograph Control panel to MM/SEC.

17. Measure and record the steady state peak to peak voltage indicated on the Oscilloscope while holding the Optics Hand Controller to the right limit not longer than 10 seconds. Release the Optics Hand Controller and set CHART DRIVE switch to OFF. Set all sensitivities on Oscillograph Amplifier panel to OFF and record the maximum steady state indications of CHANNEL 1.

18. Set the CHANNEL 1 switch on the Oscillograph Signal Selector panel to 12 to monitor the SXT Shaft MDA Tach Mon. voltage on CHANNEL 1.

DATE 30 JUN 66

JOB OPTICS SLEW RATE TEST **JDC** 12213 **REV** J **PAGE** 3 **OF** 6

SUBSYSTEM G AND N SYSTEM **ASSY**

19. Set CHANNEL 1 sensitivity to 500 mv/mm on the Oscillograph Amplifier panel.

20. Start the Oscillograph by setting the CHART DRIVE switch on the Oscillograph Control panel to MM/SEC.

21. Hold the Optics Hand Controller to the left limit not longer than 10 seconds. Release the Optics Hand Controller and set OPTICS MODE switch to ZERO.

22. Stop Oscillograph and record maximum steady state indication on CHANNEL 1.

MEDIUM SPEED SLEW RATE

23. Set VOLTMETER INPUT to PAVM SIG 1 and CROSSBAR CONTROL to 05. Set PAVM FUNCTION selector to 0° to monitor in phase voltage of the SCT Trunnion MDA TACH Mon.

24. Set the CONTROLLER SPEED to MED and insuring that 20 seconds have elapsed since step 21, set the OPTICS MODE switch to MAN on the Indicator Control panel.

25. Measure and record the voltage indicated on the PAVM while holding the Optics Hand Controller to the upper limit not longer than 20 seconds. Release the Optics hand controller.

26. Set CHANNEL 5 switch to 11 on Oscillograph Signal Selector panel to monitor the SCT Trunnion MDA TACH Mon.

27. Set VOLTMETER INPUT to PAVM SIG 2 and CROSSBAR CONTROL to 09 to monitor the SXT Trunnion MDA TACH Mon.

28. Set CHANNEL 5 sensitivity to 10 MV/MM on Oscillograph Amplifier panel. Press CHART SPEEDS 20 pushbutton on the Oscillograph Control Panel and set CHART DRIVE switch to MM/SEC.

29. Measure and record the voltage indicated on the PAVM while holding the Optics Hand Controller to the lower limit not longer than 20 seconds. Release the Optics Hand Controller and set CHART DRIVE switch to OFF. Set all sensitivities on Oscillograph Amplifier panel to OFF and record steady state indication of CHANNEL 5 per Figure 1. Record maximum width of any pulses at 1/2 positive peak or 1/2 negative peak points on CHANNEL 5 per Figure 1. If no pulses occur, write none on the data sheet.

30. Set the OPTICS MODE switch on the Indicator Control panel to ZERO.

31. Set VOLTMETER INPUT to PAVM SIG 2 and CROSSBAR CONTROL to 04 to monitor the SCT Shaft MDA TACH Mon.

32. Insure that 20 seconds have elapsed since step 30. Set OPTICS MODE switch on Indicator Control panel to MAN.

33. Measure and record the voltage indicated on the PAVM while holding the Optics Hand Controller to the right limit not longer than 20 seconds. Release the Optics Hand Controller.

DATE 30 JUN 66

JOB OPTICS SLEW RATE TEST **JDC** 12213 **REV** J **PAGE** 4 **OF** 6

SUBSYSTEM G AND N SYSTEM **ASSY**

34. Set CHANNEL 1 switch to 13 on Oscillograph Signal Selector panel to monitor the SCT Shaft MDA TACH Mon.

35. Set VOLTMETER INPUT to PAVM SIG 2 and CROSSBAR CONTROL to 07 to monitor the SXT Shaft MDA Tach Mon.

36. Set CHANNEL 1 sensitivity to 20 MV/MM on Oscillograph Amplifier panel and set CHART DRIVE switch to MM/SEC.

37. Measure and record the voltage indicated on the PAVM while holding the Optics Hand Controller to the left limit not longer than 20 seconds. Release the Optics Hand Controller and set CHART DRIVE switch to OFF. Set all sensitivities on Oscillograph Amplifier panel to OFF and record steady state indication of CHANNEL 1 per Figure 1. Record maximum width of any pulses at 1/2 positive peak or 1/2 negative peak points on CHANNEL 1 per Figure 1. If no pulses occur, write none on the data sheet.

LOW SPEED SLEW RATE

38. Set OPTICS MODE switch to ZERO and CONTROLLER SPEED switch to LO on Indicator Control panel.

39. Set the CHANNEL 2 switch to 12 and the CHANNEL 5 switch to 11 on the Oscillograph Signal Selector panel to monitor:

a. SXT Trun MDA Tach Mon. on CHANNEL 2.

b. SCT Trun MDA Tach Mon. on CHANNEL 5.

40. Set VOLTMETER INPUT to PAVM SIG 2 and CROSSBAR CONTROL to 06 to monitor the CDU Trunnion Fine Error.

41. Set CHANNEL 2 sensitivity to 10 MV/MM and CHANNEL 5 sensitivity to 5 MV/MM on Oscillograph Amplifier panel and set CHART DRIVE switch to MM/SEC.

42. Insure that 20 seconds have elapsed since step 38, then set OPTICS MODE switch on the Indicator Control panel to MAN.

43. Measure and record the voltage indicated on the PAVM while holding the Optics Hand Controller to the lower limit until the SXT is against the Trunnion stop as indicated by a nominal (unchanging) value on the Trunnion TPAC. Set CHART DRIVE switch to OFF and continue holding the Optics Hand Controller to lower limit.

44. Set the VOLTMETER INPUT switch to PAVM SIG 1 and the CROSSBAR CONTROL to 06. Measure and record the SXT TRUN MDA P/A voltage indicated on the PAVM. Release the Optics Hand Controller.

45. Set all sensitivities on Oscillograph Amplifier panel to OFF and record steady state indication of CHANNELS 2 and 5 per Figure 1. Record maximum width of any pulses at 1/2 positive peak or 1/2 negative peak points on CHANNELS 2 and 5 per Figure 1.

DATE 30 JUN 66

46. Set VOLTMETER INPUT to PAVM SIG 1 and CROSSBAR CONTROL to 05 to monitor the SCT Trunnion MDA Tach Mon.

47. Set CHANNEL 2 sensitivity to 10 MV/MM and CHANNEL 5 sensitivity to 5 MV/MM on Oscillograph Amplifier panel and set CHART DRIVE switch to MM/SEC.

48. Measure and record the voltage indicated on the PAVM while holding the Optics Hand Controller to the upper limit until the SXT is against the Trunnion stop as indicated by a nominal (unchanging) value on the Trunnion TPAC. Release the Optics Hand Controller.

49. Set all sensitivities on Oscillograph Amplifier panel to OFF and record steady state indication of CHANNELS 2 and 5 per Figure 1. Record maximum width of any pulses at 1/2 positive peak or 1/2 negative peak points on CHANNELS 2 and 5 per Figure 1.

50. Set the OPTICS MODE switch on the Indicator Control panel to ZERO.

51. Set the CHANNEL 1 switch on the Oscillograph Signal Selector panel to 12 and monitor SXT Shaft MDA Tach Mon signal on CHANNEL 1.

52. Set VOLTMETER INPUT to PAVM SIG 2 and CROSSBAR CONTROL to 05 to monitor the CDU Shaft Fine Error.

53. Set CHANNEL 1 sensitivity on the Oscillograph Amplifier panel to 10 MV/MM and set CHART DRIVE to MM/SEC.

54. Insure that 20 seconds have elapsed since step 50, then set the OPTICS MODE switch on the Indicator Control panel to MAN.

55. Measure and record voltage indicated on PAVM while holding Optics Hand Controller to right limit until SXT is against Shaft stop as indicated by a nominal (unchanging) value of +270° on the Shaft TPAC. Set CHART DRIVE switch to OFF and continue holding the Optics Hand Controller to right limit.

56. Set the VOLTMETER INPUT switch to PAVM SIG 2 and the CROSSBAR CONTROL to 03. Measure and record the SXT Shaft MDA P/A voltage on the PAVM. Release the Optics Hand Controller.

57. Set all sensitivities on Oscillograph Amplifier panel to OFF and record steady state indication of CHANNEL 1 per Figure 1. Record maximum width of any pulses at 1/2 positive peak or 1/2 negative peak points of CHANNEL 1 per Figure 1.

58. Set the CHANNEL 1 switch on the Oscillograph Signal Selector panel to 13 to monitor the SCT Shaft MDA Tach Mon. on CHANNEL 1 of the Oscillograph.

59. Set the CHANNEL 1 sensitivity control on the Oscillograph Amplifier panel to 5

MV/MM and set the CHART DRIVE switch on the Oscillograph Control panel to MM/SEC.

60. Hold Optics Hand Controller to left limit until SXT is against Shaft stop as indicated by a nominal (unchanging) value of approximately +90° on the Shaft TPAC. Release Optics Hand Controller and set the CHART DRIVE switch to OFF.

61. Set the CHANNEL 1 sensitivity control on the Oscillograph Amplifier panel to OFF and record the maximum steady state indication on CHANNEL 1. Record maximum width of any pulses at 1/2 positive peak or 1/2 negative peak points of CHANNEL 1 per Figure 1.

62. Set the OPTICS MODE switch on the Indicator Control panel to ZERO.

63. Set the CROSSBAR CONTROL to the following positions and measure the quadrature voltage indicated on the PAVM after a minimum of 20 seconds have elapsed since initiating step 62. Insure that the TELESCOPE TRUNNION switch is in the SLAVE to SXT position.

Signal	CROSSBAR CONTROL
a. SCT Trun MDA P/A Mon.	103
b. SXT Shaft MDA P/A Mon.	203
c. SXT Trun MDA P/A Mon.	106
d. SCT Shaft MDA P/A Mon.	210

64. Press OPTICS POWER ON pushbutton on Test Control panel and OPTICS POWER ON pushbutton shall go out.

IMPORTANT Avoid repeated slewing of SXT shaft and trunnion axes into their mechanical stops.

INTERVAL

TOOLS AND MATERIAL

NOTE: Oscillograph Amplifier sensitivities stated herein are nominal and may be adjusted at the discretion of the operator.

INITIALIZATION

1. Perform JDC 12215 to establish a Master Initialization condition. Press OPTICS POWER ON pushbutton on Test Control panel so that OPTICS POWER ON pushbutton shall light.

2. Insure that the TELESCOPE TRUNNION switch on the Indicator Control panel is set to SLAVE TO SXT and the TRACKER switch is set to OFF.

3. Insure that CH4 AC, CH5 AC, CH6 AC, 800~ 0 PH REFERENCE and OPT 800~ PH GEN pushbuttons on Oscillograph Signal Selector panel are lighted and SCT TRUN, SXT SHAFT and SXT TRUN switches on PSA Test Point Adapter are set to 1:1.

HIGH SPEED SLEW RATE

4. Set the CHANNEL 2 switch on the Oscillograph Signal Selector panel to 12 and CHANNEL 5 switch to 11, and monitor the following signals:

a. SXT Trunnion MDA Tach Mon. on CHANNEL 2.

b. SCT Trunnion MDA Tach Mon. on CHANNEL 5.

5. Deleted

VERIFICATION WITH SIDL REQUIRED BEFORE USE

DATE 30 JUN 66

---

6. Set the OPTICS MODE switch on the Indicator Control panel to ZERO.

7. Press CHART SPEEDS 5 pushbutton on the Oscillograph Control panel and set CHANNEL 2 sensitivity on the Oscillograph Amplifier panel to 500 MV/MM and CHANNEL 5 sensitivity to 200 mv/mm.

8. Set SCOPE "A" INPUT to SIG 2 and CROSSBAR CONTROL to 14 on Primary Signal Selector panel to monitor SXT Trunnion MDA Output Mon. on Oscilloscope.

9. Set CONTROLLER COUPLING switch to DIRECT, CONTROLLER SPEED to HI, and after approximately 20 seconds set OPTICS MODE switch to MAN on Indicator Control panel.

10. Start Oscillograph by setting CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

11. Measure and record the steady state peak to peak voltage indicated on the Oscilloscope while holding the Optics Hand Controller to the upper limit not longer than 10 seconds. Release the Optics Hand Controller and set CHART DRIVE switch to OFF. Set all sensitivities on Oscillograph Amplifier panel to OFF and record maximum steady state indications of CHANNELS 2 and 5.

12. Set OPTICS MODE switch to ZERO.

13. Set CHANNEL 1 on the Oscillograph Signal Selector panel to 13 and monitor SCT Shaft MDA Tach Mon. signal on CHANNEL 1.

14. Set CHANNEL 1 sensitivity on Oscillograph Amplifier panel to 500 mv/mm.

15. Set SCOPE "A" INPUT to SIG 1 and CROSSBAR CONTROL to 14 on Primary Signal Selector panel to monitor SXT Shaft MDA Output Mon. on Oscilloscope.

16. Insure that 20 seconds have elapsed since step 12 and set the OPTICS MODE switch to MANUAL on the Indicator Control panel. Start the Oscillograph by setting CHART DRIVE switch on the Oscillograph Control panel to MM/SEC.

17. Measure and record the steady state peak to peak voltage indicated on the Oscilloscope while holding the Optics Hand Controller to the right limit not longer than 10 seconds. Release the Optics Hand Controller and set CHART DRIVE switch to OFF. Set all sensitivities on Oscillograph Amplifier panel to OFF and record the maximum steady state indications of CHANNEL 1.

18. Set the CHANNEL 1 switch on the Oscillograph Signal Selector panel to 12 to monitor the SXT Shaft MDA Tach Mon. voltage on CHANNEL 1.

---

19. Set CHANNEL 1 sensitivity to 500 mv/mm on the Oscillograph Amplifier panel.

20. Start the Oscillograph by setting the CHART DRIVE switch on the Oscillograph Control panel to MM/SEC.

21. Hold the Optics Hand Controller to the left limit not longer than 10 seconds. Release the Optics Hand Controller and set OPTICS MODE switch to ZERO.

22. Stop Oscillograph and record maximum steady state indication on CHANNEL 1.

MEDIUM SPEED SLEW RATE

23. Set VOLTMETER INPUT to PAVM SIG 1 and CROSSBAR CONTROL to 05. Set PAVM FUNCTION selector to 0° to monitor in phase voltage of the SCT Trunnion MDA TACH Mon.

24. Set the CONTROLLER SPEED to MED and insuring that 20 seconds have elapsed since step 21, set the OPTICS MODE switch to MAN on the Indicator Control panel.

25. Measure and record the voltage indicated on the PAVM while holding the Optics Hand Controller to the upper limit not longer than 20 seconds. Release the Optics hand controller.

26. Set CHANNEL 5 switch to 11 on Oscillograph Signal Selector panel to monitor the SCT Trunnion MDA TACH Mon.

27. Set VOLTMETER INPUT to PAVM SIG 2 and CROSSBAR CONTROL to 09 to monitor the SXT Trunnion MDA TACH Mon.

28. Set CHANNEL 5 sensitivity to 10 MV/MM on Oscillograph Amplifier panel. Press CHART SPEEDS 20 pushbutton on the Oscillograph Control Panel and set CHART DRIVE switch to MM/SEC.

29. Measure and record the voltage indicated on the PAVM while holding the Optics Hand Controller to the lower limit not longer than 20 seconds. Release the Optics Hand Controller and set CHART DRIVE switch to OFF. Set all sensitivities on Oscillograph Amplifier panel to OFF and record steady state indication of CHANNEL 5 per Figure 1. Record maximum width of any pulses at 1/2 positive peak or 1/2 negative peak points on CHANNEL 5 per Figure 1. If no pulses occur, write none on the data sheet.

30. Set the OPTICS MODE switch on the Indicator Control panel to ZERO.

31. Set VOLTMETER INPUT to PAVM SIG 2 and CROSSBAR CONTROL to 04 to monitor the SCT Shaft MDA TACH Mon.

32. Insure that 20 seconds have elapsed since step 30. Set OPTICS MODE switch on Indicator Control panel to MAN.

33. Measure and record the voltage indicated on the PAVM while holding the Optics Hand Controller to the right limit not longer than 20 seconds. Release the Optics Hand Controller.

---

34. Set CHANNEL 1 switch to 13 on Oscillograph Signal Selector panel to monitor the SCT Shaft MDA TACH Mon.

35. Set VOLTMETER INPUT to PAVM SIG 2 and CROSSBAR CONTROL to 07 to monitor the SXT Shaft MDA Tach Mon.

36. Set CHANNEL 1 sensitivity to 20 MV/MM on Oscillograph Amplifier panel and set CHART DRIVE switch to MM/SEC.

37. Measure and record the voltage indicated on the PAVM while holding the Optics Hand Controller to the left limit not longer than 20 seconds. Release the Optics Hand Controller and set CHART DRIVE switch to OFF. Set all sensitivities on Oscillograph Amplifier panel to OFF and record steady state indication of CHANNEL 1 per Figure 1. Record maximum width of any pulses at 1/2 positive peak or 1/2 negative peak points on CHANNEL 1 per Figure 1. If no pulses occur, write none on the data sheet.

LOW SPEED SLEW RATE

38. Set OPTICS MODE switch to ZERO and CONTROLLER SPEED switch to LO on Indicator Control panel.

39. Set VOLTMETER INPUT to PAVM SIG 2 and CROSSBAR CONTROL to 06 to monitor the CDU Trunnion Fine Error.

40. Insure that 20 seconds have elapsed since step 38, then set OPTICS MODE switch on the Indicator Control panel to MAN.

41. Measure and record the voltage indicated on the PAVM while holding the Optics Hand Controller to the lower limit until the SXT is against the Trunnion stop as indicated by a nominal (unchanging) value on the Trunnion TPAC.

42. Set the VOLTMETER INPUT switch to PAVM SIG 1 and the CROSSBAR CONTROL to 06. Measure and record the SXT TRUN MDA P/A voltage indicated on the PAVM. Release the Optics Hand Controller.

43. Set VOLTMETER INPUT to PAVM SIG 1 and CROSSBAR CONTROL to 05 to monitor the SCT Trunnion MDA Tach Mon.

44. Set the CHANNEL 2 switch to 12 and the CHANNEL 5 switch to 11 on the Oscillograph Signal Selector panel to monitor:

a. SXT Trun MDA Tach Mon. on CHANNEL 2

b. SCT Trun MDA Tach Mon. on CHANNEL 5

45. Set CHANNEL 2 sensitivity to 10 MV/MM and CHANNEL 5 sensitivity to 5 MV/MM on Oscillograph Amplifier panel and set CHART DRIVE switch to MM/SEC.

46. Measure and record the voltage indicated on the PAVM while holding the Optics Hand Controller to the upper limit until the SXT Trunnion reaches 85° LOS as indicated by the Trunnion TPAC. Release the Optics Hand Controller.

47. Set all sensitivities on Oscillograph Amplifier panel to OFF and record steady state indication of CHANNELS 2 and 5 per Figure 1. Record maximum width of any

pulses at 1/2 positive peak or 1/2 negative peak points on CHANNELS 2 and 5 per Figure 1.

48. Set the OPTICS MODE switch on the Indicator Control panel to ZERO.

49. Set the CHANNEL 1 switch on the Oscillograph Signal Selector panel to 12 and monitor SXT Shaft MDA Tach Mon signal on CHANNEL 1.

50. Set VOLTMETER INPUT to PAVM SIG 2 and CROSSBAR CONTROL to 05 to monitor the CDU Shaft Fine Error.

51. Set CHANNEL 1 sensitivity on the Oscillograph Amplifier panel to 10 MV/MM and set CHART DRIVE to MM/SEC.

52. Insure that 20 seconds have elapsed since step 48, then set the OPTICS MODE switch on the Indicator Control panel to MAN.

53. Measure and record voltage indicated on PAVM while holding Optics Hand Controller to right limit until SXT is against Shaft stop as indicated by a nominal (unchanging) value of +270° on the Shaft TPAC. Set CHART DRIVE switch to OFF and continue holding the Optics Hand Controller to right limit.

54. Set the VOLTMETER INPUT switch to PAVM SIG 2 and the CROSSBAR CONTROL to 03. Measure and record the SXT Shaft MDA P/A voltage on the PAVM. Release the Optics Hand Controller.

55. Set all sensitivities on Oscillograph Amplifier panel to OFF and record steady state indication of CHANNEL 1 per Figure 1. Record maximum width of any pulses at 1/2 positive peak or 1/2 negative peak points of CHANNEL 1 per Figure 1.

56. Set the CHANNEL 1 switch on the Oscillograph Signal Selector panel to 13 to monitor the SCT Shaft MDA Tach Mon. on CHANNEL 1 of the Oscillograph.

57. Set the CHANNEL 1 sensitivity control on the Oscillograph Amplifier panel to 5 MV/MM and set the CHART DRIVE switch on the Oscillograph Control panel to MM/SEC.

58. Hold Optics Hand Controller to left limit until SXT is against Shaft stop as indicated by a nominal (unchanging) value of approximately +90° on the Shaft TPAC. Release Optics Hand Controller and set the CHART DRIVE switch to OFF.

59. Set the CHANNEL 1 sensitivity control on the Oscillograph Amplifier panel to OFF and record the maximum steady state indication on CHANNEL 1. Record maximum width of any pulses at 1/2 positive peak or 1/2 negative peak points of CHANNEL 1 per Figure 1.

---

60. Set the OPTICS MODE switch on the Indicator Control panel to ZERO.

61. Set the CROSSBAR CONTROL to the following positions and measure the quadrature voltage indicated on the PAVM after a minimum of 20 seconds have elapsed since initiating step 60. Insure that the TELESCOPE TRUNNION switch is in the SLAVE to SXT position.

Signal	CROSSBAR CONTROL
a. SCT Trun MDA P/A Mon.	103
b. SXT Shaft MDA P/A Mon.	203
c. SXT Trun MDA P/A Mon.	106
d. SCT Shaft MDA P/A Mon.	210

62. Press OPTICS POWER ON pushbutton on Test Control panel and OPTICS POWER ON pushbutton shall go out.

PH GEN pushbuttons on Oscillograph Signal Selector panel are lighted.

5. Insure SCT TRUN, SXT SHAFT, and SXT TRUN switches on PSA Test Point Adapter are set to 1:1.

HIGH SPEED SLEW RATE

6. Set CHANNEL 2 switch on Oscillograph Signal Selector panel to 12 and CHANNEL 5 switch to 11 to monitor the following signals:

a. SXT Trunnion MDA Tach Mon. on CHANNEL 2

b. SCT Trunnion MDA Tach Mon. on CHANNEL 5

7. Set SCOPE "A" INPUT switch on Primary Signal Selector panel to SIG 2 and CROSSBAR CONTROL to 14 to monitor the SXT Trunnion MDA Output Mon. on Oscilloscope.

8. Press CHART SPEEDS 5 pushbutton on Oscillograph Control panel. Set CHANNEL 2 sensitivity on the Oscillograph Amplifier panel to 500 MV/MM and CHANNEL 5 sensitivity to 200 MV/MM.

NOTE: Step 9 applies to Indicator Control panel 2021290 only.

9. Set OPTICS ZERO switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS ZERO switch to OFF.

NOTE: Step 9A applies to all Indicator Control panels except 2021290.

9A. Set OPTICS MODE switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS MODE switch to MAN.

10. Start Oscillograph by setting CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

11. Measure and record the steady state peak to peak voltage indicated on the Oscilloscope while holding the Optics Hand Controller to the upper limit not longer than 10 seconds. Release the Optics Hand Controller and set CHART DRIVE switch to OFF. Set all sensitivities on Oscillograph Amplifier panel to OFF and record maximum steady state indications of CHANNELS 2 and 5.

12. Set CHANNEL 1 switch on Oscillograph Signal Selector panel to 13 to monitor the SCT Shaft MDA Tach Mon. signal on CHANNEL 1.

13. Set CHANNEL 1 sensitivity on Oscillograph Amplifier panel to 500 MV/MM.

14. Set SCOPE "A" INPUT switch on Primary Signal Selector panel to SIG 1 and CROSSBAR CONTROL to 14 to monitor the SXT Shaft MDA Output Mon. on Oscilloscope.

NOTE: Step 15 applies to Indicator Control panel 2021290 only.

15. Set OPTICS ZERO switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS ZERO switch to OFF.

DATE 30 JUN 66

NOTE: Step 15A applies to all Indicator Control panels except 2021290.

15A. Set OPTICS MODE switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS MODE switch to MAN.

16. Start the Oscillograph by setting CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

17. Measure and record the steady state peak to peak voltage indicated on the Oscilloscope while holding the Optics Hand Controller to the right limit not longer than 10 seconds. Release the Optics Hand Controller and set CHART DRIVE switch to OFF. Set all sensitivities on Oscillograph Amplifier panel to OFF and record the maximum steady state indications of CHANNEL 1.

18. Set the CHANNEL 1 switch on the Oscillograph Signal Selector panel to 12 to monitor the SXT Shaft MDA Tach Mon. voltage on CHANNEL 1.

19. Set CHANNEL 1 sensitivity to 500 mv/mm on the Oscillograph Amplifier panel.

20. Start the Oscillograph by setting the CHART DRIVE switch on the Oscillograph Control panel to MM/SEC.

21. Hold Optics Hand Controller to the left limit not longer than 10 seconds. Release Optics Hand Controller.

22. Stop Oscillograph and record maximum steady state indication on CHANNEL 1.

MEDIUM SPEED SLEW RATE

23. Set VOLTMETER INPUT PAVM switch on Primary Signal Selector panel to SIG 1 and CROSSBAR CONTROL to 05. Set PAVM FUNCTION selector to 0° to monitor in-phase voltage of the SCT Trunnion MDA Tach Mon.

NOTE: Step 24 applies to Indicator Control panel 2021290 only.

24. Set OPTICS ZERO switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS ZERO switch to OFF. Set OPTICS SPEED switch to MED.

NOTE: Step 24A applies to all Indicator Control panels except 2021290.

24A. Set OPTICS MODE switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS MODE switch to MAN. Set OPTICS CONTROLLER SPEED switch to MED.

25. Measure and record the voltage indicated on the PAVM while holding the Optics Hand Controller to the upper limit not longer than 20 seconds. Release the Optics hand controller.

26. Set CHANNEL 5 switch to 11 on Oscillograph Signal Selector panel to monitor the SCT Trunnion MDA TACH Mon.

27. Set VOLTMETER INPUT PAVM switch on Primary Signal Selector panel SIG 2 and CROSSBAR CONTROL to 09 to monitor the SXT Trunnion MDA TACH Mon.

DATE 30 JUN 66

28. Set CHANNEL 5 sensitivity to 10 MV/MM on Oscillograph Amplifier panel. Press CHART SPEEDS 20 pushbutton on the Oscillograph Control Panel and set CHART DRIVE switch to MM/SEC.

29. Measure and record the voltage indicated on the PAVM while holding the Optics Hand Controller to the lower limit not longer than 20 seconds. Release the Optics Hand Controller and set CHART DRIVE switch to OFF. Set all sensitivities on Oscillograph Amplifier panel to OFF and record steady state indication of CHANNEL 5 per Figure 1. Record maximum width of any pulses at 1/2 positive peak or 1/2 negative peak points on CHANNEL 5 per Figure 1. If no pulses occur, write none on the data sheet.

30. Deleted.

31. Set VOLTMETER INPUT PAVM switch on Primary Signal Selector panel to SIG 2 and CROSSBAR CONTROL to 04 to monitor the SCT Shaft MDA Tach Mon.

NOTE: Step 32 applies to Indicator Control panel 2021290 only.

32. Set OPTICS ZERO switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS ZERO switch to OFF.

NOTE: Step 32A applies to all Indicator Control panels except 2021290.

32A. Set OPTICS MODE switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS MODE switch to MAN.

33. Measure and record the voltage indicated on the PAVM while holding the Optics Hand Controller to the right limit not longer than 20 seconds. Release the Optics Hand Controller.

34. Set CHANNEL 1 switch to 13 on Oscillograph Signal Selector panel to monitor the SCT Shaft MDA TACH Mon.

35. Set VOLTMETER INPUT PAVM switch on Primary Signal Selector panel to SIG 2 and CROSSBAR CONTROL to 07 to monitor the SXT Shaft MDA Tach Mon.

36. Set CHANNEL 1 sensitivity to 20 MV/MM on Oscillograph Amplifier panel and set CHART DRIVE switch to MM/SEC.

37. Measure and record the voltage indicated on the PAVM while holding the Optics Hand Controller to the left limit not longer than 20 seconds. Release the Optics Hand Controller and set CHART DRIVE switch to OFF. Set all sensitivities on Oscillograph Amplifier panel to OFF and record steady state indication of CHANNEL 1 per Figure 1. Record maximum width of any pulses at 1/2 positive peak or 1/2 negative peak points on CHANNEL 1 per Figure 1. If no pulses occur, write none on the data sheet.

LOW SPEED SLEW RATE

38. Set VOLTMETER INPUT PAVM switch on Primary Signal Selector panel to SIG 2 and CROSSBAR CONTROL to 06 to monitor the CDU Trunnion Fine Error.

39. Deleted.

DATE 30 JUN 66

NOTE: Step 40 applies to Indicator Control panel 2021290 only.

40. Set OPTICS ZERO switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS ZERO switch to OFF. Set OPTICS SPEED switch to LO.

NOTE: Step 40A applies to all Indicator Control panels except 2021290.

40A. Set OPTICS MODE switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS MODE switch to MAN. Set OPTICS CONTROLLER SPEED switch to LO.

41. Measure and record the voltage indicated on the PAVM while holding Optics Hand Controller to the lower limit until SXT is against Trunnion stop as indicated by a nominal (unchanging) value on the Trunnion TPAC. Continue holding Optics Hand Controller to lower limit.

42. Set VOLTMETER INPUT PAVM switch on Primary Signal Selector panel to SIG 1 and CROSSBAR CONTROL to 06. Measure and record the SXT Trun MDA P/A voltage indicated on PAVM. Release Optics Hand Controller.

43. Set VOLTMETER INPUT PAVM switch to SIG 1 and CROSSBAR CONTROL to 05 to monitor the SCT Trunnion MDA Tach Mon.

44. Set the CHANNEL 2 switch to 12 and the CHANNEL 5 switch to 11 on the Oscillograph Signal Selector panel to monitor:

a. SXT Trun MDA Tach Mon. on CHANNEL 2

b. SCT Trun MDA Tach Mon. on CHANNEL 5

45. Set CHANNEL 2 sensitivity to 10 MV/MM and CHANNEL 5 sensitivity to 5 MV/MM on Oscillograph Amplifier panel and set CHART DRIVE switch to MM/SEC.

46. Measure and record the voltage indicated on the PAVM while holding the Optics Hand Controller to the upper limit until the SXT Trunnion reaches 85° LOS as indicated by the Trunnion TPAC. Release the Optics Hand Controller.

47. Set CHART DRIVE switch on Oscillograph Control panel to OFF. Set all sensitivities on Oscillograph Amplifier to OFF. Record steady state indication of CHANNELS 2 and 5 per Figure 1. Record maximum width of any pulses at 1/2 positive peak or 1/2 negative peak points on CHANNELS 2 and 5 per Figure 1.

48. Set CHANNEL 1 switch on Oscillograph Signal Selector panel to 12 to monitor SXT Shaft MDA Tach Mon. signal on CHANNEL 1.

49. Set VOLTMETER INPUT PAVM switch on Primary Signal Selector panel to SIG 2 and CROSSBAR CONTROL to 05 to monitor the CDU Shaft Fine Error.

50. Set CHANNEL 1 sensitivity on Oscillograph Amplifier panel to 10 MV/MM.

NOTE: Step 51 applies to Indicator Control panel 2021290 only.

51. Set OPTICS ZERO switch on Indicator Control Panel to ZERO. After 20 seconds, set OPTICS ZERO switch to OFF.

NOTE: Step 51A applies to all Indicator Control panels except 2021290.

51A. Set OPTICS MODE switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS MODE switch to MAN.

52. Start Oscillograph by setting CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

53. Measure and record voltage indicated on PAVM while holding Optics Hand Controller to right limit until SXT is against Shaft stop as indicated by a nominal (unchanging) value of +270° on the Shaft TPAC. Set CHART DRIVE switch to OFF and continue holding the Optics Hand Controller to right limit.

54. Set VOLTMETER INPUT PAVM switch on Primary Signal Selector panel to SIG 2 and the CROSSBAR CONTROL to 03. Measure and record the SXT Shaft MDA P/A voltage on the PAVM. Release the Optics Hand Controller.

55. Set all sensitivities on Oscillograph Amplifier panel to OFF and record steady state indication of CHANNEL 1 per Figure 1. Record maximum width of any pulses at 1/2 positive peak or 1/2 negative peak points of CHANNEL 1 per Figure 1.

56. Set the CHANNEL 1 switch on the Oscillograph Signal Selector panel to 13 to monitor the SCT Shaft MDA Tach Mon. on CHANNEL 1 of the Oscillograph.

57. Set the CHANNEL 1 sensitivity control on the Oscillograph Amplifier panel to 5 MV/MM and set the CHART DRIVE switch on the Oscillograph Control panel to MM/SEC.

58. Hold Optics Hand Controller to left limit until SXT is against Shaft stop as indicated by a nominal (unchanging) value of approximately +90° on the Shaft TPAC. Release Optics Hand Controller and set the CHART DRIVE switch to OFF.

59. Set the CHANNEL 1 sensitivity control on the Oscillograph Amplifier panel to OFF and record the maximum steady state indication on CHANNEL 1. Record maximum width of any pulses at 1/2 positive peak or 1/2 negative peak points of CHANNEL 1 per Figure 1.

NOTE: Step 60 applies to Indicator Control panel 2021290 only.

60. Set OPTICS ZERO switch on Indicator Control panel to ZERO. Wait 20 seconds before proceeding.

NOTE: Step 60A applies to all Indicator Control panels except 2021290.

60A. Set OPTICS MODE switch on Indicator Control panel to ZERO. Wait 20 seconds before proceeding.

61. Set CROSSBAR CONTROL on Primary Signal Selector panel to the following positions and measure the quadrature voltage indicated on the PAVM.

	Signal	CROSSBAR CONTROL
a.	SCT Trun MDA P/A Mon.	103
b.	SXT Shaft MDA P/A Mon.	203
c.	SXT Trun MDA P/A Mon.	106
d.	SCT Shaft MDA P/A Mon.	210

62. Press OPTICS POWER ON pushbutton on Test Control panel and OPTICS POWER ON pushbutton shall go out.

14. Set SCOPE "A" INPUT switch on Primary Signal Selector panel to SIG 1 and CROSSBAR CONTROL to 14 to monitor the SXT Shaft MDA Output Mon. on Oscilloscope.

NOTE: Step 15 applies to Indicator Control panel 2021290 only.

15. Set OPTICS ZERO switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS ZERO switch to OFF.

DATE 30 JUN 66

JOB OPTICS SLEW RATE TEST

JDC 12213 REV M PAGE 3 OF 8

SUBSYSTEM G AND N SYSTEM

ASSY

NOTE: Step 15A applies to all Indicator Control panels except 2021290.

15A. Set OPTICS MODE switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS MODE switch to MAN.

16. Start the Oscillograph by setting CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

17. Measure and record the steady state peak to peak voltage indicated on the Oscilloscope while holding the Optics Hand Controller to the right limit not longer than 10 seconds. Release the Optics Hand Controller and set CHART DRIVE switch to OFF. Set all sensitivities on Oscillograph Amplifier panel to OFF and record the maximum steady state indications of CHANNEL 1.

18. Set the CHANNEL 1 switch on the Oscillograph Signal Selector panel to 12 to monitor the SXT Shaft MDA Tach Mon. voltage on CHANNEL 1.

19. Set CHANNEL 1 sensitivity to 500 mv/mm on the Oscillograph Amplifier panel.

20. Start the Oscillograph by setting the CHART DRIVE switch on the Oscillograph Control panel to MM/SEC.

21. Hold Optics Hand Controller to the left limit not longer than 10 seconds. Release Optics Hand Controller.

22. Stop Oscillograph and record maximum steady state indication on CHANNEL 1.

MEDIUM SPEED SLEW RATE

23. Set VOLTMETER INPUT PAVM switch on Primary Signal Selector panel to SIG 1 and CROSSBAR CONTROL to 05. Set PAVM FUNCTION selector to 0° to monitor in-phase voltage of the SCT Trunnion MDA Tach Mon.

NOTE: Step 24 applies to Indicator Control panel 2021290 only.

24. Set OPTICS ZERO switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS ZERO switch to OFF. Set OPTICS SPEED switch to MED.

NOTE: Step 24A applies to all Indicator Control panels except 2021290.

24A. Set OPTICS MODE switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS MODE switch to MAN. Set OPTICS CONTROLLER SPEED switch to MED.

25. Measure and record the voltage indicated on the PAVM while holding the Optics Hand Controller to the upper limit not longer than 20 seconds. Release the Optics hand controller.

26. Set CHANNEL 5 switch to 11 on Oscillograph Signal Selector panel to monitor the SCT Trunnion MDA TACH Mon.

27. Set VOLTMETER INPUT PAVM switch on Primary Signal Selector panel SIG 2 and CROSSBAR CONTROL to 09 to monitor the SXT Trunnion MDA TACH Mon.

DATE 30 JUN 66

JDC 12213 REV M PAGE 4 OF 8

SUBSYSTEM G AND N SYSTEM

ASSY

28. Set CHANNEL 5 sensitivity to 10 MV/MM on Oscillograph Amplifier panel. Press CHART SPEEDS 20 pushbutton on the Oscillograph Control Panel and set CHART DRIVE switch to MM/SEC.

29. Measure and record the voltage indicated on the PAVM while holding the Optics Hand Controller to the lower limit not longer than 20 seconds. Release the Optics Hand Controller and set CHART DRIVE switch to OFF. Set all sensitivities on Oscillograph Amplifier panel to OFF and record steady state indication of CHANNEL 5 per Figure 1. Record maximum width of any pulses at 1/2 positive peak or 1/2 negative peak points on CHANNEL 5 per Figure 1. If no pulses occur, write none on the data sheet.

30. Deleted.

31. Set VOLTMETER INPUT PAVM switch on Primary Signal Selector panel to SIG 2 and CROSSBAR CONTROL to 04 to monitor the SCT Shaft MDA Tach Mon.

NOTE: Step 32 applies to Indicator Control panel 2021290 only.

32. Set OPTICS ZERO switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS ZERO switch to OFF.

NOTE: Step 32A applies to all Indicator Control panels except 2021290.

32A. Set OPTICS MODE switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS MODE switch to MAN.

33. Measure and record the voltage indicated on the PAVM while holding the Optics Hand Controller to the right limit not longer than 20 seconds. Release the Optics Hand Controller.

34. Set CHANNEL 1 switch to 13 on Oscillograph Signal Selector panel to monitor the SCT Shaft MDA TACH Mon.

35. Set VOLTMETER INPUT PAVM switch on Primary Signal Selector panel to SIG 2 and CROSSBAR CONTROL to 07 to monitor the SXT Shaft MDA Tach Mon.

36. Set CHANNEL 1 sensitivity to 20 MV/MM on Oscillograph Amplifier panel and set CHART DRIVE switch to MM/SEC.

37. Measure and record the voltage indicated on the PAVM while holding the Optics Hand Controller to the left limit not longer than 20 seconds. Release the Optics Hand Controller and set CHART DRIVE switch to OFF. Set all sensitivities on Oscillograph Amplifier panel to OFF and record steady state indication of CHANNEL 1 per Figure 1. Record maximum width of any pulses at 1/2 positive peak or 1/2 negative peak points on CHANNEL 1 per Figure 1. If no pulses occur, write none on the data sheet.

LOW SPEED SLEW RATE

38. Set VOLTMETER INPUT PAVM switch on Primary Signal Selector panel to SIG 2 and CROSSBAR CONTROL to 06 to monitor the CDU Trunnion Fine Error.

39. Deleted.

DATE 30 JUN 66

NOTE: Step 40 applies to
Indicator Control panel
2021290 only.

40. Set OPTICS ZERO switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS ZERO switch to OFF. Set OPTICS SPEED switch to LO.

NOTE: Step 40A applies
to all Indicator Control
panels except 2021290.

40A. Set OPTICS MODE switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS MODE switch to MAN. Set OPTICS CONTROLLER SPEED switch to LO.

41. Measure and record the voltage indicated on the PAVM while holding Optics Hand Controller to the lower limit until SXT is against Trunnion stop as indicated by a nominal (unchanging) value on the Trunnion TPAC. Continue holding Optics Hand Controller to lower limit.

42. Set VOLTMETER INPUT PAVM switch on Primary Signal Selector panel to SIG 1 and CROSSBAR CONTROL to 06. Measure and record the SXT Trun MDA P/A voltage indicated on PAVM. Release Optics Hand Controller.

43. Set VOLTMETER INPUT PAVM switch to SIG 1 and CROSSBAR CONTROL to 05 to monitor the SCT Trunnion MDA Tach Mon.

44. Set the CHANNEL 2 switch to 12 and the CHANNEL 5 switch to 11 on the Oscillograph Signal Selector panel to monitor:

a. SXT Trun MDA Tach Mon. on CHANNEL 2

b. SCT Trun MDA Tach Mon. on CHANNEL 5

45. Set CHANNEL 2 sensitivity to 10 MV/MM and CHANNEL 5 sensitivity to 5 MV/MM on Oscillograph Amplifier panel and set CHART DRIVE switch to MM/SEC.

46. Measure and record the voltage indicated on the PAVM while holding the Optics Hand Controller to the upper limit until the SXT Trunnion reaches 85° LOS as indicated by the Trunnion TPAC. Release the Optics Hand Controller.

47. Set CHART DRIVE switch on Oscillograph Control panel to OFF. Set all sensitivities on Oscillograph Amplifier to OFF. Record steady state indication of CHANNELS 2 and 5 per Figure 1. Record maximum width of any pulses at 1/2 positive peak or 1/2 negative peak points on CHANNELS 2 and 5 per Figure 1.

48. Set CHANNEL 1 switch on Oscillograph Signal Selector panel to 12 to monitor SXT Shaft MDA Tach Mon. signal on CHANNEL 1.

49. Set VOLTMETER INPUT PAVM switch on Primary Signal Selector panel to SIG 2 and CROSSBAR CONTROL to 05 to monitor the CDU Shaft Fine Error.

50. Set CHANNEL 1 sensitivity on Oscillograph Amplifier panel to 10 MV/MM.

NOTE: Step 51 applies to
Indicator Control panel
2021290 only.

51. Set OPTICS ZERO switch on Indicator Control Panel to ZERO. After 20 seconds, set OPTICS ZERO switch to OFF.

NOTE: Step 51A applies
to all Indicator Control
panels except 2021290.

51A. Set OPTICS MODE switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS MODE switch to MAN.

52. Start Oscillograph by setting CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

53. Measure and record voltage indicated on PAVM while holding Optics Hand Controller to right limit until SXT is against Shaft stop as indicated by a nominal (unchanging) value of +270° on the Shaft TPAC. Set CHART DRIVE switch to OFF and continue holding the Optics Hand Controller to right limit.

54. Set VOLTMETER INPUT PAVM switch on Primary Signal Selector panel to SIG 2 and the CROSSBAR CONTROL to 03. Measure and record the SXT Shaft MDA P/A voltage on the PAVM. Release the Optics Hand Controller.

55. Set all sensitivities on Oscillograph Amplifier panel to OFF and record steady state indication of CHANNEL 1 per Figure 1. Record maximum width of any pulses at 1/2 positive peak or 1/2 negative peak points of CHANNEL 1 per Figure 1.

56. Set the CHANNEL 1 switch on the Oscillograph Signal Selector panel to 13 to monitor the SCT Shaft MDA Tach Mon. on CHANNEL 1 of the Oscillograph.

57. Set the CHANNEL 1 sensitivity control on the Oscillograph Amplifier panel to 5 MV/MM and set the CHART DRIVE switch on the Oscillograph Control panel to MM/SEC.

58. Hold Optics Hand Controller to left limit until SXT is against Shaft stop as indicated by a nominal (unchanging) value of approximately +90° on the Shaft TPAC. Release Optics Hand Controller and set the CHART DRIVE switch to OFF.

59. Set the CHANNEL 1 sensitivity control on the Oscillograph Amplifier panel to OFF and record the maximum steady state indication on CHANNEL 1. Record maximum width of any pulses at 1/2 positive peak or 1/2 negative peak points of CHANNEL 1 per Figure 1.

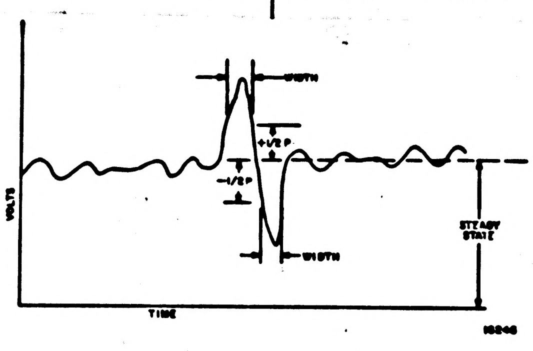

Figure 1. Signal Characteristics Diagram

NOTE: Step 60 applies to
Indicator Control panel
2021290 only.

60. Set OPTICS ZERO switch on Indicator Control panel to ZERO. Wait 20 seconds before proceeding.

NOTE: Step 60A applies
to all Indicator Control
panels except 2021290.

60A. Set OPTICS MODE switch on Indicator Control panel to ZERO. Wait 20 seconds before proceeding.

61. Set CROSSBAR CONTROL on Primary Signal Selector panel to the following positions and measure the quadrature voltage indicated on the PAVM.

Signal	CROSSBAR CONTROL
a. SCT Trun MDA P/A Mon.	103
b. SXT Shaft MDA P/A Mon.	203
c. SXT Trun MDA P/A Mon.	106
d. SCT Shaft MDA P/A Mon.	210

NOTE: Step 62 applies to
Indicator Control panel
2021290 only.

62. Set OPTICS ZERO switch on Indicator Control panel to OFF.

NOTE: Step 62A applies to
all Indicator Control panels
except 2021290.

62A. Set OPTICS MODE switch on Indicator Control panel to MAN.

63. Press MARK pushbutton. Observe DSKY displays VERB 06 NOUN 56 and data in the following form:

a. Row 1 = ±XXX.XX (Shaft angle in degrees)

b. Row 2 = ±XX.XXX (Trunnion angle in degrees)

c. Row 3 = XXX.XX (Time in seconds)

Record Row 1, Row 2, and Row 3 indications.

64. Approximately 60 seconds after first mark, press MARK pushbutton again and record new Row 1, Row 2, and Row 3 indications.

NOTE: Step 65 applies to
Indicator Control panel
2021290 only.

65. Set OPTICS ZERO switch on Indicator Control panel to ZERO.

NOTE: Step 65A applies to
all Indicator Control panels
except 2021290.

65A. Set OPTICS MODE switch on Indicator Control panel to ZERO.

66. Press to extinguish OPTICS POWER ON pushbutton on Test Control panel.

CALCULATIONS

67. Perform the following calculations for hand controller drift rates:

a. Δ Shaft angle = step 64.a - step 63.a

b. Δ Trunnion angle = step 64.b - step 63.b

NOTE: If step 64.c is less than step 63.c, add 163.84 seconds to step 64.c.

c. Δ Time = step 64.c - step 63.c

d. Shaft drift rate = $\frac{\Delta \text{ Shaft angle}}{\Delta \text{ Time}}$

e. Trunnion drift rate = $\frac{\Delta \text{ Trunnion angle}}{\Delta \text{ Time}}$

IMPORTANT Avoid repeated slewing of SXT shaft and trunnion axes into their mechanical stops.

INTERVAL

TOOLS AND MATERIAL

NOTE: Oscillograph Amplifier sensitivities stated herein are nominal and may be adjusted at the discretion of the operator.

INITIALIZATION

1. Perform JDC 12215 to establish a Master Initialization condition.

2. Press to light OPTICS POWER ON pushbutton on Test Control panel.

NOTE: Step 3 applies to Indicator Control panel 2021290 only.

3. Set switches on Indicator Control panel as follows:

a. OPTICS ZERO to OFF

b. OPTICS TEL TRUN to SLAVE TO SXT

c. OPTICS COUPLING to DIRECT

d. OPTICS MODE to MAN

e. OPTICS SPEED to HI

NOTE: Step 3A applies to all Indicator Control panels except 2021290.

3A. Set switches on Indicator Control panel as follows:

a. OPTICS MODE to MAN

b. OPTICS CONTROLLER SPEED to HI

c. OPTICS CONTROLLER COUPLING to DIRECT

d. OPTICS TRACKER to OFF

e. OPTICS TELESCOPE TRUNNION to SLAVE TO SXT

4. Insure CH4 AC, CH5 AC, CH6 AC, 800 ~ 0 PH REFERENCE, and OPT 800 ~ TO

VERIFICATION WITH SIDL REQUIRED BEFORE USE

PH GEN pushbuttons on Oscillograph Signal Selector panel are lighted.

5. Insure SCT TRUN, SXT SHAFT, and SXT TRUN switches on PSA Test Point Adapter are set to 1:1.

HIGH SPEED SLEW RATE

6. Set CHANNEL 2 switch on Oscillograph Signal Selector panel to 12 and CHANNEL 5 switch to 11 to monitor the following signals:

a. SXT Trunnion MDA Tach Mon. on CHANNEL 2

b. SCT Trunnion MDA Tach Mon. on CHANNEL 5

7. Set SCOPE "A" INPUT switch on Primary Signal Selector panel to SIG 2 and CROSSBAR CONTROL to 14 to monitor the SXT Trunnion MDA Output Mon. on Oscilloscope.

8. Press CHART SPEEDS 5 pushbutton on Oscillograph Control panel. Set CHANNEL 2 sensitivity on the Oscillograph Amplifier panel to 500 MV/MM and CHANNEL 5 sensitivity to 200 MV/MM.

NOTE: Step 9 applies to Indicator Control panel 2021290 only.

9. Set OPTICS ZERO switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS ZERO switch to OFF.

NOTE: Step 9A applies to all Indicator Control panels except 2021290.

9A. Set OPTICS MODE switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS MODE switch to MAN.

10. Start Oscillograph by setting CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

11. Measure and record the steady state peak to peak voltage indicated on the Oscilloscope while holding the Optics Hand Controller to the upper limit not longer than 10 seconds. Release the Optics Hand Controller and set CHART DRIVE switch to OFF. Set all sensitivities on Oscillograph Amplifier panel to OFF and record maximum steady state indications of CHANNELS 2 and 5.

12. Set CHANNEL 1 switch on Oscillograph Signal Selector panel to 13 to monitor the SCT Shaft MDA Tach Mon. signal on CHANNEL 1.

13. Set CHANNEL 1 sensitivity on Oscillograph Amplifier panel to 500 MV/MM.

14. Set SCOPE "A" INPUT switch on Primary Signal Selector panel to SIG 1 and CROSSBAR CONTROL to 14 to monitor the SXT Shaft MDA Output Mon. on Oscilloscope.

NOTE: Step 15 applies to Indicator Control panel 2021290 only.

15. Set OPTICS ZERO switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS ZERO switch to OFF.

NOTE: Step 15A applies to all Indicator Control panels except 2021290.

15A. Set OPTICS MODE switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS MODE switch to MAN.

16. Start the Oscillograph by setting CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

17. Measure and record the steady state peak to peak voltage indicated on the Oscilloscope while holding the Optics Hand Controller to the right limit not longer than 10 seconds. Release the Optics Hand Controller and set CHART DRIVE switch to OFF. Set all sensitivities on Oscillograph Amplifier panel to OFF and record the maximum steady state indications of CHANNEL 1.

18. Set the CHANNEL 1 switch on the Oscillograph Signal Selector panel to 12 to monitor the SXT Shaft MDA Tach Mon. voltage on CHANNEL 1.

19. Set CHANNEL 1 sensitivity to 500 mv/mm on the Oscillograph Amplifier panel.

20. Start the Oscillograph by setting the CHART DRIVE switch on the Oscillograph Control panel to MM/SEC.

21. Hold Optics Hand Controller to the left limit not longer than 10 seconds. Release Optics Hand Controller.

22. Stop Oscillograph and record maximum steady state indication on CHANNEL 1.

MEDIUM SPEED SLEW RATE

23. Set VOLTMETER INPUT PAVM switch on Primary Signal Selector panel to SIG 1 and CROSSBAR CONTROL to 05. Set PAVM FUNCTION selector to 0° to monitor in-phase voltage of the SCT Trunnion MDA Tach Mon.

NOTE: Step 24 applies to Indicator Control panel 2021290 only.

24. Set OPTICS ZERO switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS ZERO switch to OFF. Set OPTICS SPEED switch to MED.

NOTE: Step 24A applies to all Indicator Control panels except 2021290.

24A. Set OPTICS MODE switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS MODE switch to MAN. Set OPTICS CONTROLLER SPEED switch to MED.

25. Measure and record the voltage indicated on the PAVM while holding the Optics Hand Controller to the upper limit not longer than 20 seconds. Release the Optics hand controller.

26. Set CHANNEL 5 switch to 11 on Oscillograph Signal Selector panel to monitor the SCT Trunnion MDA TACH Mon.

27. Set VOLTMETER INPUT PAVM switch on Primary Signal Selector panel SIG 2 and CROSSBAR CONTROL to 09 to monitor the SXT Trunnion MDA TACH Mon.

---

28. Set CHANNEL 5 sensitivity to 10 MV/MM on Oscillograph Amplifier panel. Press CHART SPEEDS 20 pushbutton on the Oscillograph Control Panel and set CHART DRIVE switch to MM/SEC.

29. Measure and record the voltage indicated on the PAVM while holding the Optics Hand Controller to the lower limit not longer than 20 seconds. Release the Optics Hand Controller and set CHART DRIVE switch to OFF. Set all sensitivities on Oscillograph Amplifier panel to OFF and record steady state indication of CHANNEL 5 per Figure 1. Record maximum width of any pulses at 1/2 positive peak or 1/2 negative peak points on CHANNEL 5 per Figure 1. If no pulses occur, write none on the data sheet.

30. Deleted.

31. Set VOLTMETER INPUT PAVM switch on Primary Signal Selector panel to SIG 2 and CROSSBAR CONTROL to 04 to monitor the SCT Shaft MDA Tach Mon.

NOTE: Step 32 applies to Indicator Control panel 2021290 only.

32. Set OPTICS ZERO switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS ZERO switch to OFF.

NOTE: Step 32A applies to all Indicator Control panels except 2021290.

32A. Set OPTICS MODE switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS MODE switch to MAN.

33. Measure and record the voltage indicated on the PAVM while holding the Optics Hand Controller to the right limit not longer than 20 seconds. Release the Optics Hand Controller.

34. Set CHANNEL 1 switch to 13 on Oscillograph Signal Selector panel to monitor the SCT Shaft MDA TACH Mon.

35. Set VOLTMETER INPUT PAVM switch on Primary Signal Selector panel to SIG 2 and CROSSBAR CONTROL to 07 to monitor the SXT Shaft MDA Tach Mon.

36. Set CHANNEL 1 sensitivity to 20 MV/MM on Oscillograph Amplifier panel and set CHART DRIVE switch to MM/SEC.

37. Measure and record the voltage indicated on the PAVM while holding the Optics Hand Controller to the left limit not longer than 20 seconds. Release the Optics Hand Controller and set CHART DRIVE switch to OFF. Set all sensitivities on Oscillograph Amplifier panel to OFF and record steady state indication of CHANNEL 1 per Figure 1. Record maximum width of any pulses at 1/2 positive peak or 1/2 negative peak points on CHANNEL 1 per Figure 1. If no pulses occur, write none on the data sheet.

LOW SPEED SLEW RATE

38. Set VOLTMETER INPUT PAVM switch on Primary Signal Selector panel to SIG 2 and CROSSBAR CONTROL to 06 to monitor the CDU Trunnion Fine Error.

39. Deleted.

NOTE: Step 40 applies to Indicator Control panel 2021290 only.

40. Set OPTICS ZERO switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS ZERO switch to OFF. Set OPTICS SPEED switch to LO.

NOTE: Step 40A applies to all Indicator Control panels except 2021290.

40A. Set OPTICS MODE switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS MODE switch to MAN. Set OPTICS CONTROLLER SPEED switch to LO.

41. Measure and record the voltage indicated on the PAVM while holding Optics Hand Controller to the lower limit until SXT is against Trunnion stop as indicated by a nominal (unchanging) value on the Trunnion TPAC. Continue holding Optics Hand Controller to lower limit.

42. Set VOLTMETER INPUT PAVM switch on Primary Signal Selector panel to SIG 1 and CROSSBAR CONTROL to 06. Measure and record the SXT Trun MDA P/A voltage indicated on PAVM. Release Optics Hand Controller.

43. Set VOLTMETER INPUT PAVM switch to SIG 1 and CROSSBAR CONTROL to 05 to monitor the SCT Trunnion MDA Tach Mon.

44. Set the CHANNEL 2 switch to 12 and the CHANNEL 5 switch to 11 on the Oscillograph Signal Selector panel to monitor:

a. SXT Trun MDA Tach Mon. on CHANNEL 2
b. SCT Trun MDA Tach Mon. on CHANNEL 5

45. Set CHANNEL 2 sensitivity to 10 MV/MM and CHANNEL 5 sensitivity to 5 MV/MM on Oscillograph Amplifier panel and set CHART DRIVE switch to MM/SEC.

46. Measure and record the steady state voltage indicated on the PAVM while holding the Optics Hand Controller to the upper limit until the SXT Trunnion reaches 85° LOS as indicated by the Trunnion TPAC. Release the Optics Hand Controller.

47. Set CHART DRIVE switch on Oscillograph Control panel to OFF. Set all sensitivities on Oscillograph Amplifier to OFF. Record steady state indication of CHANNELS 2 and 5 per Figure 1. Record maximum width of any pulses at 1/2 positive peak or 1/2 negative peak points on CHANNELS 2 and 5 per Figure 1.

47A. Measure and record the steady state voltage indicated on PAVM while holding Optics Hand Controller to lower limit. Release Optics Hand Controller.

47B. Add the absolute value recorded in step 46 to the absolute value recorded in step 47A and divide by two. Record results as average value of SCT Trun MDA Tach Mon.

---

48. Set CHANNEL 1 switch on Oscillograph Signal Selector panel to 12 to monitor SXT Shaft MDA Tach Mon. signal on CHANNEL 1.

49. Set VOLTMETER INPUT PAVM switch on Primary Signal Selector panel to SIG 2 and CROSSBAR CONTROL to 05 to monitor the CDU Shaft Fine Error.

50. Set CHANNEL 1 sensitivity on Oscillograph Amplifier panel to 10 MV/MM.

NOTE: Step 51 applies to Indicator Control panel 2021290 only.

51. Set OPTICS ZERO switch on Indicator Control Panel to ZERO. After 20 seconds, set OPTICS ZERO switch to OFF.

NOTE: Step 51A applies to all Indicator Control panels except 2021290.

51A. Set OPTICS MODE switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS MODE switch to MAN.

52. Start Oscillograph by setting CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

53. Measure and record voltage indicated on PAVM while holding Optics Hand Controller to right limit until SXT is against Shaft stop as indicated by a nominal (unchanging) value of +270° on the Shaft TPAC. Set CHART DRIVE switch to OFF and continue holding the Optics Hand Controller to right limit.

54. Set VOLTMETER INPUT PAVM switch on Primary Signal Selector panel to SIG 2 and the CROSSBAR CONTROL to 03. Measure and record the SXT Shaft MDA P/A voltage on the PAVM. Release the Optics Hand Controller.

55. Set all sensitivities on Oscillograph Amplifier panel to OFF and record steady state indication of CHANNEL 1 per Figure 1. Record maximum width of any pulses at 1/2 positive peak or 1/2 negative peak points of CHANNEL 1 per Figure 1.

56. Set the CHANNEL 1 switch on the Oscillograph Signal Selector panel to 13 to monitor the SCT Shaft MDA Tach Mon. on CHANNEL 1 of the Oscillograph.

57. Set the CHANNEL 1 sensitivity control on the Oscillograph Amplifier panel to 5 MV/MM and set the CHART DRIVE switch on the Oscillograph Control panel to MM/SEC.

58. Hold Optics Hand Controller to left limit until SXT is against Shaft stop as indicated by a nominal (unchanging) value of approximately +90° on the Shaft TPAC. Release Optics Hand Controller and set the CHART DRIVE switch to OFF.

59. Set the CHANNEL 1 sensitivity control on the Oscillograph Amplifier panel to OFF and record the maximum steady state indication on CHANNEL 1. Record maximum width of any pulses at 1/2 positive peak or 1/2 negative peak points of CHANNEL 1 per Figure 1.

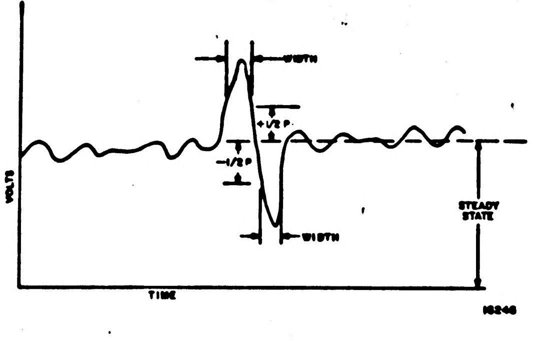

Figure 1. Signal Characteristics Diagram

NOTE: Step 60 applies to Indicator Control panel 2021290 only.

60. Set OPTICS ZERO switch on Indicator Control panel to ZERO. Wait 20 seconds before proceeding.

NOTE: Step 60A applies to all Indicator Control panels except 2021290.

60A. Set OPTICS MODE switch on Indicator Control panel to ZERO. Wait 20 seconds before proceeding.

61. Set CROSSBAR CONTROL on Primary Signal Selector panel to the following positions and measure the quadrature voltage indicated on the PAVM.

	Signal	CROSSBAR CONTROL
a.	SCT Trun MDA P/A Mon.	103
b.	SXT Shaft MDA P/A Mon.	203
c.	SXT Trun MDA P/A Mon.	106
d.	SCT Shaft MDA P/A Mon.	210

NOTE: Step 62 applies to Indicator Control panel 2021290 only.

62. Set OPTICS ZERO switch on Indicator Control panel to OFF.

NOTE: Step 62A applies to all Indicator Control panels except 2021290.

62A. Set OPTICS MODE switch on Indicator Control panel to MAN.

63. Press MARK pushbutton. Observe DSKY displays VERB 06 NOUN 56 and data in the following form:

a. Row 1 = ±XXX.XX (Shaft angle in degrees)
b. Row 2 = ±XX.XXX (Trunnion angle in degrees)
c. Row 3 = XXX.XX (Time in seconds)

Record Row 1, Row 2, and Row 3 indications.

64. Approximately 60 seconds after first mark, press MARK pushbutton again and record new Row 1, Row 2, and Row 3 indications.

NOTE: Step 65 applies to Indicator Control panel 2021290 only.

65. Set OPTICS ZERO switch on Indicator Control panel to ZERO.

NOTE: Step 65A applies to all Indicator Control panels except 2021290.

65A. Set OPTICS MODE switch on Indicator Control panel to ZERO.

66. Press to extinguish OPTICS POWER ON pushbutton on Test Control panel.

CALCULATIONS

67. Perform the following calculations for hand controller drift rates:

a. Δ Shaft angle = step 64.a - step 63.a
b. Δ Trunnion angle = step 64.b - step 63.b

NOTE: If step 64.c is less than step 63.c, add 163.84 seconds to step 64.c.

c. Δ Time = step 64.c - step 63.c
d. Shaft drift rate = $\frac{\Delta \text{Shaft angle}}{\Delta \text{Time}}$
e. Trunnion drift rate = $\frac{\Delta \text{Trunnion angle}}{\Delta \text{Time}}$

REFERENCES PS-2015000

IMPORTANT Avoid repeated slewing of SXT shaft and trunnion axes into their mechanical stops.

INTERVAL

TOOLS AND MATERIAL

NOTE: Oscillograph Amplifier sensitivities stated herein are nominal and may be adjusted at the discretion of the operator.

INITIALIZATION

1. Perform JDC 12215 to establish a Master Initialization condition.

2. Press to light OPTICS POWER ON pushbutton on Test Control panel.

NOTE: Step 3 applies to Indicator Control panel 2021290 only.

3. Set switches on Indicator Control panel as follows:

a. OPTICS ZERO to OFF

b. OPTICS TEL TRUN to SLAVE TO SXT

c. OPTICS COUPLING to DIRECT

d. OPTICS MODE to MAN

e. OPTICS SPEED to HI

NOTE: Step 3A applies to all Indicator Control panels except 2021290.

3A. Set switches on Indicator Control panel as follows:

a. OPTICS MODE to MAN

b. OPTICS CONTROLLER SPEED to HI

c. OPTICS CONTROLLER COUPLING to DIRECT

d. OPTICS TRACKER to OFF

e. OPTICS TELESCOPE TRUNNION to SLAVE TO SXT

4. Insure CH4 AC, CH5 AC, CH6 AC, 800 ~ 0 PH REFERENCE, and OPT 800 ~ TO

VERIFICATION WITH SIDL REQUIRED BEFORE USE

DATE 30 JUN 66

PH GEN pushbuttons on Oscillograph Signal Selector panel are lighted.

5. Insure SCT TRUN, SXT SHAFT, and SXT TRUN switches on PSA Test Point Adapter are set to 1:1.

HIGH SPEED SLEW RATE

6. Set CHANNEL 2 switch on Oscillograph Signal Selector panel to 12 and CHANNEL 5 switch to 11 to monitor the following signals:

a. SXT Trunnion MDA Tach Mon. on CHANNEL 2

b. SCT Trunnion MDA Tach Mon. on CHANNEL 5

7. Set SCOPE "A" INPUT switch on Primary Signal Selector panel to SIG 2 and CROSSBAR CONTROL to 14 to monitor the SXT Trunnion MDA Output Mon. on Oscilloscope.

8. Press CHART SPEEDS 5 pushbutton on Oscillograph Control panel. Set CHANNEL 2 sensitivity on the Oscillograph Amplifier panel to 500 MV/MM and CHANNEL 5 sensitivity to 200 MV/MM.

NOTE: Step 9 applies to Indicator Control panel 2021290 only.

9. Set OPTICS ZERO switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS ZERO switch to OFF.

NOTE: Step 9A applies to all Indicator Control panels except 2021290.

9A. Set OPTICS MODE switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS MODE switch to MAN.

10. Start Oscillograph by setting CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

11. Measure and record the steady state peak to peak voltage indicated on the Oscilloscope while holding the Optics Hand Controller to the upper limit not longer than 10 seconds. Release the Optics Hand Controller and set CHART DRIVE switch to OFF. Set all sensitivities on Oscillograph Amplifier panel to OFF and record maximum steady state indications of CHANNELS 2 and 5.

12. Set CHANNEL 1 switch on Oscillograph Signal Selector panel to 13 to monitor the SCT Shaft MDA Tach Mon. signal on CHANNEL 1.

13. Set CHANNEL 1 sensitivity on Oscillograph Amplifier panel to 500 MV/MM.

14. Set SCOPE "A" INPUT switch on Primary Signal Selector panel to SIG 1 and CROSSBAR CONTROL to 14 to monitor the SXT Shaft MDA Output Mon. on Oscilloscope.

NOTE: Step 15 applies to Indicator Control panel 2021290 only.

15. Set OPTICS ZERO switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS ZERO switch to OFF.

DATE 30 JUN 66

NOTE: Step 15A applies to all Indicator Control panels except 2021290.

15A. Set OPTICS MODE switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS MODE switch to MAN.

16. Start the Oscillograph by setting CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

17. Measure and record the steady state peak to peak voltage indicated on the Oscilloscope while holding the Optics Hand Controller to the right limit not longer than 10 seconds. Release the Optics Hand Controller and set CHART DRIVE switch to OFF. Set all sensitivities on Oscillograph Amplifier panel to OFF and record the maximum steady state indications of CHANNEL 1.

18. Set the CHANNEL 1 switch on the Oscillograph Signal Selector panel to 12 to monitor the SXT Shaft MDA Tach Mon. voltage on CHANNEL 1.

19. Set CHANNEL 1 sensitivity to 500 mv/mm on the Oscillograph Amplifier panel.

20. Start the Oscillograph by setting the CHART DRIVE switch on the Oscillograph Control panel to MM/SEC.

21. Hold Optics Hand Controller to the left limit not longer than 10 seconds. Release Optics Hand Controller.

22. Stop Oscillograph and record maximum steady state indication on CHANNEL 1.

MEDIUM SPEED SLEW RATE

23. Set VOLTMETER INPUT PAVM switch on Primary Signal Selector panel to SIG 1 and CROSSBAR CONTROL to 05. Set PAVM FUNCTION selector to 0° to monitor in-phase voltage of the SCT Trunnion MDA Tach Mon.

NOTE: Step 24 applies to Indicator Control panel 2021290 only.

24. Set OPTICS ZERO switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS ZERO switch to OFF. Set OPTICS SPEED switch to MED.

NOTE: Step 24A applies to all Indicator Control panels except 2021290.

24A. Set OPTICS MODE switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS MODE switch to MAN. Set OPTICS CONTROLLER SPEED switch to MED.

25. Measure and record the voltage indicated on the PAVM while holding the Optics Hand Controller to the upper limit not longer than 20 seconds. Release the Optics hand controller.

26. Set CHANNEL 5 switch to 11 on Oscillograph Signal Selector panel to monitor the SCT Trunnion MDA TACH Mon.

27. Set VOLTMETER INPUT PAVM switch on Primary Signal Selector panel SIG 2 and CROSSBAR CONTROL to 09 to monitor the SXT Trunnion MDA TACH Mon.

DATE 30 JUN 66

---

28. Set CHANNEL 5 sensitivity to 10 MV/MM on Oscillograph Amplifier panel. Press CHART SPEEDS 20 pushbutton on the Oscillograph Control Panel and set CHART DRIVE switch to MM/SEC.

29. Measure and record the voltage indicated on the PAVM while holding the Optics Hand Controller to the lower limit not longer than 20 seconds. Release the Optics Hand Controller and set CHART DRIVE switch to OFF. Set all sensitivities on Oscillograph Amplifier panel to OFF and record steady state indication of CHANNEL 5 per Figure 1. Record maximum width of any pulses at 1/2 positive peak or 1/2 negative peak points on CHANNEL 5 per Figure 1. If no pulses occur, write none on the data sheet.

30. Deleted.

31. Set VOLTMETER INPUT PAVM switch on Primary Signal Selector panel to SIG 2 and CROSSBAR CONTROL to 04 to monitor the SCT Shaft MDA Tach Mon.

NOTE: Step 32 applies to Indicator Control panel 2021290 only.

32. Set OPTICS ZERO switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS ZERO switch to OFF.

NOTE: Step 32A applies to all Indicator Control panels except 2021290.

32A. Set OPTICS MODE switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS MODE switch to MAN.

33. Measure and record the voltage indicated on the PAVM while holding the Optics Hand Controller to the right limit not longer than 20 seconds. Release the Optics Hand Controller.

34. Set CHANNEL 1 switch to 13 on Oscillograph Signal Selector panel to monitor the SCT Shaft MDA TACH Mon.

35. Set VOLTMETER INPUT PAVM switch on Primary Signal Selector panel to SIG 2 and CROSSBAR CONTROL to 07 to monitor the SXT Shaft MDA Tach Mon.

36. Set CHANNEL 1 sensitivity to 20 MV/MM on Oscillograph Amplifier panel and set CHART DRIVE switch to MM/SEC.

37. Measure and record the voltage indicated on the PAVM while holding the Optics Hand Controller to the left limit not longer than 20 seconds. Release the Optics Hand Controller and set CHART DRIVE switch to OFF. Set all sensitivities on Oscillograph Amplifier panel to OFF and record steady state indication of CHANNEL 1 per Figure 1. Record maximum width of any pulses at 1/2 positive peak or 1/2 negative peak points on CHANNEL 1 per Figure 1. If no pulses occur, write none on the data sheet.

LOW SPEED SLEW RATE

38. Set VOLTMETER INPUT PAVM switch on Primary Signal Selector panel to SIG 2 and CROSSBAR CONTROL to 06 to monitor the CDU Trunnion Fine Error.

39. Set the DEGREES dial on the PAVM to 50.

DATE 30 JUN 66

NOTE: Step 40 applies to
Indicator Control panel
2021290 only.

40. Set OPTICS ZERO switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS ZERO switch to OFF. Set OPTICS SPEED switch to LO.

NOTE: Step 40A applies
to all Indicator Control
panels except 2021290.

40A. Set OPTICS MODE switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS MODE switch to MAN. Set OPTICS CONTROLLER SPEED switch to LO.

41. Measure and record the voltage indicated on the PAVM while optics is slewing by holding Optics Hand Controller to the lower limit. Continue holding Optics Hand Controller to the lower limit until SXT is against Trunnion stop as indicated by a nominal (unchanging) value on the Trunnion TPAC and continue holding Optics Hand Controller to lower limit.

42. Set VOLTMETER INPUT PAVM switch on Primary Signal Selector panel to SIG 1 and CROSSBAR CONTROL to 06. Set the DEGREES dial on the PAVM to 0. Measure and record the SXT Trun MDA P/A voltage indicated on PAVM. Release Optics Hand Controller.

43. Set VOLTMETER INPUT PAVM switch to SIG 1 and CROSSBAR CONTROL to 05 to monitor the SCT Trunnion MDA Tach Mon.

44. Set the CHANNEL 2 switch to 12 and the CHANNEL 5 switch to 11 on the Oscillograph Signal Selector panel to monitor:

a. SXT Trun MDA Tach Mon. on CHANNEL 2
b. SCT Trun MDA Tach Mon. on CHANNEL 5

45. Set CHANNEL 2 sensitivity to 10 MV/MM and CHANNEL 5 sensitivity to 5 MV/MM on Oscillograph Amplifier panel and set CHART DRIVE switch to MM/SEC.

46. Measure and record the steady state voltage indicated on the PAVM while holding the Optics Hand Controller to the upper limit until the SXT Trunnion reaches 85° LOS as indicated by the Trunnion TPAC. Release the Optics Hand Controller.

47. Set CHART DRIVE switch on Oscillograph Control panel to OFF. Set all sensitivities on Oscillograph Amplifier to OFF. Record steady state indication of CHANNELS 2 and 5 per Figure 1. Record maximum width of any pulses at 1/2 positive peak or 1/2 negative peak points on CHANNELS 2 and 5 per Figure 1.

47A. Measure and record the steady state voltage indicated on PAVM while holding Optics Hand Controller to lower limit. Release Optics Hand Controller.

47B. Add the absolute value recorded in step 46 to the absolute value recorded in step 47A and divide by two. Record results as average value of SCT Trun MDA Tach Mon.

48. Set CHANNEL 1 switch on Oscillograph Signal Selector panel to 12 to monitor SXT Shaft MDA Tach Mon. signal on CHANNEL 1.

49. Set VOLTMETER INPUT PAVM switch on Primary Signal Selector panel to SIG 2 and CROSSBAR CONTROL to 05 to monitor the CDU Shaft Fine Error.

50. Set CHANNEL 1 sensitivity on Oscillograph Amplifier panel to 10 MV/MM.

NOTE: Step 51 applies to
Indicator Control panel
2021290 only.

51. Set OPTICS ZERO switch on Indicator Control Panel to ZERO. After 20 seconds, set OPTICS ZERO switch to OFF.

NOTE: Step 51A applies
to all Indicator Control
panels except 2021290.

51A. Set OPTICS MODE switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS MODE switch to MAN.

52. Start Oscillograph by setting CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

53. Measure and record voltage indicated on PAVM while optics is slewing by holding Optics Hand Controller to right limit. Continue holding Optics Hand Controller to right limit until SXT is against Shaft stop as indicated by a nominal (unchanging) value of +270° on the Shaft TPAC. Set CHART DRIVE switch to OFF and continue holding the Optics Hand Controller to right limit.

54. Set VOLTMETER INPUT PAVM switch on Primary Signal Selector panel to SIG 2 and the CROSSBAR CONTROL to 03. Measure and record the SXT Shaft MDA P/A voltage on the PAVM. Release the Optics Hand Controller.

55. Set all sensitivities on Oscillograph Amplifier panel to OFF and record steady state indication of CHANNEL 1 per Figure 1. Record maximum width of any pulses at 1/2 positive peak or 1/2 negative peak points of CHANNEL 1 per Figure 1.

56. Set the CHANNEL 1 switch on the Oscillograph Signal Selector panel to 13 to monitor the SCT Shaft MDA Tach Mon. on CHANNEL 1 of the Oscillograph.

57. Set the CHANNEL 1 sensitivity control on the Oscillograph Amplifier panel to 5 MV/MM and set the CHART DRIVE switch on the Oscillograph Control panel to MM/SEC.

58. Hold Optics Hand Controller to left limit until SXT is against Shaft stop as indicated by a nominal (unchanging) value of approximately +90° on the Shaft TPAC. Release Optics Hand Controller and set the CHART DRIVE switch to OFF.

59. Set the CHANNEL 1 sensitivity control on the Oscillograph Amplifier panel to OFF and record the maximum steady state indication on CHANNEL 1. Record maximum width of any pulses at 1/2 positive peak or 1/2 negative peak points of CHANNEL 1 per Figure 1.

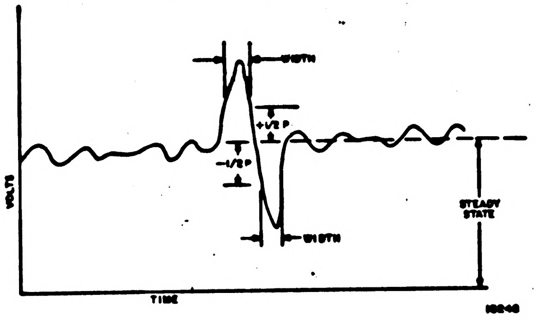

Figure 1. Signal Characteristics Diagram

NOTE: Step 60 applies to
Indicator Control panel
2021290 only.

60. Set OPTICS ZERO switch on Indicator Control panel to ZERO. Wait 20 seconds before proceeding.

NOTE: Step 60A applies
to all Indicator Control
panels except 2021290.

60A. Set OPTICS MODE switch on Indicator Control panel to ZERO. Wait 20 seconds before proceeding.

61. Set CROSSBAR CONTROL on Primary Signal Selector panel to the following positions and measure the quadrature voltage indicated on the PAVM.

Signal	CROSSBAR CONTROL
a. SCT Trun MDA P/A Mon.	103
b. SXT Shaft MDA P/A Mon.	203
c. SXT Trun MDA P/A Mon.	106
d. SCT Shaft MDA P/A Mon.	210

NOTE: Step 62 applies to
Indicator Control panel
2021290 only.

62. Set OPTICS ZERO switch on Indicator Control panel to OFF.

NOTE: Step 62A applies to
all Indicator Control panels
except 2021290.

62A. Set OPTICS MODE switch on Indicator Control panel to MAN.

63. Press MARK pushbutton. Observe DSKY displays VERB 06 NOUN 56 and data in the following form:

a. Row 1 = ±XXX.XX (Shaft angle in degrees)
b. Row 2 = ±XX.XXX (Trunnion angle in degrees)
c. Row 3 = XXX.XX (Time in seconds)

Record Row 1, Row 2, and Row 3 indications.

64. Approximately 60 seconds after first mark, press MARK pushbutton again and record new Row 1, Row 2, and Row 3 indications.

NOTE: Step 65 applies to
Indicator Control panel
2021290 only.

65. Set OPTICS ZERO switch on Indicator Control panel to ZERO.

NOTE: Step 65A applies to
all Indicator Control panels
except 2021290.

65A. Set OPTICS MODE switch on Indicator Control panel to ZERO.

66. Press to extinguish OPTICS POWER ON pushbutton on Test Control panel.

CALCULATIONS

67. Perform the following calculations for hand controller drift rates:

a. Δ Shaft angle = step 64.a - step 63.a
b. Δ Trunnion angle = step 64.b - step 63.b

NOTE: If step 64.c is less
than step 63.c, add 163.84
seconds to step 64.c.

c. Δ Time = step 64.c - step 63.c
d. Shaft drift rate = $\frac{\Delta \text{Shaft angle}}{\Delta \text{Time}}$
e. Trunnion drift rate = $\frac{\Delta \text{Trunnion angle}}{\Delta \text{Time}}$

IMPORTANT Avoid slewing of SXT shaft and trunnion axes into their mechanical stops.

INTERVAL

TOOLS AND MATERIAL

NOTE: Oscillograph Amplifier sensitivities stated herein are nominal and may be adjusted at the discretion of the operator.

INITIALIZATION

1. Perform JDC 12215 to establish a Master Initialization condition.

2. Press to light OPTICS POWER ON pushbutton on Test Control panel.

NOTE: Step 3 applies to Indicator Control panel 2021290 only.

3. Set switches on Indicator Control panel as follows:

a. OPTICS ZERO to OFF

b. OPTICS TEL TRUN to SLAVE TO SXT

c. OPTICS COUPLING to DIRECT

d. OPTICS MODE to MAN

e. OPTICS SPEED to HI

NOTE: Step 3A applies to all Indicator Control panels except 2021290.

3A. Set switches on Indicator Control panel as follows:

a. OPTICS MODE to MAN

b. OPTICS CONTROLLER SPEED to HI

c. OPTICS CONTROLLER COUPLING to DIRECT

d. OPTICS TRACKER to OFF

e. OPTICS TELESCOPE TRUNNION to SLAVE TO SXT

4. Insure CH4 AC, CH5 AC, CH6 AC, 800 ~ 0 PH REFERENCE, and OPT 800 ~ TO PH GEN pushbuttons on Oscillograph Signal Selector panel are lighted.

VERIFICATION WITH SIDL REQUIRED BEFORE USE

5. Insure SCT TRUN, SXT SHAFT, and SXT TRUN switches on PSA Test Point Adapter are set to 1:1.

HIGH SPEED SLEW RATE

6. Set CHANNEL 2 switch on Oscillograph Signal Selector panel to 12 and CHANNEL 5 switch to 11 to monitor the following signals:

a. SXT Trunnion MDA Tach Mon. on CHANNEL 2

b. SCT Trunnion MDA Tach Mon. on CHANNEL 5

7. Set SCOPE "A" INPUT switch on Primary Signal Selector panel to SIG 2 and CROSSBAR CONTROL to 14 to monitor the SXT Trunnion MDA Output Mon. on Oscilloscope.

8. Press CHART SPEEDS 5 pushbutton on Oscillograph Control panel. Set CHANNEL 2 sensitivity on the Oscillograph Amplifier panel to 500 MV/MM and CHANNEL 5 sensitivity to 200 MV/MM.

NOTE: Step 9 applies to Indicator Control panel 2021290 only.

9. Set OPTICS ZERO switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS ZERO switch to OFF.

NOTE: Step 9A applies to all Indicator Control panels except 2021290.

9A. Set OPTICS MODE switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS MODE switch to MAN.

10. Start Oscillograph by setting CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

11. Measure and record the steady state peak to peak voltage indicated on the Oscilloscope while holding the Optics Hand Controller to the upper limit not longer than 5 seconds. Release the Optics Hand Controller and set CHART DRIVE switch to OFF. Set all sensitivities on Oscillograph Amplifier panel to OFF and record maximum steady state indications of CHANNELS 2 and 5.

12. Set CHANNEL 1 switch on Oscillograph Signal Selector panel to 13 to monitor the SCT Shaft MDA Tach Mon. signal on CHANNEL 1.

13. Set CHANNEL 1 sensitivity on Oscillograph Amplifier panel to 500 MV/MM.

14. Set SCOPE "A" INPUT switch on Primary Signal Selector panel to SIG 1 and CROSSBAR CONTROL to 14 to monitor the SXT Shaft MDA Output Mon. on Oscilloscope.

14A. Using the Optics Hand Controller, position the SXT Trunnion between 0° and 10° as indicated by the Trunnion TPAC.

NOTE: Step 15 applies to Indicator Control panel 2021290 only.

15. Set OPTICS ZERO switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS ZERO switch to OFF.

NOTE: Step 15A applies to all Indicator Control panels except 2021290.

15A. Set OPTICS MODE switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS MODE switch to MAN.

16. Start the Oscillograph by setting CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

17. Measure and record the steady state peak to peak voltage indicated on the Oscilloscope while holding the Optics Hand Controller to the right limit not longer than 10 seconds. Release the Optics Hand Controller and set CHART DRIVE switch to OFF. Set all sensitivities on Oscillograph Amplifier panel to OFF and record the maximum steady state indications of CHANNEL 1.

18. Set the CHANNEL 1 switch on the Oscillograph Signal Selector panel to 12 to monitor the SXT Shaft MDA Tach Mon. voltage on CHANNEL 1.

19. Set CHANNEL 1 sensitivity to 500 mv/mm on the Oscillograph Amplifier panel.

20. Start the Oscillograph by setting the CHART DRIVE switch on the Oscillograph Control panel to MM/SEC.

21. Hold Optics Hand Controller to the left limit not longer than 10 seconds. Release Optics Hand Controller.

22. Stop Oscillograph and record maximum steady state indication on CHANNEL 1.

MEDIUM SPEED SLEW RATE

23. Set VOLTMETER INPUT PAVM switch on Primary Signal Selector panel to SIG 1 and CROSSBAR CONTROL to 05. Set PAVM FUNCTION selector to 0° to monitor in-phase voltage of the SCT Trunnion MDA Tach Mon.

NOTE: Step 24 applies to Indicator Control panel 2021290 only.

24. Set OPTICS ZERO switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS ZERO switch to OFF. Set OPTICS SPEED switch to MED.

NOTE: Step 24A applies to all Indicator Control panels except 2021290.

24A. Set OPTICS MODE switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS MODE switch to MAN. Set OPTICS CONTROLLER SPEED switch to MED.

25. Measure and record the voltage indicated on the PAVM while holding the Optics Hand Controller to the upper limit not longer than 20 seconds. Release the Optics hand controller.

26. Set CHANNEL 5 switch to 11 on Oscillograph Signal Selector panel to monitor the SCT Trunnion MDA TACH Mon.

27. Set VOLTMETER INPUT PAVM switch on Primary Signal Selector panel SIG 2 and CROSSBAR CONTROL to 09 to monitor the SXT Trunnion MDA TACH Mon.

28. Set CHANNEL 5 sensitivity to 10 MV/MM on Oscillograph Amplifier panel. Press CHART SPEEDS 20 pushbutton on the Oscillograph Control Panel and set CHART DRIVE switch to MM/SEC.

29. Measure and record the voltage indicated on the PAVM while holding the Optics Hand Controller to the lower limit not longer than 20 seconds. Release the Optics Hand Controller and set CHART DRIVE switch to OFF. Set all sensitivities on Oscillograph Amplifier panel to OFF and record steady state indication of CHANNEL 5 per Figure 1. Record maximum width of any pulses at 1/2 positive peak or 1/2 negative peak points on CHANNEL 5 per Figure 1. If no pulses occur, write none on the data sheet.

30. Deleted.

31. Set VOLTMETER INPUT PAVM switch on Primary Signal Selector panel to SIG 2 and CROSSBAR CONTROL to 04 to monitor the SCT Shaft MDA Tach Mon.

NOTE: Step 32 applies to Indicator Control panel 2021290 only.

32. Set OPTICS ZERO switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS ZERO switch to OFF.

NOTE: Step 32A applies to all Indicator Control panels except 2021290.

32A. Set OPTICS MODE switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS MODE switch to MAN.

33. Measure and record the voltage indicated on the PAVM while holding the Optics Hand Controller to the right limit not longer than 20 seconds. Release the Optics Hand Controller.

34. Set CHANNEL 1 switch to 13 on Oscillograph Signal Selector panel to monitor the SCT Shaft MDA TACH Mon.

35. Set VOLTMETER INPUT PAVM switch on Primary Signal Selector panel to SIG 2 and CROSSBAR CONTROL to 07 to monitor the SXT Shaft MDA Tach Mon.

36. Set CHANNEL 1 sensitivity to 20 MV/MM on Oscillograph Amplifier panel and set CHART DRIVE switch to MM/SEC.

37. Measure and record the voltage indicated on the PAVM while holding the Optics Hand Controller to the left limit not longer than 20 seconds. Release the Optics Hand Controller and set CHART DRIVE switch to OFF. Set all sensitivities on Oscillograph Amplifier panel to OFF and record steady state indication of CHANNEL 1 per Figure 1. Record maximum width of any pulses at 1/2 positive peak or 1/2 negative peak points on CHANNEL 1 per Figure 1. If no pulses occur, write none on the data sheet.

LOW SPEED SLEW RATE

38. Set VOLTMETER INPUT PAVM switch on Primary Signal Selector panel to SIG 2 and CROSSBAR CONTROL to 06 to monitor the CDU Trunnion Fine Error.

39. Set the DEGREES dial on the PAVM to 50.

NOTE: Step 40 applies to
Indicator Control panel
2021290 only.

40. Set OPTICS ZERO switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS ZERO switch to OFF. Set OPTICS SPEED switch to LO.

NOTE: Step 40A applies
to all Indicator Control
panels except 2021290.

40A. Set OPTICS MODE switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS MODE switch to MAN. Set OPTICS CONTROLLER SPEED switch to LO.

41. Measure and record the steady state voltage indicated on the PAVM while holding Optics Hand Controller to the upper limit.

42. Release Optics Hand Controller. Set the DEGREES dial on the PAVM to 0.

43. Set VOLTMETER INPUT PAVM switch to SIG 1 and CROSSBAR CONTROL to 06 to monitor the SCT Trunnion MDA Tach Mon.

44. Set the CHANNEL 2 switch to 12 and the CHANNEL 5 switch to 11 on the Oscillograph Signal Selector panel to monitor:

a. SXT Trun MDA Tach Mon. on CHANNEL 2

b. SCT Trun MDA Tach Mon. on CHANNEL 5

45. Set CHANNEL 2 sensitivity to 10 MV/MM and CHANNEL 5 sensitivity to 5 MV/MM on Oscillograph Amplifier panel and set CHART DRIVE switch to MM/SEC.

46. Measure and record the steady state voltage indicated on the PAVM while holding the Optics Hand Controller to the upper limit until the SXT Trunnion reaches 85° LOS as indicated by the Trunnion TPAC. Release the Optics Hand Controller.

47. Set CHART DRIVE switch on Oscillograph Control panel to OFF. Set all sensitivities on Oscillograph Amplifier to OFF. Record steady state indication of CHANNELS 2 and 5 per Figure 1. Record maximum width of any pulses at 1/2 positive peak or 1/2 negative peak points on CHANNELS 2 and 5 per Figure 1.

47A. Measure and record the steady state voltage indicated on PAVM while holding Optics Hand Controller to lower limit. Release Optics Hand Controller.

47B. Add the absolute value recorded in step 46 to the absolute value recorded in step 47A and divide by two. Record results as average value of SCT Trun MDA Tach Mon.

48. Set CHANNEL 1 switch on Oscillograph Signal Selector panel to 12 to monitor SXT Shaft MDA Tach Mon. signal on CHANNEL 1.

---

49. Set VOLTMETER INPUT PAVM switch on Primary Signal Selector panel to SIG 2 and CROSSBAR CONTROL to 05 to monitor the CDU Shaft Fine Error.

50. Using the Optics Hand Controller with the OPTICS SPEED switch set to HI, position the SXT Trunnion between 0° and 10° as indicated by the Trunnion TPAC.

NOTE: Step 51 applies
to Indicator Control
panel 2021290 only.

51. Set OPTICS ZERO switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS ZERO switch to OFF.

NOTE: Step 51A applies
to all Indicator Control
panels except 2021290.

51A. Set OPTICS MODE switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS MODE switch to MAN.

52. Connect the PSA TPA #2 output TB3-32 (RED) HI and TB3-28 (BLK) LO to the Buffered Probe input J7 HI and J8 LO.

53. On the AUX INPUT PANEL, connect the Buffered Probe output to the Channel 3 AC input, to monitor the SCT Shaft MDA TACH Mon. signal on CHANNEL 3. Set the CHANNEL 3 switch on the AUX INPUT PANEL to OSS 800 cps.

54. Set CHANNEL 1 sensitivity to 10 MV/MM and CHANNEL 3 sensitivity to 5 MV/MM on Oscillograph Amplifier panel.

55. Holding the Optics Hand Controller to the left with the OPTICS SPEED switch set to HI, position the SXT Shaft to (-180° ± 1°) indicated by the Shaft TPAC. Return the OPTICS SPEED SWITCH to LO.

56. Start the Oscillograph by setting CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

57. Measure and record the steady state voltage indicated on the PAVM while holding the Optics Hand Controller to right limit. Continue holding Optics Hand Controller to right limit until SXT Shaft reaches +180° as indicated by the Shaft TPAC.

58. Release the Optics Hand Controller and set CHART DRIVE switch to OFF.

59. Set all sensitivities on Oscillograph Amplifier panel to OFF and record steady state indications of CHANNEL 1 and CHANNEL 3 per Figure 1. Record the maximum width of any pulses at 1/2 positive peak or 1/2 negative peak points of CHANNEL 1 and CHANNEL 3 per Figure 1.

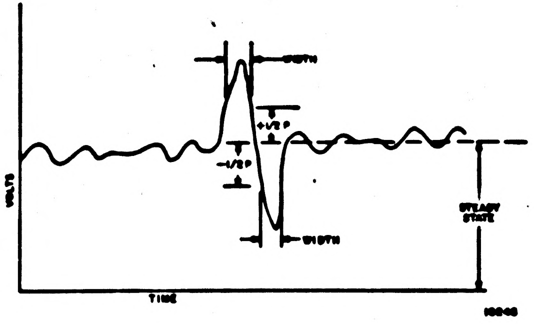

Figure 1. Signal Characteristics Diagram

NOTE: Step 60 applies to
Indicator Control panel
2021290 only.

60. Set OPTICS ZERO switch on Indicator Control panel to ZERO. Wait 20 seconds before proceeding.

NOTE: Step 60A applies
to all Indicator Control
panels except 2021290.

60A. Set OPTICS MODE switch on Indicator Control panel to ZERO. Wait 20 seconds before proceeding.

61. Set CROSSBAR CONTROL on Primary Signal Selector panel to the following positions and measure the quadrature voltage indicated on the PAVM.

	Signal	CROSSBAR CONTROL
a.	SCT Trun MDA P/A Mon.	103
b.	SXT Shaft MDA P/A Mon.	203
c.	SXT Trun MDA P/A Mon.	106
d.	SCT Shaft MDA P/A Mon.	210

NOTE: Step 62 applies to
Indicator Control panel
2021290 only.

62. Set OPTICS ZERO switch on Indicator Control panel to OFF.

NOTE: Step 62A applies to
all Indicator Control panels
except 2021290.

62A. Set OPTICS MODE switch on Indicator Control panel to MAN.

63. Press MARK pushbutton. Observe DSKY displays VERB 06 NOUN 56 and data in the following form:

a. Row 1 = ±XXX.XX (Shaft angle in degrees)

b. Row 2 = ±XX.XXX (Trunnion angle in degrees)

c. Row 3 = XXX.XX (Time in seconds)

Record Row 1, Row 2, and Row 3 indications.

64. Approximately 60 seconds after first mark, press MARK pushbutton again and record new Row 1, Row 2, and Row 3 indications.

NOTE: Step 65 applies to
Indicator Control panel
2021290 only.

65. Set OPTICS ZERO switch on Indicator Control panel to ZERO.

NOTE: Step 65A applies to
all Indicator Control panels
except 2021290.

65A. Set OPTICS MODE switch on Indicator Control panel to ZERO.

66. Press to extinguish OPTICS POWER ON pushbutton on Test Control panel.

CALCULATIONS

67. Perform the following calculations for hand controller drift rates:

a. Δ Shaft angle = step 64.a - step 63.a

b. Δ Trunnion angle = step 64.b - step 63.b

NOTE: If step 64.c is less
than step 63.c, add 163.84
seconds to step 64.c.

c. Δ Time = step 64.c - step 63.c

d. Shaft drift rate = $\frac{\Delta \text{Shaft angle}}{\Delta \text{Time}}$

e. Trunnion drift rate = $\frac{\Delta \text{Trunnion angle}}{\Delta \text{Time}}$

IMPORTANT Avoid slewing of SXT shaft and trunnion axes into their mechanical stops

INTERVAL

TOOLS AND MATERIAL

NOTE: 1. The G & N Mounting Fixture shall be set at the 90.0° position.

2. Oscilloscope Amplifier sensitivities stated herein are nominal and may be adjusted at the discretion of the operator.

INITIALIZATION

1. Perform JDC 12215 to establish a Master Initialization condition.

2. Press to light OPTICS POWER ON pushbutton on Test Control panel.

NOTE: Step 3 applies
to Indicator Control
panel 2021290 only.

3. Set switches on Indicator Control panel as follows:

a. OPTICS ZERO to OFF
b. OPTICS TEL TRUN to SLAVE TO SXT
c. OPTICS COUPLING to DIRECT
d. OPTICS MODE to MAN
e. OPTICS SPEED to HI

NOTE: Step 3A applies to
all Indicator Control panels
except 2021290.

3A. Set switches on Indicator Control panel as follows:

a. OPTICS MODE to MAN
b. OPTICS CONTROLLER SPEED to HI
c. OPTICS CONTROLLER COUPLING to DIRECT
d. OPTICS TRACKER to OFF
e. OPTICS TELESCOPE TRUNNION to SLAVE TO SXT

4. Insure CH4 AC, CH5 AC, CH6 AC, 800 ~ 0 PH REFERENCE, and OPT 800 ~ TO

VERIFICATION WITH SIOL REQUIRED BEFORE USE

JOB OPTICS SLEW RATE TEST

JDC 12213 REV 8 PAGE 2 OF 8

SUBSYSTEM G AND N SYSTEM

ASSY

PH GEN pushbuttons on Oscillograph Signal Selector panel are lighted.

5. Insure SCT TRUN, SXT SHAFT, and SXT TRUN switches on PSA Test Point Adapter are set to 1:1.

HIGH SPEED SLEW RATE

6. Set CHANNEL 2 switch on Oscillograph Signal Selector panel to 12 and CHANNEL 5 switch to 11 to monitor the following signals:

a. SXT Trunnion MDA Tach Mon. on CHANNEL 2
b. SCT Trunnion MDA Tach Mon. on CHANNEL 5

7. Set SCOPE "A" INPUT switch on Primary Signal Selector panel to SIG 2 and CROSSBAR CONTROL to 14 to monitor the SXT Trunnion MDA Output Mon. on Oscilloscope.

8. Press CHART SPEEDS 5 pushbutton on Oscillograph Control panel. Set CHANNEL 2 sensitivity on the Oscillograph Amplifier panel to 500 MV/MM and CHANNEL 5 sensitivity to 200 MV/MM.

NOTE: Step 9 applies to
Indicator Control panel
2021290 only.

9. Set OPTICS ZERO switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS ZERO switch to OFF.

NOTE: Step 9A applies to
all Indicator Control
panels except 2021290.

9A. Set OPTICS MODE switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS MODE switch to MAN.

10. Start Oscillograph by setting CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

11. Measure and record the steady state peak to peak voltage indicated on the Oscilloscope while holding the Optics Hand Controller to the upper limit not longer than 5 seconds. Release the Optics Hand Controller and set CHART DRIVE switch to OFF. Set all sensitivities on Oscillograph Amplifier panel to OFF and record maximum steady state indications of CHANNELS 2 and 5.

12. Set CHANNEL 1 switch on Oscillograph Signal Selector panel to 13 to monitor the SCT Shaft MDA Tach Mon. signal on CHANNEL 1.

13. Set CHANNEL 1 sensitivity on Oscillograph Amplifier panel to 500 MV/MM.

14. Set SCOPE "A" INPUT switch on Primary Signal Selector panel to SIG 1 and CROSSBAR CONTROL to 14 to monitor the SXT Shaft MDA Output Mon. on Oscilloscope.

14A. Using the Optics Hand Controller, position the SXT Trunnion between 0° and 10° as indicated by the Trunnion TPAC.

NOTE: Step 15 applies to
Indicator Control panel
2021290 only.

15. Set OPTICS ZERO switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS ZERO switch to OFF.

DATE 30 JUN 66

JDC 12213 REV 8 PAGE 3 OF 8

SUBSYSTEM G AND N SYSTEM

ASSY

NOTE: Step 15A applies to
all Indicator Control panels
except 2021290.

15A. Set OPTICS MODE switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS MODE switch to MAN.

16. Start the Oscillograph by setting CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

17. Measure and record the steady state peak to peak voltage indicated on the Oscilloscope while holding the Optics Hand Controller to the right limit not longer than 10 seconds. Release the Optics Hand Controller and set CHART DRIVE switch to OFF. Set all sensitivities on Oscillograph Amplifier panel to OFF and record the maximum steady state indications of CHANNEL 1.

18. Set the CHANNEL 1 switch on the Oscillograph Signal Selector panel to 12 to monitor the SXT Shaft MDA Tach Mon. voltage on CHANNEL 1.

19. Set CHANNEL 1 sensitivity to 500 mv/mm on the Oscillograph Amplifier panel.

20. Start the Oscillograph by setting the CHART DRIVE switch on the Oscillograph Control panel to MM/SEC.

21. Hold Optics Hand Controller to the left limit not longer than 10 seconds. Release Optics Hand Controller.

22. Stop Oscillograph and record maximum steady state indication on CHANNEL 1.

MEDIUM SPEED SLEW RATE

23. Set VOLTMETER INPUT PAVM switch on Primary Signal Selector panel to SIG 1 and CROSSBAR CONTROL to 05. Set PAVM FUNCTION selector to 0° to monitor in-phase voltage of the SCT Trunnion MDA Tach Mon.

NOTE: Step 24 applies to
Indicator Control panel
2021290 only.

24. Set OPTICS ZERO switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS ZERO switch to OFF. Set OPTICS SPEED switch to MED.

NOTE: Step 24A applies to
all Indicator Control
panels except 2021290.

24A. Set OPTICS MODE switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS MODE switch to MAN. Set OPTICS CONTROLLER SPEED switch to MED.

25. Measure and record the voltage indicated on the PAVM while holding the Optics Hand Controller to the upper limit not longer than 20 seconds. Release the Optics hand controller.

26. Set CHANNEL 5 switch to 11 on Oscillograph Signal Selector panel to monitor the SCT Trunnion MDA TACH Mon.

27. Set VOLTMETER INPUT PAVM switch on Primary Signal Selector panel SIG 2 and CROSSBAR CONTROL to 09 to monitor the SXT Trunnion MDA TACH Mon.

DATE 30 JUN 66

SUBSYSTEM G AND N SYSTEM

ASSY

28. Set CHANNEL 5 sensitivity to 10 MV/MM on Oscillograph Amplifier panel. Press CHART SPEEDS 20 pushbutton on the Oscillograph Control Panel and set CHART DRIVE switch to MM/SEC.

29. Measure and record the voltage indicated on the PAVM while holding the Optics Hand Controller to the lower limit not longer than 20 seconds. Release the Optics Hand Controller and set CHART DRIVE switch to OFF. Set all sensitivities on Oscillograph Amplifier panel to OFF and record steady state indication of CHANNEL 5 per Figure 1. Record maximum width of any pulses at 1/2 positive peak or 1/2 negative peak points on CHANNEL 5 per Figure 1. If no pulses occur, write none on the data sheet.

30. Deleted.

31. Set VOLTMETER INPUT PAVM switch on Primary Signal Selector panel to SIG 2 and CROSSBAR CONTROL to 04 to monitor the SCT Shaft MDA Tach Mon.

NOTE: Step 32 applies to
Indicator Control panel
2021290 only.

32. Set OPTICS ZERO switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS ZERO switch to OFF.

NOTE: Step 32A applies to
all Indicator Control panels
except 2021290.

32A. Set OPTICS MODE switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS MODE switch to MAN.

33. Measure and record the voltage indicated on the PAVM while holding the Optics Hand Controller to the right limit not longer than 20 seconds. Release the Optics Hand Controller.

34. Set CHANNEL 1 switch to 13 on Oscillograph Signal Selector panel to monitor the SCT Shaft MDA TACH Mon.

35. Set VOLTMETER INPUT PAVM switch on Primary Signal Selector panel to SIG 2 and CROSSBAR CONTROL to 07 to monitor the SXT Shaft MDA Tach Mon.

36. Set CHANNEL 1 sensitivity to 20 MV/MM on Oscillograph Amplifier panel and set CHART DRIVE switch to MM/SEC.

37. Measure and record the voltage indicated on the PAVM while holding the Optics Hand Controller to the left limit not longer than 20 seconds. Release the Optics Hand Controller and set CHART DRIVE switch to OFF. Set all sensitivities on Oscillograph Amplifier panel to OFF and record steady state indication of CHANNEL 1 per Figure 1. Record maximum width of any pulses at 1/2 positive peak or 1/2 negative peak points on CHANNEL 1 per Figure 1. If no pulses occur, write none on the data sheet.

LOW SPEED SLEW RATE

38. Set VOLTMETER INPUT PAVM switch on Primary Signal Selector panel to SIG 2 and CROSSBAR CONTROL to 06 to monitor the CDU Trunnion Fine Error.

39. Set the DEGREES dial on the PAVM to 50.

DATE 30 JUN 66

NOTE: Step 40 applies to Indicator Control panel 2021290 only.

40. Set OPTICS ZERO switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS ZERO switch to OFF. Set OPTICS SPEED switch to LO.

NOTE: Step 40A applies to all Indicator Control panels except 2021290.

40A. Set OPTICS MODE switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS MODE switch to MAN. Set OPTICS CONTROLLER SPEED switch to LO.

41. Measure and record the steady state voltage indicated on the PAVM while holding Optics Hand Controller to the upper limit.

42. Release Optics Hand Controller. Set the DEGREES dial on the PAVM to 0.

43. Set VOLTMETER INPUT PAVM switch to SIG 1 and CROSSBAR CONTROL to 06 to monitor the SCT Trunnion MDA Tach Mon.

44. Set the CHANNEL 2 switch to 12 and the CHANNEL 5 switch to 11 on the Oscillograph Signal Selector panel to monitor:

a. SXT Trun MDA Tach Mon. on CHANNEL 2

b. SCT Trun MDA Tach Mon. on CHANNEL 5

45. Set CHANNEL 2 sensitivity to 10 MV/MM and CHANNEL 5 sensitivity to 5 MV/MM on Oscillograph Amplifier panel and set CHART DRIVE switch to MM/SEC.

46. Measure and record the steady state voltage indicated on the PAVM while holding the Optics Hand Controller to the upper limit until the SXT Trunnion reaches 85° LOS as indicated by the Trunnion TPAC. Release the Optics Hand Controller.

47. Set CHART DRIVE switch on Oscillograph Control panel to OFF. Set all sensitivities on Oscillograph Amplifier to OFF. Record steady state indication of CHANNELS 2 and 5 per Figure 1. Record maximum width of any pulses at 1/2 positive peak or 1/2 negative peak points on CHANNELS 2 and 5 per Figure 1.

47A. Measure and record the steady state voltage indicated on PAVM while holding Optics Hand Controller to lower limit. Release Optics Hand Controller.

47B. Add the absolute value recorded in step 46 to the absolute value recorded in step 47A and divide by two. Record results as average value of SCT Trun MDA Tach Mon.

48. Set CHANNEL 1 switch on Oscillograph Signal Selector panel to 12 to monitor SXT Shaft MDA Tach Mon. signal on CHANNEL 1.

---

49. Set VOLTMETER INPUT PAVM switch on Primary Signal Selector panel to SIG 2 and CROSSBAR CONTROL to 05 to monitor the CDU Shaft Fine Error.

50. Using the Optics Hand Controller with the OPTICS SPEED switch set to HI, position the SXT Trunnion between 0° and 10° as indicated by the Trunnion TPAC.

NOTE: Step 51 applies to Indicator Control panel 2021290 only.

51. Set OPTICS ZERO switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS ZERO switch to OFF.

NOTE: Step 51A applies to all Indicator Control panels except 2021290.

51A. Set OPTICS MODE switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS MODE switch to MAN.

52. Connect the PSA TPA #2 output TB3-32 (RED) HI and TB3-28 (BLK) LO to the Buffered Probe input J7 HI and J8 LO.

53. On the AUX INPUT PANEL, connect the Buffered Probe output to the Channel 3 AC input, to monitor the SCT Shaft MDA TACH Mon. signal on CHANNEL 3. Set the CHANNEL 3 switch on the AUX INPUT PANEL to OSS 800 cps.

54. Set CHANNEL 1 sensitivity to 10 MV/MM and CHANNEL 3 sensitivity to 5 MV/MM on Oscillograph Amplifier panel.

55. Holding the Optics Hand Controller to the left with the OPTICS SPEED switch set to HI, position the SXT Shaft to (-180° ± 1°) indicated by the Shaft TPAC. Return the OPTICS SPEED SWITCH to LO.

56. Start the Oscillograph by setting CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

57. Measure and record the steady state voltage indicated on the PAVM while holding the Optics Hand Controller to right limit. Continue holding Optics Hand Controller to right limit until SXT Shaft reaches +180° as indicated by the Shaft TPAC.

58. Release the Optics Hand Controller and set CHART DRIVE switch to OFF.

59. Set all sensitivities on Oscillograph Amplifier panel to OFF and record steady state indications of CHANNEL 1 and CHANNEL 3 per Figure 1. Record the maximum width of any pulses at 1/2 positive peak or 1/2 negative peak points of CHANNEL 1 and CHANNEL 3 per Figure 1.

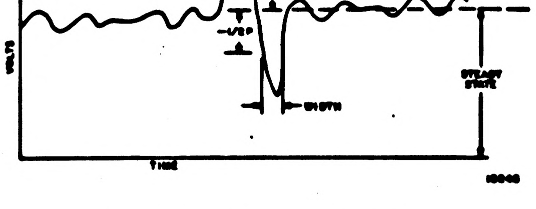

Figure 1. Signal Characteristics Diagram

NOTE: Step 60 applies to Indicator Control panel 2021290 only.

60. Set OPTICS ZERO switch on Indicator Control panel to ZERO. Wait 20 seconds before proceeding.

NOTE: Step 60A applies to all Indicator Control panels except 2021290.

60A. Set OPTICS MODE switch on Indicator Control panel to ZERO. Wait 20 seconds before proceeding.

61. Set CROSSBAR CONTROL on Primary Signal Selector panel to the following positions and measure the quadrature voltage indicated on the PAVM.

Signal	CROSSBAR CONTROL
a. SCT Trun MDA P/A Mon.	103
b. SXT Shaft MDA P/A Mon.	203
c. SXT Trun MDA P/A Mon.	106
d. SCT Shaft MDA P/A Mon.	210

NOTE: Step 62 applies to Indicator Control panel 2021290 only.

62. Set OPTICS ZERO switch on Indicator Control panel to OFF.

NOTE: Step 62A applies to all Indicator Control panels except 2021290.

62A. Set OPTICS MODE switch on Indicator Control panel to MAN.

63. Press MARK pushbutton. Observe DSKY displays VERB 06 NOUN 56 and data in the following form:

a. Row 1 = ±XXX.XX (Shaft angle in degrees)

b. Row 2 = ±XX.XXX (Trunnion angle in degrees)

c. Row 3 = XXX.XX (Time in seconds)

Record Row 1, Row 2, and Row 3 indications.

64. Approximately 60 seconds after first mark, press MARK pushbutton again and record new Row 1, Row 2, and Row 3 indications.

NOTE: Step 65 applies to Indicator Control panel 2021290 only.

65. Set OPTICS ZERO switch on Indicator Control panel to ZERO.

NOTE: Step 65A applies to all Indicator Control panels except 2021290.

65A. Set OPTICS MODE switch on Indicator Control panel to ZERO.

66. Press to extinguish OPTICS POWER ON pushbutton on Test Control panel.

66A. Return the G & N Mounting Fixture to the 0° position.

CALCULATIONS

67. Perform the following calculations for hand controller drift rates:

a. Δ Shaft angle = step 64.a - step 63.a

b. Δ Trunnion angle = step 64.b - step 63.b

NOTE: If step 64.c is less than step 63.c, add 163.84 seconds to step 64.c.

c. Δ Time = step 64.c - step 63.c

d. Shaft drift rate = $\frac{\Delta \text{ Shaft angle}}{\Delta \text{ Time}}$

e. Trunnion drift rate = $\frac{\Delta \text{ Trunnion angle}}{\Delta \text{ Time}}$

- e. OPTICS TELESCOPE TRUNNION to SLAVE TO SXT

4. Insure CH4 AC, CH5 AC, CH6 AC, 800 ~ 0 PH REFERENCE, and OPT 800 ~ TO PH GEN pushbuttons on Oscillograph Signal Selector panel are lighted.

5. Insure SCT TRUN, SXT SHAFT, and SXT TRUN switches on PSA Test Point Adapter are set to 1:1.

HIGH SPEED SLEW RATE

6. Set CHANNEL 2 switch on Oscillograph Signal Selector panel to 12 and CHANNEL 5 switch to 11 to monitor the following signals:

- a. SXT Trunnion MDA Tach Mon. on CHANNEL 2
- b. SCT Trunnion MDA Tach Mon. on CHANNEL 5

7. Set SCOPE "A" INPUT switch on Primary Signal Selector panel to SIG 2 and CROSSBAR CONTROL to 14 to monitor the SXT Trunnion MDA Output Mon. on Oscilloscope.

8. Press CHART SPEEDS 5 pushbutton on Oscillograph Control panel. Set CHANNEL 2 sensitivity on the Oscillograph Amplifier panel to 500 MV/MM and CHANNEL 5 sensitivity to 200 MV/MM.

NOTE: Step 9 applies to Indicator Control panel 2021290 only.

9. Set OPTICS ZERO switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS ZERO switch to OFF.

NOTE: Step 9A applies to all Indicator Control panels except 2021290.

9A. Set OPTICS MODE switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS MODE switch to MAN.

10. Start Oscillograph by setting CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

11. Measure and record the steady state peak to peak voltage indicated on the Oscilloscope while holding the Optics Hand Controller to the upper limit not longer than 5 seconds. Release the Optics Hand Controller and set CHART DRIVE switch to OFF. Set all sensitivities on Oscillograph Amplifier panel to OFF and record maximum steady state indications of CHANNELS 2 and 5.

12. Set CHANNEL 1 switch on Oscillograph Signal Selector panel to 13 to monitor the SCT Shaft MDA Tach Mon. signal on CHANNEL 1.

13. Set CHANNEL 1 sensitivity on Oscillograph Amplifier panel to 500 MV/MM.

14. Set SCOPE "A" INPUT switch on Primary Signal Selector panel to SIG 1 and

---

CROSSBAR CONTROL to 14 to monitor the SXT Shaft MDA Output Mon. on Oscilloscope.

14A. Using the Optics Hand Controller, position the SXT Trunnion between 0° and 10° as indicated by the Trunnion TPAC.

NOTE: Step 15 applies to Indicator Control panel 2021290 only.

15. Set OPTICS ZERO switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS ZERO switch to OFF.

NOTE: Step 15A applies to all Indicator Control panels except 2021290.

15A. Set OPTICS MODE switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS MODE switch to MAN.

16. Start the Oscillograph by setting CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

17. Measure and record the steady state peak to peak voltage indicated on the Oscilloscope while holding the Optics Hand Controller to the right limit not longer than 10 seconds. Release the Optics Hand Controller and set CHART DRIVE switch to OFF. Set all sensitivities on Oscillograph Amplifier panel to OFF and record the maximum steady state indications of CHANNEL 1.

18. Set the CHANNEL 1 switch on the Oscillograph Signal Selector panel to 12 to monitor the SXT Shaft MDA Tach Mon. voltage on CHANNEL 1.

19. Set CHANNEL 1 sensitivity to 500 mv/mm on the Oscillograph Amplifier panel.

20. Start the Oscillograph by setting the CHART DRIVE switch on the Oscillograph Control panel to MM/SEC.

21. Hold Optics Hand Controller to the left limit not longer than 10 seconds. Release Optics Hand Controller.

22. Stop Oscillograph and record maximum steady state indication on CHANNEL 1.

MEDIUM SPEED SLEW RATE

23. Set VOLTMETER INPUT PAVM switch on Primary Signal Selector panel to SIG 1 and CROSSBAR CONTROL to 05. Set PAVM FUNCTION selector to 0° to monitor in-phase voltage of the SCT Trunnion MDA Tach Mon.

NOTE: Step 24 applies to Indicator Control panel 2021290 only.

24. Set OPTICS ZERO switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS ZERO switch to OFF. Set OPTICS SPEED switch to MED.

NOTE: Step 24A applies to all Indicator Control panels except 2021290.

24A. Set OPTICS MODE switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS MODE switch to MAN. Set OPTICS CONTROLLER SPEED switch to MED.

25. Measure and record the voltage indicated on the PAVM while holding the Optics

---

Hand Controller to the upper limit not longer than 20 seconds. Release the Optics hand controller.

26. Set CHANNEL 5 switch to 11 on Oscillograph Signal Selector panel to monitor the SCT Trunnion MDA TACH Mon.

27. Set VOLTMETER INPUT PAVM switch on Primary Signal Selector panel SIG 2 and CROSSBAR CONTROL to 09 to monitor the SXT Trunnion MDA TACH Mon.

28. Set CHANNEL 5 sensitivity to 10 MV/MM on Oscillograph Amplifier panel. Press CHART SPEEDS 20 pushbutton on the Oscillograph Control Panel and set CHART DRIVE switch to MM/SEC.

29. Measure and record the voltage indicated on the PAVM while holding the Optics Hand Controller to the lower limit not longer than 20 seconds. Release the Optics Hand Controller and set CHART DRIVE switch to OFF. Set all sensitivities on Oscillograph Amplifier panel to OFF and record steady state indication of CHANNEL 5 per Figure 1. Record maximum width of any pulses at 1/2 positive peak or 1/2 negative peak points on CHANNEL 5 per Figure 1. If no pulses occur, write none on the data sheet.

30. Deleted.

31. Set VOLTMETER INPUT PAVM switch on Primary Signal Selector panel to SIG 2 and CROSSBAR CONTROL to 04 to monitor the SCT Shaft MDA Tach Mon.

NOTE: Step 32 applies to Indicator Control panel 2021290 only.

32. Set OPTICS ZERO switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS ZERO switch to OFF.

NOTE: Step 32A applies to all Indicator Control panels except 2021290.

32A. Set OPTICS MODE switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS MODE switch to MAN.

33. Measure and record the voltage indicated on the PAVM while holding the Optics Hand Controller to the right limit not longer than 20 seconds. Release the Optics Hand Controller.

34. Set CHANNEL 1 switch to 13 on Oscillograph Signal Selector panel to monitor the SCT Shaft MDA TACH Mon.

35. Set VOLTMETER INPUT PAVM switch on Primary Signal Selector panel to SIG 2 and CROSSBAR CONTROL to 07 to monitor the SXT Shaft MDA Tach Mon.

36. Set CHANNEL 1 sensitivity to 20 MV/MM on Oscillograph Amplifier panel and set CHART DRIVE switch to MM/SEC.

37. Measure and record the voltage indicated on the PAVM while holding the Optics Hand Controller to the left limit not longer than 20 seconds. Release the Optics Hand Controller and set CHART DRIVE switch to OFF. Set all sensitivities on Oscillograph Amplifier panel to OFF and record steady state indication of CHANNEL 1 per Figure 1. Record maximum width of any pulses at 1/2 positive peak or 1/2 negative peak points on

CHANNEL 1 per Figure 1. If no pulses occur, write none on the data sheet.

LOW SPEED SLEW RATE

38. Set VOLTMETER INPUT PAVM switch on Primary Signal Selector panel to SIG 2 and CROSSBAR CONTROL to 06 to monitor the CDU Trunnion Fine Error.

39. Set the DEGREES dial on the PAVM to 50.

NOTE: Step 40 applies to Indicator Control panel 2021290 only.

40. Set OPTICS ZERO switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS ZERO switch to OFF. Set OPTICS SPEED switch to LO.

NOTE: Step 40A applies to all Indicator Control panels except 2021290.

40A. Set OPTICS MODE switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS MODE switch to MAN. Set OPTICS CONTROLLER SPEED switch to LO.

41. Measure and record the steady state voltage indicated on the PAVM while holding Optics Hand Controller to the upper limit.

42. Release Optics Hand Controller. Set the DEGREES dial on the PAVM to 0.

43. Set VOLTMETER INPUT PAVM switch to SIG 1 and CROSSBAR CONTROL to 05 to monitor the SCT Trunnion MDA Tach Mon.

44. Set the CHANNEL 2 switch to 12 and the CHANNEL 5 switch to 11 on the Oscillograph Signal Selector panel to monitor:

a. SXT Trun MDA Tach Mon. on CHANNEL 2

b. SCT Trun MDA Tach Mon. on CHANNEL 5

45. Set CHANNEL 2 sensitivity to 10 MV/MM and CHANNEL 5 sensitivity to 5 MV/MM on Oscillograph Amplifier panel and set CHART DRIVE switch to MM/SEC.

46. Measure and record the steady state voltage indicated on the PAVM while holding the Optics Hand Controller to the upper limit until the SXT Trunnion reaches 85° LOS as indicated by the Trunnion TPAC. Release the Optics Hand Controller.

47. Set CHART DRIVE switch on Oscillograph Control panel to OFF. Set all sensitivities on Oscillograph Amplifier to OFF. Record steady state indication of CHANNELS 2 and 5 per Figure 1. Record maximum width of any pulses at 1/2 positive peak or 1/2 negative peak points on CHANNELS 2 and 5 per Figure 1.

47A. Measure and record the steady state voltage indicated on PAVM while holding Optics Hand Controller to lower limit. Release Optics Hand Controller.

47B. Add the absolute value recorded in step 46 to the absolute value recorded in step 47A and divide by two. Record results as average value of SCT Trun MDA Tach Mon.

48. Set CHANNEL 1 switch on Oscillograph Signal Selector panel to 12 to monitor SXT Shaft MDA Tach Mon. signal on CHANNEL 1.

49. Set VOLTMETER INPUT PAVM switch on Primary Signal Selector panel to SIG 2 and CROSSBAR CONTROL to 06 to monitor the CDU Shaft Fine Error.

50. Using the Optics Hand Controller with the OPTICS SPEED switch set to HI, position the SXT Trunnion between 0° and 10° as indicated by the Trunnion TPAC.

NOTE: Step 51 applies to Indicator Control panel 2021290 only.

51. Set OPTICS ZERO switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS ZERO switch to OFF.

NOTE: Step 51A applies to all Indicator Control panels except 2021290.

51A. Set OPTICS MODE switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS MODE switch to MAN.

52. Connect the PSA TPA #2 output TB3-32 (RED) HI and TB3-28 (BLK) LO to the Buffered Probe input J7 HI and J8 LO.

53. On the AUX INPUT PANEL, connect the Buffered Probe output to the Channel 3 AC input, to monitor the SCT Shaft MDA TACH Mon. signal on CHANNEL 3. Set the CHANNEL 3 switch on the AUX INPUT PANEL to OSS 800 cps.

54. Set CHANNEL 1 sensitivity to 10 MV/MM and CHANNEL 3 sensitivity to 5 MV/MM on Oscillograph Amplifier panel.

55. Holding the Optics Hand Controller to the left with the OPTICS SPEED switch set to HI, position the SXT Shaft to (-180° ± 1°) indicated by the Shaft TPAC. Return the OPTICS SPEED SWITCH to LO.

56. Start the Oscillograph by setting CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

57. Measure and record the steady state voltage indicated on the PAVM while holding the Optics Hand Controller to right limit. Continue holding Optics Hand Controller to right limit until SXT Shaft reaches +180° as indicated by the Shaft TPAC.

58. Release the Optics Hand Controller and set CHART DRIVE switch to OFF.

59. Set all sensitivities on Oscillograph Amplifier panel to OFF and record steady state indications of CHANNEL 1 and CHANNEL 3 per Figure 1. Record the maximum width of any pulses at 1/2 positive peak or 1/2 negative peak points of CHANNEL 1 and CHANNEL 3 per Figure 1.

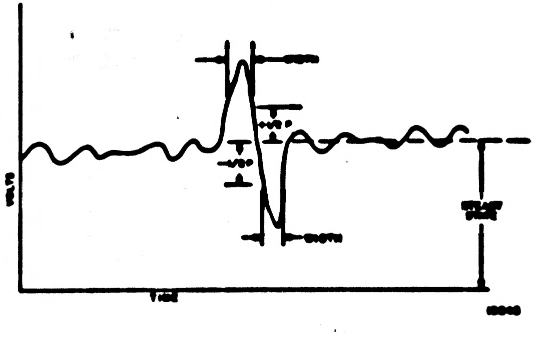

Figure 1. Signal Characteristics Diagram

NOTE: Step 60 applies to Indicator Control panel 2021290 only.

60. Set OPTICS ZERO switch on Indicator Control panel to ZERO. Wait 20 seconds before proceeding.

NOTE: Step 60A applies to all Indicator Control panels except 2021290.

60A. Set OPTICS MODE switch on Indicator Control panel to ZERO. Wait 20 seconds before proceeding.

61. Set CROSSBAR CONTROL on Primary Signal Selector panel to the following positions and measure the quadrature voltage indicated on the PAVM.

	Signal	CROSSBAR CONTROL
a.	SCT Trun MDA P/A Mon.	103
b.	SXT Shaft MDA P/A Mon.	203
c.	SXT Trun MDA P/A Mon.	106
d.	SCT Shaft MDA P/A Mon.	210

NOTE: Step 62 applies to Indicator Control panel 2021290 only.

62. Set OPTICS ZERO switch on Indicator Control panel to OFF.

NOTE: Step 62A applies to all Indicator Control panels except 2021290.

62A. Set OPTICS MODE switch on Indicator Control panel to MAN.

63. Press MARK pushbutton. Observe DSKY displays VERB 06 NOUN 56 and data in the following form:

a. Row 1 = ±XXX.XX (Shaft angle in degrees)

b. Row 2 = ±XX.XXX (Trunnion angle in degrees)

c. Row 3 = XXX.XX (Time in seconds)

Record Row 1, Row 2, and Row 3 indications.

64. Approximately 60 seconds after first mark, press MARK pushbutton again and record new Row 1, Row 2, and Row 3 indications.

NOTE: Step 65 applies to Indicator Control panel 2021290 only.

65. Set OPTICS ZERO switch on Indicator Control panel to ZERO.

NOTE: Step 65A applies to all Indicator Control panels except 2021290.

65A. Set OPTICS MODE switch on Indicator Control panel to ZERO.

66. Press to extinguish OPTICS POWER ON pushbutton on Test Control panel.

66A. Return the G & N Mounting Fixture to the 32.5° position.

CALCULATIONS

67. Perform the following calculations for hand controller drift rates:

a. Δ Shaft angle = step 64.a - step 63.a

b. Δ Trunnion angle = step 64.b - step 63.b

NOTE: If step 64.c is less than step 63.c, add 163.84 seconds to step 64.c.

c. Δ Time = step 64.c - step 63.c

d. Shaft drift rate = $\frac{\Delta \text{ Shaft angle}}{\Delta \text{ Time}}$

e. Trunnion drift rate = $\frac{\Delta \text{ Trunnion angle}}{\Delta \text{ Time}}$

PS-2015000

IMPORTANT Avoid slewing of SXT shaft and trunnion axes into their mechanical stops.

INTERVAL

TOOLS AND MATERIAL

NOTE: 1. The G & N Mounting Fixture shall be set at the 90.0° position. Care must be taken to prevent gimbal lock (see JDC 12215).

2. Oscillograph Amplifier sensitivities stated herein are nominal and may be adjusted at the discretion of the operator.

INITIALIZATION

1. Perform JDC 12215 to establish a Master Initialization condition.

2. Press to light OPTICS POWER ON pushbutton on Test Control panel.

NOTE: Step 3 applies to Indicator Control panel 2021290 only.

3. Set switches on Indicator Control panel as follows:

a. OPTICS ZERO to OFF
b. OPTICS TEL TRUN to SLAVE TO SXT
c. OPTICS COUPLING to DIRECT
d. OPTICS MODE to MAN
e. OPTICS SPEED to HI

NOTE: Step 3A applies to all Indicator Control panels except 2021290.

3A. Set switches on Indicator Control panel

VERIFICATION WITH SIDL REQUIRED BEFORE USE

DATE 30 JUN 66

---

as follows:

a. OPTICS MODE to MAN
b. OPTICS CONTROLLER SPEED to HI
c. OPTICS CONTROLLER COUPLING to DIRECT
d. OPTICS TRACKER to OFF
e. OPTICS TELESCOPE TRUNNION to SLAVE TO SXT

4. Insure CH4 AC, CH5 AC, CH6 AC, 800 ~ 0 PH REFERENCE, and OPT 800 ~ TO PH GEN pushbuttons on Oscillograph Signal Selector panel are lighted.

5. Insure SCT TRUN, SXT SHAFT, and SXT TRUN switches on PSA Test Point Adapter are set to 1:1.

HIGH SPEED SLEW RATE

6. Set CHANNEL 2 switch on Oscillograph Signal Selector panel to 12 and CHANNEL 5 switch to 11 to monitor the following signals:

a. SXT Trunnion MDA Tach Mon. on CHANNEL 2
b. SCT Trunnion MDA Tach Mon. on CHANNEL 5

7. Set SCOPE "A" INPUT switch on Primary Signal Selector panel to SIG 2 and CROSSBAR CONTROL to 14 to monitor the SXT Trunnion MDA Output Mon. on Oscilloscope.

8. Press CHART SPEEDS 5 pushbutton on Oscillograph Control panel. Set CHANNEL 2 sensitivity on the Oscillograph Amplifier panel to 500 MV/MM and CHANNEL 5 sensitivity to 200 MV/MM.

NOTE: Step 9 applies to Indicator Control panel 2021290 only.

9. Set OPTICS ZERO switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS ZERO switch to OFF.

NOTE: Step 9A applies to all Indicator Control panels except 2021290.

9A. Set OPTICS MODE switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS MODE switch to MAN.

10. Start Oscillograph by setting CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

11. Measure and record the steady state peak to peak voltage indicated on the Oscilloscope while holding the Optics Hand Controller to the upper limit not longer than 5 seconds. Release the Optics Hand Controller and set CHART DRIVE switch to OFF. Set all sensitivities on Oscillograph Amplifier panel to OFF and record maximum steady state indications of CHANNELS 2 and 5.

12. Set CHANNEL 1 switch on Oscillograph Signal Selector panel to 13 to monitor the SCT Shaft MDA Tach Mon. signal on CHANNEL 1.

13. Set CHANNEL 1 sensitivity on Oscillograph Amplifier panel to 500 MV/MM.

14. Set SCOPE "A" INPUT switch on Primary Signal Selector panel to SIG 1 and

DATE 30 JUN 66

CROSSBAR CONTROL to 14 to monitor the SXT Shaft MDA Output Mon. on Oscilloscope.

14A. Using the Optics Hand Controller, position the SXT Trunnion between 0° and 10° as indicated by the Trunnion TPAC.

NOTE: Step 15 applies to Indicator Control panel 2021290 only.

15. Set OPTICS ZERO switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS ZERO switch to OFF.

NOTE: Step 15A applies to all Indicator Control panels except 2021290.

15A. Set OPTICS MODE switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS MODE switch to MAN.

16. Start the Oscillograph by setting CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

17. Measure and record the steady state peak to peak voltage indicated on the Oscilloscope while holding the Optics Hand Controller to the right limit not longer than 10 seconds. Release the Optics Hand Controller and set CHART DRIVE switch to OFF. Set all sensitivities on Oscillograph Amplifier panel to OFF and record the maximum steady state indications of CHANNEL 1.

18. Set the CHANNEL 1 switch on the Oscillograph Signal Selector panel to 12 to monitor the SXT Shaft MDA Tach Mon. voltage on CHANNEL 1.

19. Set CHANNEL 1 sensitivity to 500 mv/mm on the Oscillograph Amplifier panel.

20. Start the Oscillograph by setting the CHART DRIVE switch on the Oscillograph Control panel to MM/SEC.

21. Hold Optics Hand Controller to the left limit not longer than 10 seconds. Release Optics Hand Controller.

22. Stop Oscillograph and record maximum steady state indication on CHANNEL 1.

MEDIUM SPEED SLEW RATE

23. Set VOLTMETER INPUT PAVM switch on Primary Signal Selector panel to SIG 1 and CROSSBAR CONTROL to 05. Set PAVM FUNCTION selector to 0° to monitor in-phase voltage of the SCT Trunnion MDA Tach Mon.

NOTE: Step 24 applies to Indicator Control panel 2021290 only.

24. Set OPTICS ZERO switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS ZERO switch to OFF. Set OPTICS SPEED switch to MED.

NOTE: Step 24A applies to all Indicator Control panels except 2021290.

24A. Set OPTICS MODE switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS MODE switch to MAN. Set OPTICS CONTROLLER SPEED switch to MED.

25. Measure and record the voltage indicated on the PAVM while holding the Optics

DATE 30 JUN 66

Hand Controller to the upper limit not longer than 20 seconds. Release the Optics hand controller.

26. Set CHANNEL 5 switch to 11 on Oscillograph Signal Selector panel to monitor the SCT Trunnion MDA TACH Mon.

27. Set VOLTMETER INPUT PAVM switch on Primary Signal Selector panel SIG 2 and CROSSBAR CONTROL to 09 to monitor the SXT Trunnion MDA TACH Mon.

28. Set CHANNEL 5 sensitivity to 10 MV/MM on Oscillograph Amplifier panel. Press CHART SPEEDS 20 pushbutton on the Oscillograph Control Panel and set CHART DRIVE switch to MM/SEC.

29. Measure and record the voltage indicated on the PAVM while holding the Optics Hand Controller to the lower limit not longer than 20 seconds. Release the Optics Hand Controller and set CHART DRIVE switch to OFF. Set all sensitivities on Oscillograph Amplifier panel to OFF and record steady state indication of CHANNEL 5 per Figure 1. Record maximum width of any pulses at 1/2 positive peak or 1/2 negative peak points on CHANNEL 5 per Figure 1. If no pulses occur, write none on the data sheet.

30. Deleted.

31. Set VOLTMETER INPUT PAVM switch on Primary Signal Selector panel to SIG 2 and CROSSBAR CONTROL to 04 to monitor the SCT Shaft MDA Tach Mon.

NOTE: Step 32 applies to Indicator Control panel 2021290 only.

32. Set OPTICS ZERO switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS ZERO switch to OFF.

NOTE: Step 32A applies to all Indicator Control panels except 2021290.

32A. Set OPTICS MODE switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS MODE switch to MAN.

33. Measure and record the voltage indicated on the PAVM while holding the Optics Hand Controller to the right limit not longer than 20 seconds. Release the Optics Hand Controller.

34. Set CHANNEL 1 switch to 13 on Oscillograph Signal Selector panel to monitor the SCT Shaft MDA TACH Mon.

35. Set VOLTMETER INPUT PAVM switch on Primary Signal Selector panel to SIG 2 and CROSSBAR CONTROL to 07 to monitor the SXT Shaft MDA Tach Mon.

36. Set CHANNEL 1 sensitivity to 20 MV/MM on Oscillograph Amplifier panel and set CHART DRIVE switch to MM/SEC.

37. Measure and record the voltage indicated on the PAVM while holding the Optics Hand Controller to the left limit not longer than 20 seconds. Release the Optics Hand Controller and set CHART DRIVE switch to OFF. Set all sensitivities on Oscillograph Amplifier panel to OFF and record steady state indication of CHANNEL 1 per Figure 1. Record maximum width of any pulses at 1/2 positive peak or 1/2 negative peak points on

DATE 30 JUN 66

CHANNEL 1 per Figure 1. If no pulses occur, write none on the data sheet.

LOW SPEED SLEW RATE

38. Set VOLTMETER INPUT PAVM switch on Primary Signal Selector panel to SIG 2 and CROSSBAR CONTROL to 06 to monitor the CDU Trunnion Fine Error.

39. Set the DEGREES dial on the PAVM to 50.

NOTE: Step 40 applies to Indicator Control panel 2021290 only.

40. Set OPTICS ZERO switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS ZERO switch to OFF. Set OPTICS SPEED switch to LO.

NOTE: Step 40A applies to all Indicator Control panels except 2021290.

40A. Set OPTICS MODE switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS MODE switch to MAN. Set OPTICS CONTROLLER SPEED switch to LO.

41. Measure and record the steady state voltage indicated on the PAVM while holding Optics Hand Controller to the upper limit.

42. Release Optics Hand Controller. Set the DEGREES dial on the PAVM to 0.

43. Set VOLTMETER INPUT PAVM switch to SIG 1 and CROSSBAR CONTROL to 05 to monitor the SCT Trunnion MDA Tach Mon.

44. Set the CHANNEL 2 switch to 12 and the CHANNEL 5 switch to 11 on the Oscillograph Signal Selector panel to monitor:

a. SXT Trun MDA Tach Mon. on CHANNEL 2

b. SCT Trun MDA Tach Mon. on CHANNEL 5

45. Set CHANNEL 2 sensitivity to 10 MV/MM and CHANNEL 5 sensitivity to 5 MV/MM on Oscillograph Amplifier panel and set CHART DRIVE switch to MM/SEC.

46. Measure and record the steady state voltage indicated on the PAVM while holding the Optics Hand Controller to the upper limit until the SXT Trunnion reaches 85° LOS as indicated by the Trunnion TPAC. Release the Optics Hand Controller.

47. Set CHART DRIVE switch on Oscillograph Control panel to OFF. Set all sensitivities on Oscillograph Amplifier to OFF. Record steady state indication of CHANNELS 2 and 5 per Figure 1. Record maximum width of any pulses at 1/2 positive peak or 1/2 negative peak points on CHANNELS 2 and 5 per Figure 1.

47A. Measure and record the steady state voltage indicated on PAVM while holding Optics Hand Controller to lower limit. Release Optics Hand Controller.

47B. Add the absolute value recorded in step 46 to the absolute value recorded in step 47A and divide by two. Record results as average value of SCT Trun MDA Tach Mon.

48. Set CHANNEL 1 switch on Oscillograph Signal Selector panel to 12 to monitor SXT Shaft MDA Tach Mon. signal on CHANNEL 1.

---

49. Set VOLTMETER INPUT PAVM switch on Primary Signal Selector panel to SIG 2 and CROSSBAR CONTROL to 05 to monitor the CDU Shaft Fine Error.

50. Using the Optics Hand Controller with the OPTICS SPEED switch set to HI, position the SXT Trunnion between 0° and 10° as indicated by the Trunnion TPAC.

NOTE: Step 51 applies to Indicator Control panel 2021290 only.

51. Set OPTICS ZERO switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS ZERO switch to OFF.

NOTE: Step 51A applies to all Indicator Control panels except 2021290.

51A. Set OPTICS MODE switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS MODE switch to MAN.

52. Connect the PSA TPA #2 output TB3-32 (RED) HI and TB3-28 (BLK) LO to the Buffered Probe input J7 HI and J8 LO.

53. On the AUX INPUT PANEL, connect the Buffered Probe output to the Channel 3 AC input, to monitor the SCT Shaft MDA TACH Mon. signal on CHANNEL 3. Set the CHANNEL 3 switch on the AUX INPUT PANEL to OSS 800 cps. Set CHANNEL 3 switch on Oscillograph Signal Selector panel to 15.

54. Set CHANNEL 1 sensitivity to 10 MV/MM and CHANNEL 3 sensitivity to 5 MV/MM on Oscillograph Amplifier panel.

55. Holding the Optics Hand Controller to the left with the OPTICS SPEED switch set to HI, position the SXT Shaft to (-180° ± 1°) indicated by the Shaft TPAC. Return the OPTICS SPEED SWITCH to LO.

56. Start the Oscillograph by setting CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

57. Measure and record the steady state voltage indicated on the PAVM while holding the Optics Hand Controller to right limit. Continue holding Optics Hand Controller to right limit until SXT Shaft reaches +180° as indicated by the Shaft TPAC.

58. Release the Optics Hand Controller and set CHART DRIVE switch to OFF.

59. Set all sensitivities on Oscillograph Amplifier panel to OFF and record steady state indications of CHANNEL 1 and CHANNEL 3 per Figure 1. Record the maximum width of any pulses at 1/2 positive peak or 1/2 negative peak points of CHANNEL 1 and CHANNEL 3 per Figure 1.

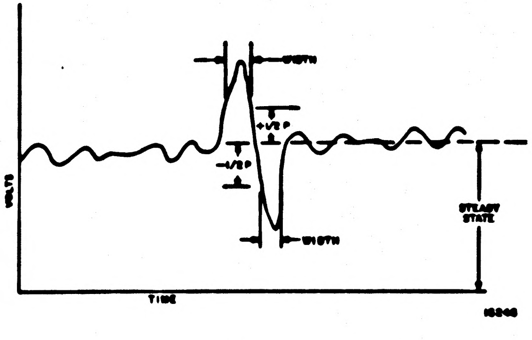

Figure 1. Signal Characteristics Diagram

NOTE: Step 60 applies to Indicator Control panel 2021290 only.

60. Set OPTICS ZERO switch on Indicator Control panel to ZERO. Wait 20 seconds before proceeding.

NOTE: Step 60A applies to all Indicator Control panels except 2021290.

60A. Set OPTICS MODE switch on Indicator Control panel to ZERO. Wait 20 seconds before proceeding.

61. Set CROSSBAR CONTROL on Primary Signal Selector panel to the following positions and measure the quadrature voltage indicated on the PAVM.

Signal	CROSSBAR CONTROL
a. SCT Trun MDA P/A Mon.	103
b. SXT Shaft MDA P/A Mon.	203
c. SXT Trun MDA P/A Mon.	106
d. SCT Shaft MDA P/A Mon.	210

NOTE: Step 62 applies to Indicator Control panel 2021290 only.

62. Set OPTICS ZERO switch on Indicator Control panel to OFF.

NOTE: Step 62A applies to all Indicator Control panels except 2021290.

62A. Set OPTICS MODE switch on Indicator Control panel to MAN.

63. Press MARK pushbutton. Observe DSKY displays VERB 06 NOUN 56 and data in the following form:

a. Row 1 = ±XXX.XX (Shaft angle in degrees)

b. Row 2 = ±XX.XXX (Trunnion angle in degrees)

c. Row 3 = XXX.XX (Time in seconds)

Record Row 1, Row 2, and Row 3 indications.

64. Approximately 60 seconds after first mark, press MARK pushbutton again and record new Row 1, Row 2, and Row 3 indications.

NOTE: Step 65 applies to Indicator Control panel 2021290 only.

65. Set OPTICS ZERO switch on Indicator Control panel to ZERO.

NOTE: Step 65A applies to all Indicator Control panels except 2021290.

65A. Set OPTICS MODE switch on Indicator Control panel to ZERO.

66. Press to extinguish OPTICS POWER ON pushbutton on Test Control panel.

66A. Return the G & N Mounting Fixture to the 32.5° position.

CALCULATIONS

67. Perform the following calculations for hand controller drift rates:

a. Δ Shaft angle = step 64.a - step 63.a

b. Δ Trunnion angle = step 64.b - step 63.b

NOTE: If step 64.c is less than step 63.c, add 163.84 seconds to step 64.c.

c. Δ Time = step 64.c - step 63.c

d. Shaft drift rate = $\frac{\Delta \text{Shaft angle}}{\Delta \text{Time}}$

e. Trunnion drift rate = $\frac{\Delta \text{Trunnion angle}}{\Delta \text{Time}}$

IMPORTANT Avoid slewing of SXT shaft and trunnion axes into their mechanical stops.

INTERVAL

TOOLS AND MATERIAL

NOTE: 1. The G & N Mounting Fixture shall be set at the 90.0° position. Care must be taken to prevent gimbal lock (see JDC 12215).

2. Oscillograph Amplifier sensitivities stated herein are nominal and may be adjusted at the discretion of the operator.

INITIALIZATION

1. Perform JDC 12215 to establish a Master Initialization condition.

2. Press to light OPTICS POWER ON pushbutton on Test Control panel.

NOTE: Step 3 applies to Indicator Control panel 2021290 only.

3. Set switches on Indicator Control panel as follows:

a. OPTICS ZERO to OFF

b. OPTICS TEL TRUN to SLAVE TO SXT

c. OPTICS COUPLING to DIRECT

d. OPTICS MODE to MAN

e. OPTICS SPEED to HI

NOTE: Step 3A applies to all Indicator Control panels except 2021290.

3A. Set switches on Indicator Control panel

VERIFICATION WITH SIDL REQUIRED BEFORE USE

DATE 30 JUN 66

JOB OPTICS SLEW RATE TEST

JDC 12213 REV V PAGE 2 OF 8

SUBSYSTEM G AND N SYSTEM

ASSY

as follows:

a. OPTICS MODE to MAN

b. OPTICS CONTROLLER SPEED to HI

c. OPTICS CONTROLLER COUPLING to DIRECT

d. OPTICS TRACKER to OFF

e. OPTICS TELESCOPE TRUNNION to SLAVE TO SXT

4. Insure CH4 AC, CH5 AC, CH6 AC, 800 ~ 0 PH REFERENCE, and OPT 800 ~ TO PH GEN pushbuttons on Oscillograph Signal Selector panel are lighted.

5. Insure SCT TRUN, SXT SHAFT, and SXT TRUN switches on PSA Test Point Adapter are set to 1:1.

HIGH SPEED SLEW RATE

6. Set CHANNEL 2 switch on Oscillograph Signal Selector panel to 12 and CHANNEL 5 switch to 11 to monitor the following signals:

a. SXT Trunnion MDA Tach Mon. on CHANNEL 2

b. SCT Trunnion MDA Tach Mon. on CHANNEL 5

7. Set SCOPE "A" INPUT switch on Primary Signal Selector panel to SIG 2 and CROSSBAR CONTROL to 14 to monitor the SXT Trunnion MDA Output Mon. on Oscilloscope.

8. Press CHART SPEEDS 5 pushbutton on Oscillograph Control panel. Set CHANNEL 2 sensitivity on the Oscillograph Amplifier panel to 500 MV/MM and CHANNEL 5 sensitivity to 200 MV/MM.

NOTE: Step 9 applies to Indicator Control panel 2021290 only.

9. Set OPTICS ZERO switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS ZERO switch to OFF.

NOTE: Step 9A applies to all Indicator Control panels except 2021290.

9A. Set OPTICS MODE switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS MODE switch to MAN.

10. Start Oscillograph by setting CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

11. Measure and record the steady state peak to peak voltage indicated on the Oscilloscope while holding the Optics Hand Controller to the upper limit not longer than 5 seconds. Release the Optics Hand Controller and set CHART DRIVE switch to OFF. Set all sensitivities on Oscillograph Amplifier panel to OFF and record maximum steady state indications of CHANNELS 2 and 5.

12. Set CHANNEL 1 switch on Oscillograph Signal Selector panel to 13 to monitor the SCT Shaft MDA Tach Mon. signal on CHANNEL 1.

13. Set CHANNEL 1 sensitivity on Oscillograph Amplifier panel to 500 MV/MM.

14. Set SCOPE "A" INPUT switch on Primary Signal Selector panel to SIG 1 and

DATE 30 JUN 66

JOB OPTICS SLEW RATE TEST

JDC 12213 REV V PAGE 3 OF 8

SUBSYSTEM G AND N SYSTEM

ASSY

CROSSBAR CONTROL to 14 to monitor the SXT Shaft MDA Output Mon. on Oscilloscope.

14A. Using the Optics Hand Controller, position the SXT Trunnion between 0° and 10° as indicated by the Trunnion TPAC.

NOTE: Step 15 applies to Indicator Control panel 2021290 only.

15. Set OPTICS ZERO switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS ZERO switch to OFF.

NOTE: Step 15A applies to all Indicator Control panels except 2021290.

15A. Set OPTICS MODE switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS MODE switch to MAN.

16. Start the Oscillograph by setting CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

17. Measure and record the steady state peak to peak voltage indicated on the Oscilloscope while holding the Optics Hand Controller to the right limit not longer than 10 seconds. Release the Optics Hand Controller and set CHART DRIVE switch to OFF. Set all sensitivities on Oscillograph Amplifier panel to OFF and record the maximum steady state indications of CHANNEL 1.

18. Set the CHANNEL 1 switch on the Oscillograph Signal Selector panel to 12 to monitor the SXT Shaft MDA Tach Mon. voltage on CHANNEL 1.

19. Set CHANNEL 1 sensitivity to 500 mv/mm on the Oscillograph Amplifier panel.

20. Start the Oscillograph by setting the CHART DRIVE switch on the Oscillograph Control panel to MM/SEC.

21. Hold Optics Hand Controller to the left limit not longer than 10 seconds. Release Optics Hand Controller.

22. Stop Oscillograph and record maximum steady state indication on CHANNEL 1.

MEDIUM SPEED SLEW RATE

23. Set VOLTMETER INPUT PAVM switch on Primary Signal Selector panel to SIG 1 and CROSSBAR CONTROL to 05. Set PAVM FUNCTION selector to 0° to monitor in-phase voltage of the SCT Trunnion MDA Tach Mon.

NOTE: Step 24 applies to Indicator Control panel 2021290 only.

24. Set OPTICS ZERO switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS ZERO switch to OFF. Set OPTICS SPEED switch to MED.

NOTE: Step 24A applies to all Indicator Control panels except 2021290.

24A. Set OPTICS MODE switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS MODE switch to MAN. Set OPTICS CONTROLLER SPEED switch to MED.

25. Measure and record the voltage indicated on the PAVM while holding the Optics

SUBSYSTEM G AND N SYSTEM

ASSY

Hand Controller to the upper limit not longer than 20 seconds. Release the Optics hand controller.

26. Set CHANNEL 5 switch to 11 on Oscillograph Signal Selector panel to monitor the SCT Trunnion MDA TACH Mon.

27. Set VOLTMETER INPUT PAVM switch on Primary Signal Selector panel SIG 2 and CROSSBAR CONTROL to 09 to monitor the SXT Trunnion MDA TACH Mon.

28. Set CHANNEL 5 sensitivity to 10 MV/MM on Oscillograph Amplifier panel. Press CHART SPEEDS 20 pushbutton on the Oscillograph Control Panel and set CHART DRIVE switch to MM/SEC.

29. Measure and record the voltage indicated on the PAVM while holding the Optics Hand Controller to the lower limit not longer than 20 seconds. Release the Optics Hand Controller and set CHART DRIVE switch to OFF. Set all sensitivities on Oscillograph Amplifier panel to OFF and record steady state indication of CHANNEL 5 per Figure 1. Record maximum width of any pulses at 1/2 positive peak or 1/2 negative peak points on CHANNEL 5 per Figure 1. If no pulses occur, write none on the data sheet.

30. Deleted.

31. Set VOLTMETER INPUT PAVM switch on Primary Signal Selector panel to SIG 2 and CROSSBAR CONTROL to 04 to monitor the SCT Shaft MDA Tach Mon.

NOTE: Step 32 applies to Indicator Control panel 2021290 only.

32. Set OPTICS ZERO switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS ZERO switch to OFF.

NOTE: Step 32A applies to all Indicator Control panels except 2021290.

32A. Set OPTICS MODE switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS MODE switch to MAN.

33. Measure and record the voltage indicated on the PAVM while holding the Optics Hand Controller to the right limit not longer than 20 seconds. Release the Optics Hand Controller.

34. Set CHANNEL 1 switch to 13 on Oscillograph Signal Selector panel to monitor the SCT Shaft MDA TACH Mon.

35. Set VOLTMETER INPUT PAVM switch on Primary Signal Selector panel to SIG 2 and CROSSBAR CONTROL to 07 to monitor the SXT Shaft MDA Tach Mon.

36. Set CHANNEL 1 sensitivity to 20 MV/MM on Oscillograph Amplifier panel and set CHART DRIVE switch to MM/SEC.

37. Measure and record the voltage indicated on the PAVM while holding the Optics Hand Controller to the left limit not longer than 20 seconds. Release the Optics Hand Controller and set CHART DRIVE switch to OFF. Set all sensitivities on Oscillograph Amplifier panel to OFF and record steady state indication of CHANNEL 1 per Figure 1. Record maximum width of any pulses at 1/2 positive peak or 1/2 negative peak points on

DATE 30 JUN 66

CHANNEL 1 per Figure 1. If no pulses occur, write none on the data sheet.

LOW SPEED SLEW RATE

38. Set VOLTMETER INPUT PAVM switch on Primary Signal Selector panel to SIG 2 and CROSSBAR CONTROL to 06 to monitor the CDU Trunnion Fine Error.

39. Set the DEGREES dial on the PAVM to 50.

NOTE: Step 40 applies to Indicator Control panel 2021290 only.

40. Set OPTICS ZERO switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS ZERO switch to OFF. Set OPTICS SPEED switch to LO.

NOTE: Step 40A applies to all Indicator Control panels except 2021290.

40A. Set OPTICS MODE switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS MODE switch to MAN. Set OPTICS CONTROLLER SPEED switch to LO.

41. Measure and record the steady state voltage and sign indicated on the PAVM while holding Optics Hand Controller to the upper limit.

41A. Measure and record the steady state voltage and sign indicated on the PAVM while holding Optics Hand Controller to the lower limit.

41B. Release Optics Hand Controller. Add the absolute value recorded in step 41 to the absolute value recorded in step 41A. Record the result.

42. Set the DEGREES dial on the PAVM to 0.

43. Set VOLTMETER INPUT PAVM switch to SIG 1 and CROSSBAR CONTROL to 05 to monitor the SCT Trunnion MDA Tach Mon.

44. Set the CHANNEL 2 switch to 12 and the CHANNEL 5 switch to 11 on the Oscillograph Signal Selector panel to monitor:

a. SXT Trun MDA Tach Mon. on CHANNEL 2

b. SCT Trun MDA Tach Mon. on CHANNEL 5

45. Set CHANNEL 2 sensitivity to 10 MV/MM and CHANNEL 5 sensitivity to 5 MV/MM on Oscillograph Amplifier panel and set CHART DRIVE switch to MM/SEC.

46. Measure and record the steady state voltage indicated on the PAVM while holding the Optics Hand Controller to the upper limit until the SXT Trunnion reaches 85° LOS as indicated by the Trunnion TPAC. Release the Optics Hand Controller.

47. Set CHART DRIVE switch on Oscillograph Control panel to OFF. Set all sensitivities on Oscillograph Amplifier to OFF. Record steady state indication of CHANNELS 2 and 5 per Figure 1. Record maximum width of any pulses at 1/2 positive peak or 1/2 negative peak points on CHANNELS 2 and 5 per Figure 1.

47A. Measure and record the steady state voltage indicated on PAVM while holding Optics Hand Controller to lower limit. Release Optics Hand Controller.

47B. Add the absolute value recorded in step 46 to the absolute value recorded in step 47A and divide by two. Record results as average value of SCT Trun MDA Tach Mon.

48. Set CHANNEL 1 switch on Oscillograph Signal Selector panel to 12 to monitor SXT Shaft MDA Tach Mon. signal on CHANNEL 1.

49. Set VOLTMETER INPUT PAVM switch on Primary Signal Selector panel to SIG 2 and CROSSBAR CONTROL to 05 to monitor the CDU Shaft Fine Error.

50. Using the Optics Hand Controller with the OPTICS SPEED switch set to HI, position the SXT Trunnion between 0° and 10° as indicated by the Trunnion TPAC.

NOTE: Step 51 applies to Indicator Control panel 2021290 only.

51. Set OPTICS ZERO switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS ZERO switch to OFF.

NOTE: Step 51A applies to all Indicator Control panels except 2021290.

51A. Set OPTICS MODE switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS MODE switch to MAN.

52. Connect the PSA TPA #2 output TB3-32 (RED) HI and TB3-28 (BLK) LO to the Buffered Probe input J7 HI and J8 LO.

53. On the AUX INPUT PANEL, connect the Buffered Probe output to the Channel 3 AC input, to monitor the SCT Shaft MDA TACH Mon. signal on CHANNEL 3. Set the CHANNEL 3 switch on the AUX INPUT PANEL to OSS 800 cps. Set CHANNEL 3 switch on Oscillograph Signal Selector panel to 15.

54. Set CHANNEL 1 sensitivity to 10 MV/MM and CHANNEL 3 sensitivity to 5 MV/MM on Oscillograph Amplifier panel.

55. Holding the Optics Hand Controller to the left with the OPTICS SPEED switch set to HI, position the SXT Shaft to $(-180^\circ \pm 1^\circ)$ indicated by the Shaft TPAC. Return the OPTICS SPEED SWITCH to LO.

56. Start the Oscillograph by setting CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

57. Measure and record the steady state voltage indicated on the PAVM while holding the Optics Hand Controller to right limit. Continue holding Optics Hand Controller to right limit until SXT Shaft reaches +180° as indicated by the Shaft TPAC.

58. Release the Optics Hand Controller and set CHART DRIVE switch to OFF.

59. Set all sensitivities on Oscillograph Amplifier panel to OFF and record steady state indications of CHANNEL 1 and CHANNEL 3 per Figure 1. Record the maximum width of any pulses at 1/2 positive peak or 1/2 negative peak points of CHANNEL 1 and CHANNEL 3 per Figure 1.

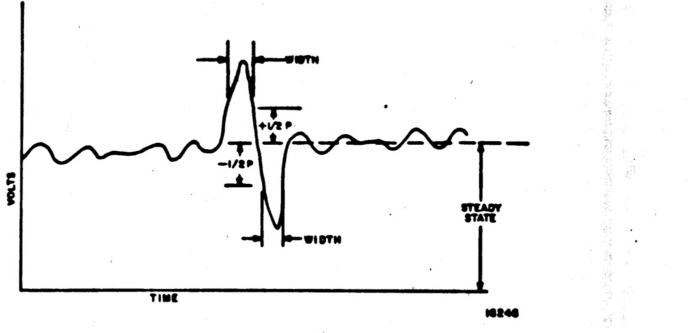

Figure 1. Signal Characteristics Diagram

NOTE: Step 60 applies to Indicator Control panel 2021290 only.

60. Set OPTICS ZERO switch on Indicator Control panel to ZERO. Wait 20 seconds before proceeding.

NOTE: Step 60A applies to all Indicator Control panels except 2021290.

60A. Set OPTICS MODE switch on Indicator Control panel to ZERO. Wait 20 seconds before proceeding.

61. Set CROSSBAR CONTROL on Primary Signal Selector panel to the following positions and measure the quadrature voltage indicated on the PAVM.

Signal	CROSSBAR CONTROL
a. SCT Trun MDA P/A Mon.	103
b. SXT Shaft MDA P/A Mon.	203
c. SXT Trun MDA P/A Mon.	106
d. SCT Shaft MDA P/A Mon.	210

NOTE: Step 62 applies to Indicator Control panel 2021290 only.

62. Set OPTICS ZERO switch on Indicator Control panel to OFF.

NOTE: Step 62A applies to all Indicator Control panels except 2021290.

62A. Set OPTICS MODE switch on Indicator Control panel to MAN.

63. Press MARK pushbutton. Observe DSKY displays VERB 06 NOUN 56 and data in the following form:

a. Row 1 = ±XXX.XX (Shaft angle in degrees)

b. Row 2 = ±XX.XXX (Trunnion angle in degrees)

c. Row 3 = XXX.XX (Time in seconds)

Record Row 1, Row 2, and Row 3 indications.

64. Approximately 60 seconds after first mark, press MARK pushbutton again and record new Row 1, Row 2, and Row 3 indications.

NOTE: Step 65 applies to Indicator Control panel 2021290 only.

65. Set OPTICS ZERO switch on Indicator Control panel to ZERO.

NOTE: Step 65A applies to all Indicator Control panels except 2021290.

65A. Set OPTICS MODE switch on Indicator Control panel to ZERO.

66. Press to extinguish OPTICS POWER ON pushbutton on Test Control panel.

66A. Return the G & N Mounting Fixture to the 32.5° position.

CALCULATIONS

67. Perform the following calculations for hand controller drift rates:

a. Δ Shaft angle = step 64.a - step 63.a

b. Δ Trunnion angle = step 64.b - step 63.b

NOTE: If step 64.c is less than step 63.c, add 163.84 seconds to step 64.c.

c. Δ Time = step 64.c - step 63.c

d. Shaft drift rate $= \dfrac{\Delta \text{Shaft angle}}{\Delta \text{Time}}$

e. Trunnion drift rate $= \dfrac{\Delta \text{Trunnion angle}}{\Delta \text{Time}}$

REFERENCES PS-2015000

IMPORTANT Avoid slewing of SXT shaft and trunnion axes into their mechanical stops.

INTERVAL

TOOLS AND MATERIAL

NOTE: 1. Use extreme care when tilting G&N Mounting Fixture to insure that components do not strike crade locking handles.

2. The G&N Mounting Fixture shall be set at the 90.0° position. Care must be taken to prevent gimbal lock (see JDC 12215).

3. Oscillograph Amplifier sensitivities stated herein are nominal and may be adjusted at the discretion of the operator.

INITIALIZATION

1. Perform JDC 12215 to establish a Master Initialization condition.

2. Press to light OPTICS POWER ON pushbutton on Test Control panel.

NOTE: Step 3 applies to Indicator Control panel 2021290 only.

3. Set switches on Indicator Control panel as follows:

a. OPTICS ZERO to OFF
b. OPTICS TEL TRUN to SLAVE TO SXT
c. OPTICS COUPLING to DIRECT
d. OPTICS MODE to MAN
e. OPTICS SPEED to HI

NOTE: Step 3A applies to all Indicator Control panels except 2021290.

3A. Set switches on Indicator Control panel

VERIFICATION WITH SIDL REQUIRED BEFORE USE

DATE 30 JUN 66

JOB OPTICS SLEW RATE TEST

JDC 12213 REV W PAGE 2 OF 10

SUBSYSTEM G AND N SYSTEM

ASSY

as follows:

a. OPTICS MODE to MAN
b. OPTICS CONTROLLER SPEED to HI
c. OPTICS CONTROLLER COUPLING to DIRECT
d. OPTICS TRACKER to OFF
e. OPTICS TELESCOPE TRUNNION to SLAVE TO SXT

4. Insure CH4 AC, CH5 AC, CH6 AC, 800 ~ 0 PH REFERENCE, and OPT 800 ~ TO PH GEN pushbuttons on Oscillograph Signal Selector panel are lighted.

5. Insure SCT TRUN, SXT SHAFT, and SXT TRUN switches on PSA Test Point Adapter are set to 1:1.

HIGH SPEED SLEW RATE

6. Set CHANNEL 2 switch on Oscillograph Signal Selector panel to 12 and CHANNEL 5 switch to 11 to monitor the following signals:

a. SXT Trunnion MDA Tach Mon. on CHANNEL 2
b. SCT Trunnion MDA Tach Mon. on CHANNEL 5

7. Set SCOPE "A" INPUT switch on Primary Signal Selector panel to SIG 2 and CROSSBAR CONTROL to 14 to monitor the SXT Trunnion MDA Output Mon. on Oscilloscope.

8. Press CHART SPEEDS 5 pushbutton on Oscillograph Control panel. Set CHANNEL 2 sensitivity on the Oscillograph Amplifier panel to 500 MV/MM and CHANNEL 5 sensitivity to 200 MV/MM.

NOTE: Step 9 applies to Indicator Control panel 2021290 only.

9. Set OPTICS ZERO switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS ZERO switch to OFF.

NOTE: Step 9A applies to all Indicator Control panels except 2021290.

9A. Set OPTICS MODE switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS MODE switch to MAN.

10. Start Oscillograph by setting CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

11. Measure and record the steady state peak to peak voltage indicated on the Oscilloscope while holding the Optics Hand Controller to the upper limit not longer than 5 seconds. Release the Optics Hand Controller and set CHART DRIVE switch to OFF. Set all sensitivities on Oscillograph Amplifier panel to OFF and record maximum steady state indications of CHANNELS 2 and 5.

12. Set CHANNEL 1 switch on Oscillograph Signal Selector panel to 13 to monitor the SCT Shaft MDA Tach Mon. signal on CHANNEL 1.

13. Set CHANNEL 1 sensitivity on Oscillograph Amplifier panel to 500 MV/MM.

14. Set SCOPE "A" INPUT switch on Primary Signal Selector panel to SIG 1 and

DATE 30 JUN 66

JOB OPTICS SLEW RATE TEST

JDC 12213 REV W PAGE 3 OF 10

SUBSYSTEM G AND N SYSTEM

ASSY

CROSSBAR CONTROL to 14 to monitor the SXT Shaft MDA Output Mon. on Oscilloscope.

14A. Using the Optics Hand Controller, position the SXT Trunnion between 0° and 10° as indicated by the Trunnion TPAC.

NOTE: Step 15 applies to Indicator Control panel 2021290 only.

15. Set OPTICS ZERO switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS ZERO switch to OFF.

NOTE: Step 15A applies to all Indicator Control panels except 2021290.

15A. Set OPTICS MODE switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS MODE switch to MAN.

16. Start the Oscillograph by setting CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

17. Measure and record the steady state peak to peak voltage indicated on the Oscilloscope while holding the Optics Hand Controller to the right limit not longer than 10 seconds. Release the Optics Hand Controller and set CHART DRIVE switch to OFF. Set all sensitivities on Oscillograph Amplifier panel to OFF and record the maximum steady state indications of CHANNEL 1.

18. Set the CHANNEL 1 switch on the Oscillograph Signal Selector panel to 12 to monitor the SXT Shaft MDA Tach Mon. voltage on CHANNEL 1.

19. Set CHANNEL 1 sensitivity to 500 mv/mm on the Oscillograph Amplifier panel.

20. Start the Oscillograph by setting the CHART DRIVE switch on the Oscillograph Control panel to MM/SEC.

21. Hold Optics Hand Controller to the left limit not longer than 10 seconds. Release Optics Hand Controller.

22. Stop Oscillograph and record maximum steady state indication on CHANNEL 1.

MEDIUM SPEED SLEW RATE

23. Set VOLTMETER INPUT PAVM switch on Primary Signal Selector panel to SIG 1 and CROSSBAR CONTROL to 05. Set PAVM FUNCTION selector to 0° to monitor in-phase voltage of the SCT Trunnion MDA Tach Mon.

NOTE: Step 24 applies to Indicator Control panel 2021290 only.

24. Set OPTICS ZERO switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS ZERO switch to OFF. Set OPTICS SPEED switch to MED.

NOTE: Step 24A applies to all Indicator Control panels except 2021290.

24A. Set OPTICS MODE switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS MODE switch to MAN. Set OPTICS CONTROLLER SPEED switch to MED.

25. Measure and record the voltage indicated on the PAVM while holding the Optics

DATE 30 JUN 63

JOB OPTICS SLEW RATE TEST

JDC 12213 REV W PAGE 4 OF 10

SUBSYSTEM G AND N SYSTEM

ASSY

Hand Controller to the upper limit not longer than 20 seconds. Release the Optics hand controller.

26. Set CHANNEL 5 switch to 11 on Oscillograph Signal Selector panel to monitor the SCT Trunnion MDA TACH Mon.

27. Set VOLTMETER INPUT PAVM switch on Primary Signal Selector panel SIG 2 and CROSSBAR CONTROL to 09 to monitor the SXT Trunnion MDA TACH Mon.

28. Set CHANNEL 5 sensitivity to 10 MV/MM on Oscillograph Amplifier panel. Press CHART SPEEDS 20 pushbutton on the Oscillograph Control Panel and set CHART DRIVE switch to MM/SEC.

29. Measure and record the voltage indicated on the PAVM while holding the Optics Hand Controller to the lower limit not longer than 20 seconds. Release the Optics Hand Controller and set CHART DRIVE switch to OFF. Set all sensitivities on Oscillograph Amplifier panel to OFF and record steady state indication of CHANNEL 5 per Figure 1. Record maximum width of any pulses at 1/2 positive peak or 1/2 negative peak points on CHANNEL 5 per Figure 1. If no pulses occur, write none on the data sheet.

30. Deleted.

31. Set VOLTMETER INPUT PAVM switch on Primary Signal Selector panel to SIG 2 and CROSSBAR CONTROL to 04 to monitor the SCT Shaft MDA Tach Mon.

NOTE: Step 32 applies to Indicator Control panel 2021290 only.

32. Set OPTICS ZERO switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS ZERO switch to OFF.

NOTE: Step 32A applies to all Indicator Control panels except 2021290.

32A. Set OPTICS MODE switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS MODE switch to MAN.

33. Measure and record the voltage indicated on the PAVM while holding the Optics Hand Controller to the right limit not longer than 20 seconds. Release the Optics Hand Controller.

34. Set CHANNEL 1 switch to 13 on Oscillograph Signal Selector panel to monitor the SCT Shaft MDA TACH Mon.

35. Set VOLTMETER INPUT PAVM switch on Primary Signal Selector panel to SIG 2 and CROSSBAR CONTROL to 07 to monitor the SXT Shaft MDA Tach Mon.

36. Set CHANNEL 1 sensitivity to 20 MV/MM on Oscillograph Amplifier panel and set CHART DRIVE switch to MM/SEC.

37. Measure and record the voltage indicated on the PAVM while holding the Optics Hand Controller to the left limit not longer than 20 seconds. Release the Optics Hand Controller and set CHART DRIVE switch to OFF. Set all sensitivities on Oscillograph Amplifier panel to OFF and record steady state indication of CHANNEL 1 per Figure 1. Record maximum width of any pulses at 1/2 positive peak or 1/2 negative peak points on

DATE 30 JUN 66

CHANNEL 1 per Figure 1. If no pulses occur, write none on the data sheet.

LOW SPEED SLEW RATE

38. Set VOLTMETER INPUT PAVM switch on Primary Signal Selector panel to SIG 2 and CROSSBAR CONTROL to 06 to monitor the CDU Trunnion Fine Error.

39. Set the DEGREES dial on the PAVM to 50.

NOTE: Step 40 applies to Indicator Control panel 2021290 only.

40. Set OPTICS ZERO switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS ZERO switch to OFF. Set OPTICS SPEED switch to LO.

NOTE: Step 40A applies to all Indicator Control panels except 2021290.

40A. Set OPTICS MODE switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS MODE switch to MAN. Set OPTICS CONTROLLER SPEED switch to LO.

41. Measure and record the steady state voltage and sign indicated on the PAVM while holding Optics Hand Controller to the upper limit.

41A. Measure and record the steady state voltage and sign indicated on the PAVM while holding Optics Hand Controller to the lower limit.

41B. Release Optics Hand Controller. Add the absolute value recorded in step 41 to the absolute value recorded in step 41A. Record the result.

42. Set the DEGREES dial on the PAVM to 0.

43. Set VOLTMETER INPUT PAVM switch to SIG 1 and CROSSBAR CONTROL to 05 to monitor the SCT Trunnion MDA Tach Mon.

44. Set the CHANNEL 2 switch to 12 and the CHANNEL 5 switch to 11 on the Oscillograph Signal Selector panel to monitor:

a. SXT Trun MDA Tach Mon. on CHANNEL 2

b. SCT Trun MDA Tach Mon. on CHANNEL 5

45. Set CHANNEL 2 sensitivity to 10 MV/MM and CHANNEL 5 sensitivity to 5 MV/MM on Oscillograph Amplifier panel and set CHART DRIVE switch to MM/SEC.

46. Measure and record the steady state voltage indicated on the PAVM while holding the Optics Hand Controller to the upper limit until the SXT Trunnion reaches 85° LOS as indicated by the Trunnion TPAC. Release the Optics Hand Controller.

47. Set CHART DRIVE switch on Oscillograph Control panel to OFF. Set all sensitivities on Oscillograph Amplifier to OFF. Record steady state indication of CHANNELS 2 and 5 per Figure 1. Record maximum width of any pulses at 1/2 positive peak or 1/2 negative peak points on CHANNELS 2 and 5 per Figure 1.

47A. Measure and record the steady state voltage indicated on PAVM while holding Optics Hand Controller to lower limit. Release Optics Hand Controller.

47B. Add the absolute value recorded in step 46 to the absolute value recorded in step 47A and divide by two. Record results as average value of SCT Trun MDA Tach Mon.

48. Set CHANNEL 1 switch on Oscillograph Signal Selector panel to 12 to monitor SXT Shaft MDA Tach Mon. signal on CHANNEL 1.

49. Set VOLTMETER INPUT PAVM switch on Primary Signal Selector panel to SIG 2 and CROSSBAR CONTROL to 05 to monitor the CDU Shaft Fine Error.

50. Using the Optics Hand Controller with the OPTICS SPEED switch set to HI, position the SXT Trunnion between 0° and 10° as indicated by the Trunnion TPAC.

NOTE: Step 51 applies to Indicator Control panel 2021290 only.

51. Set OPTICS ZERO switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS ZERO switch to OFF.

NOTE: Step 51A applies to all Indicator Control panels except 2021290.

51A. Set OPTICS MODE switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS MODE switch to MAN.

52. Connect the PSA TPA #2 output TB3-32 (RED) HI and TB3-28 (BLK) LO to the Buffered Probe input J7 HI and J8 LO.

53. On the AUX INPUT PANEL, connect the Buffered Probe output to the Channel 3 AC input, to monitor the SCT Shaft MDA TACH Mon. signal on CHANNEL 3. Set the CHANNEL 3 switch on the AUX INPUT PANEL to OSS 800 cps. Set CHANNEL 3 switch on Oscillograph Signal Selector panel to 15.

54. Set CHANNEL 1 sensitivity to 10 MV/MM and CHANNEL 3 sensitivity to 5 MV/MM on Oscillograph Amplifier panel.

55. Holding the Optics Hand Controller to the left with the OPTICS SPEED switch set to HI, position the SXT Shaft to (-180° ± 1°) indicated by the Shaft TPAC. Return the OPTICS SPEED SWITCH to LO.

56. Start the Oscillograph by setting CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

57. Measure and record the steady state voltage indicated on the PAVM while holding the Optics Hand Controller to right limit. Continue holding Optics Hand Controller to right limit until SXT Shaft reaches +180° as indicated by the Shaft TPAC.

58. Release the Optics Hand Controller and set CHART DRIVE switch to OFF.

59. Set all sensitivities on Oscillograph Amplifier panel to OFF and record steady state indications of CHANNEL 1 and CHANNEL 3 per Figure 1. Record the maximum width of any pulses at 1/2 positive peak or 1/2 negative peak points of CHANNEL 1 and CHANNEL 3 per Figure 1.

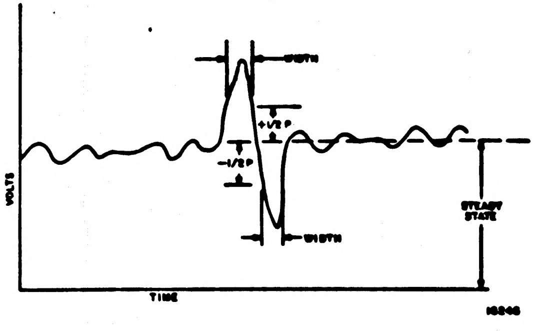

Figure 1. Signal Characteristics Diagram

NOTE: Step 60 applies to Indicator Control panel 2021290 only.

60. Set OPTICS ZERO switch on Indicator Control panel to ZERO. Wait 20 seconds before proceeding.

NOTE: Step 60A applies to all Indicator Control panels except 2021290.

60A. Set OPTICS MODE switch on Indicator Control panel to ZERO. Wait 20 seconds before proceeding.

61. Set CROSSBAR CONTROL on Primary Signal Selector panel to the following positions and measure the quadrature voltage indicated on the PAVM.

Signal	CROSSBAR CONTROL
a. SCT Trun MDA P/A Mon.	103
b. SXT Shaft MDA P/A Mon.	203
c. SXT Trun MDA P/A Mon.	106
d. SCT Shaft MDA P/A Mon.	210

NOTE: Step 62 applies to Indicator Control panel 2021290 only.

62. Set OPTICS ZERO switch on Indicator Control panel to OFF.

NOTE: Step 62A applies to all Indicator Control panels except 2021290.

62A. Set OPTICS MODE switch on Indicator Control panel to MAN.

63. Press MARK pushbutton. Observe DSKY displays VERB 06 NOUN 56 and data in the following form:

a. Row 1 = ±XXX.XX (Shaft angle in degrees)

b. Row 2 = ±XX.XXX (Trunnion angle in degrees)

c. Row 3 = XXX.XX (Time in seconds)

Record Row 1, Row 2, and Row 3 indications.

64. Approximately 60 seconds after first mark, press MARK pushbutton again and record new Row 1, Row 2, and Row 3 indications.

NOTE: Step 65 applies to Indicator Control panel 2021290 only.

65. Set OPTICS ZERO switch on Indicator Control panel to ZERO.

NOTE: Step 65A applies to all Indicator Control panels except 2021290.

65A. Set OPTICS MODE switch on Indicator Control panel to ZERO.

CALCULATIONS

66. Perform the following calculations for hand controller drift rates:

a. Δ Shaft angle = step 64.a - step 63.a

b. Δ Trunnion angle = step 64.b - step 63.b

NOTE: If step 64.c is less than step 63.c, add 163.84 seconds to step 64.c.

c. Δ Time = step 64.c - step 63.c

d. Shaft drift rate = $\frac{\Delta \text{ Shaft angle}}{\Delta \text{ Time}}$

e. Trunnion drift rate = $\frac{\Delta \text{ Trunnion angle}}{\Delta \text{ Time}}$

NOTE: Steps 67 through 83 apply only if the Indicator Control panel has ECP 792 installed.

COMPUTER AIDED OPTICS TRACKING

67. Set OPTICS ZERO switch on Indicator Control panel to OFF.

68. Set OPTICS MODE switch on Indicator Control panel to CMC and perform the following DSKY operations:

a. VERB 41 NOUN 55 ENTR
b. +00000 ENTR
c. +00000 ENTR

69. Set OPTICS MODE switch on Indicator Control panel to MAN.

NOTE: Step 70 must be completed within one minute after completing step 69.

70. Perform the following DSKY operations:

a. VERB 21 NOUN 10 ENTR
b. 00012 ENTR
c. 00002 ENTR
d. VERB 16 NOUN 55 ENTR

71. When DSKY display settles out, record the contents of Row 1 and Row 2.

72. Perform the following DSKY operations:

a. VERB 24 NOUN 01 ENTR
b. 00053 ENTR
c. 00360 ENTR
d. 00360 ENTR
e. VERB 21 NOUN 10 ENTR
f. 00012 ENTR
g. 00002 ENTR ENTR
h. 00014 ENTR
i. 06000 ENTR
j. Press KEY RELEASE

73. When DSKY display settles out, record the contents of Row 1 and Row 2.

74. Perform the following calculations:

a. Shaft = Row 1, step 73 minus Row 1, step 71.
b. Trunnion = Row 2, step 73 minus Row 2, step 71.

75. Set OPTICS SPEED switch on Indicator Control panel to MED.

76. Set OPTICS COUPLING switch on Indicator Control panel to DIRECT.

77. Hold the Optics Hand Controller to the right limit and record the contents of Row 1 on the DSKY. Release the Optics Hand Controller.

78. Hold the Optics Hand Controller to the left limit and record the contents of Row 1 on the DSKY. Release the Optics Hand Controller.

79. Perform the following calculations:

a. Increasing Shaft Δ angle = Row 1, step 77 minus Row 1, step 73.
b. Decreasing Shaft Δ angle = Row 1, step 78 minus Row 1, step 73.

80. Hold the Optics Hand Controller to the upper limit and record the contents of Row 2 on the DSKY. Release the Optics Hand Controller.

81. Hold the Optics Hand Controller to the lower limit and record the contents of Row 2 on the DSKY. Release the Optics Hand Controller.

82. Perform the following calculations:

a. Increasing Trunnion Δ angle = Row 2, step 80 minus Row 2, step 73.
b. Decreasing Trunnion Δ angle = Row 2, step 81 minus Row 2, step 73.

83. Perform the following DSKY operations:

a. VERB 21 NOUN 10 ENTR
b. 00012 ENTR
c. 00002 ENTR

NOTE: Step 84 applies only when Restart Monitor module (2898989) is installed.

84. Perform the following DSKY operations:

a. VERB 01 NOUN 10 ENTR
b. 00077 ENTR
c. The contents of Row 1 shall be 00000.

---

85. Press to extinguish OPTICS POWER ON pushbutton on the Test Control panel.

CAUTION: Use extreme care when tilting G&N Mounting Fixture to insure that components do not strike locking handles.

86. Return the G&N Mounting Fixture to the 32.5° position.

IMPORTANT Avoid slewing of SXT shaft and trunnion axes into their mechanical stops.

INTERVAL

TOOLS AND MATERIAL

NOTE: 1. Use extreme care when tilting G&N Mounting Fixture to insure that components do not strike crade locking handles.

2. The G&N Mounting Fixture shall be set at the 90.0° position. Care must be taken to prevent gimbal lock (see JDC 12215).

3. Oscillograph Amplifier sensitivities stated herein are nominal and may be adjusted at the discretion of the operator.

INITIALIZATION

1. Perform JDC 12215 to establish a Master Initialization condition.

2. Press to light OPTICS POWER ON pushbutton on Test Control panel.

NOTE: Step 3 applies to Indicator Control panel 2021290 only.

3. Set switches on Indicator Control panel as follows:

a. OPTICS ZERO to OFF
b. OPTICS TEL TRUN to SLAVE TO SXT
c. OPTICS COUPLING to DIRECT
d. OPTICS MODE to MAN
e. OPTICS SPEED to HI

NOTE: Step 3A applies to all Indicator Control panels except 2021290.

3A. Set switches on Indicator Control panel,

VERIFICATION WITH SIDL REQUIRED BEFORE USE

DATE 30 JUN 66

JOB OPTICS SLEW RATE TEST

JDC 12213 REV Y PAGE 2 OF 10

SUBSYSTEM G AND N SYSTEM

ASSY

as follows:

a. OPTICS MODE to MAN
b. OPTICS CONTROLLER SPEED to HI
c. OPTICS CONTROLLER COUPLING to DIRECT
d. OPTICS TRACKER to OFF
e. OPTICS TELESCOPE TRUNNION to SLAVE TO SXT

4. Insure CH4 AC, CH5 AC, CH6 AC, 800 ~ 0 PH REFERENCE, and OPT 800 ~ TO PH GEN pushbuttons on Oscillograph Signal Selector panel are lighted.

5. Insure SCT TRUN, SXT SHAFT, and SXT TRUN switches on PSA Test Point Adapter are set to 1:1.

HIGH SPEED SLEW RATE

6. Set CHANNEL 2 switch on Oscillograph Signal Selector panel to 12 and CHANNEL 5 switch to 11 to monitor the following signals:

a. SXT Trunnion MDA Tach Mon. on CHANNEL 2
b. SCT Trunnion MDA Tach Mon. on CHANNEL 5

7. Set SCOPE "A" INPUT switch on Primary Signal Selector panel to SIG 2 and CROSSBAR CONTROL to 14 to monitor the SXT Trunnion MDA Output Mon. on Oscilloscope.

8. Press CHART SPEEDS 5 pushbutton on Oscillograph Control panel. Set CHANNEL 2 sensitivity on the Oscillograph Amplifier panel to 500 MV/MM and CHANNEL 5 sensitivity to 200 MV/MM.

NOTE: Step 9 applies to Indicator Control panel 2021290 only.

9. Set OPTICS ZERO switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS ZERO switch to OFF.

NOTE: Step 9A applies to all Indicator Control panels except 2021290.

9A. Set OPTICS MODE switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS MODE switch to MAN.

10. Start Oscillograph by setting CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

11. Measure and record the steady state peak to peak voltage indicated on the Oscilloscope while holding the Optics Hand Controller to the upper limit not longer than 5 seconds. Release the Optics Hand Controller and set CHART DRIVE switch to OFF. Set all sensitivities on Oscillograph Amplifier panel to OFF and record maximum steady state indications of CHANNELS 2 and 5.

12. Set CHANNEL 1 switch on Oscillograph Signal Selector panel to 13 to monitor the SCT Shaft MDA Tach Mon. signal on CHANNEL 1.

13. Set CHANNEL 1 sensitivity on Oscillograph Amplifier panel to 500 MV/MM.

14. Set SCOPE "A" INPUT switch on Primary Signal Selector panel to SIG 1 and

DATE 30 JUN 66

JOB OPTICS SLEW RATE TEST

JDC 12213 REV Y PAGE 3 OF 10

SUBSYSTEM G AND N SYSTEM

ASSY

CROSSBAR CONTROL to 14 to monitor the SXT Shaft MDA Output Mon. on Oscilloscope.

14A. Using the Optics Hand Controller, position the SXT Trunnion between 0° and 10° as indicated by the Trunnion TPAC.

NOTE: Step 15 applies to Indicator Control panel 2021290 only.

15. Set OPTICS ZERO switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS ZERO switch to OFF.

NOTE: Step 15A applies to all Indicator Control panels except 2021290.

15A. Set OPTICS MODE switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS MODE switch to MAN.

16. Start the Oscillograph by setting CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

17. Measure and record the steady state peak to peak voltage indicated on the Oscilloscope while holding the Optics Hand Controller to the right limit not longer than 10 seconds. Release the Optics Hand Controller and set CHART DRIVE switch to OFF. Set all sensitivities on Oscillograph Amplifier panel to OFF and record the maximum steady state indications of CHANNEL 1.

18. Set the CHANNEL 1 switch on the Oscillograph Signal Selector panel to 12 to monitor the SXT Shaft MDA Tach Mon. voltage on CHANNEL 1.

19. Set CHANNEL 1 sensitivity to 500 mv/mm on the Oscillograph Amplifier panel.

20. Start the Oscillograph by setting the CHART DRIVE switch on the Oscillograph Control panel to MM/SEC.

21. Hold Optics Hand Controller to the left limit not longer than 10 seconds. Release Optics Hand Controller.

22. Stop Oscillograph and record maximum steady state indication on CHANNEL 1.

MEDIUM SPEED SLEW RATE

23. Set VOLTMETER INPUT PAVM switch on Primary Signal Selector panel to SIG 1 and CROSSBAR CONTROL to 05. Set PAVM FUNCTION selector to 0° to monitor in-phase voltage of the SCT Trunnion MDA Tach Mon.

NOTE: Step 24 applies to Indicator Control panel 2021290 only.

24. Set OPTICS ZERO switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS ZERO switch to OFF. Set OPTICS SPEED switch to MED.

NOTE: Step 24A applies to all Indicator Control panels except 2021290.

24A. Set OPTICS MODE switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS MODE switch to MAN. Set OPTICS CONTROLLER SPEED switch to MED.

25. Measure and record the voltage indicated on the PAVM while holding the Optics

JOB OPTICS SLEW RATE TEST

JDC 12213 REV Y PAGE 4 OF 10

SUBSYSTEM G AND N SYSTEM

ASSY

Hand Controller to the upper limit not longer than 20 seconds. Release the Optics hand controller.

26. Set CHANNEL 5 switch to 11 on Oscillograph Signal Selector panel to monitor the SCT Trunnion MDA TACH Mon.

27. Set VOLTMETER INPUT PAVM switch on Primary Signal Selector panel SIG 2 and CROSSBAR CONTROL to 09 to monitor the SXT Trunnion MDA TACH Mon.

28. Set CHANNEL 5 sensitivity to 10 MV/MM on Oscillograph Amplifier panel. Press CHART SPEEDS 20 pushbutton on the Oscillograph Control Panel and set CHART DRIVE switch to MM/SEC.

29. Measure and record the voltage indicated on the PAVM while holding the Optics Hand Controller to the lower limit not longer than 20 seconds. Release the Optics Hand Controller and set CHART DRIVE switch to OFF. Set all sensitivities on Oscillograph Amplifier panel to OFF and record steady state indication of CHANNEL 5 per Figure 1. Record maximum width of any pulses at 1/2 positive peak or 1/2 negative peak points on CHANNEL 5 per Figure 1. If no pulses occur, write none on the data sheet.

30. Deleted.

31. Set VOLTMETER INPUT PAVM switch on Primary Signal Selector panel to SIG 2 and CROSSBAR CONTROL to 04 to monitor the SCT Shaft MDA Tach Mon.

NOTE: Step 32 applies to Indicator Control panel 2021290 only.

32. Set OPTICS ZERO switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS ZERO switch to OFF.

NOTE: Step 32A applies to all Indicator Control panels except 2021290.

32A. Set OPTICS MODE switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS MODE switch to MAN.

33. Measure and record the voltage indicated on the PAVM while holding the Optics Hand Controller to the right limit not longer than 20 seconds. Release the Optics Hand Controller.

34. Set CHANNEL 1 switch to 13 on Oscillograph Signal Selector panel to monitor the SCT Shaft MDA TACH Mon.

35. Set VOLTMETER INPUT PAVM switch on Primary Signal Selector panel to SIG 2 and CROSSBAR CONTROL to 07 to monitor the SXT Shaft MDA Tach Mon.

36. Set CHANNEL 1 sensitivity to 20 MV/MM on Oscillograph Amplifier panel and set CHART DRIVE switch to MM/SEC.

37. Measure and record the voltage indicated on the PAVM while holding the Optics Hand Controller to the left limit not longer than 20 seconds. Release the Optics Hand Controller and set CHART DRIVE switch to OFF. Set all sensitivities on Oscillograph Amplifier panel to OFF and record steady state indication of CHANNEL 1 per Figure 1. Record maximum width of any pulses at 1/2 positive peak or 1/2 negative peak points on

DATE 30 JUN 66

CHANNEL 1 per Figure 1. If no pulses occur, write none on the data sheet.

LOW SPEED SLEW RATE

38. Set VOLTMETER INPUT PAVM switch on Primary Signal Selector panel to SIG 2 and CROSSBAR CONTROL to 06 to monitor the CDU Trunnion Fine Error.

39. Set the DEGREES dial on the PAVM to 50.

NOTE: Step 40 applies to Indicator Control panel 2021290 only.

40. Set OPTICS ZERO switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS ZERO switch to OFF. Set OPTICS SPEED switch to LO.

NOTE: Step 40A applies to all Indicator Control panels except 2021290.

40A. Set OPTICS MODE switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS MODE switch to MAN. Set OPTICS CONTROLLER SPEED switch to LO.

41. Measure and record the steady state voltage and sign indicated on the PAVM while holding Optics Hand Controller to the upper limit.

41A. Measure and record the steady state voltage and sign indicated on the PAVM while holding Optics Hand Controller to the lower limit.

41B. Release Optics Hand Controller. Add the absolute value recorded in step 41 to the absolute value recorded in step 41A. Record the result.

42. Set the DEGREES dial on the PAVM to 0.

43. Set VOLTMETER INPUT PAVM switch to SIG 1 and CROSSBAR CONTROL to 05 to monitor the SCT Trunnion MDA Tach Mon.

44. Set the CHANNEL 2 switch to 12 and the CHANNEL 5 switch to 11 on the Oscillograph Signal Selector panel to monitor:

a. SXT Trun MDA Tach Mon. on CHANNEL 2

b. SCT Trun MDA Tach Mon. on CHANNEL 5

45. Set CHANNEL 2 sensitivity to 10 MV/MM and CHANNEL 5 sensitivity to 5 MV/MM on Oscillograph Amplifier panel and set CHART DRIVE switch to MM/SEC.

46. Measure and record the steady state voltage indicated on the PAVM while holding the Optics Hand Controller to the upper limit until the SXT Trunnion reaches 85° LOS as indicated by the Trunnion TPAC. Release the Optics Hand Controller.

47. Set CHART DRIVE switch on Oscillograph Control panel to OFF. Set all sensitivities on Oscillograph Amplifier to OFF. Record steady state indication of CHANNELS 2 and 5 per Figure 1. Record maximum width of any pulses at 1/2 positive peak or 1/2 negative peak points on CHANNELS 2 and 5 per Figure 1.

47A. Measure and record the steady state voltage indicated on PAVM while holding Optics Hand Controller to lower limit. Release Optics Hand Controller.

47B. Add the absolute value recorded in step 46 to the absolute value recorded in step 47A and divide by two. Record results as average value of SCT Trun MDA Tach Mon.

48. Set CHANNEL 1 switch on Oscillograph Signal Selector panel to 12 to monitor SXT Shaft MDA Tach Mon. signal on CHANNEL 1.

49. Set VOLTMETER INPUT PAVM switch on Primary Signal Selector panel to SIG 2 and CROSSBAR CONTROL to 05 to monitor the CDU Shaft Fine Error.

50. Using the Optics Hand Controller with the OPTICS SPEED switch set to HI, position the SXT Trunnion between 0° and 10° as indicated by the Trunnion TPAC.

NOTE: Step 51 applies to Indicator Control panel 2021290 only.

51. Set OPTICS ZERO switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS ZERO switch to OFF.

NOTE: Step 51A applies to all Indicator Control panels except 2021290.

51A. Set OPTICS MODE switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS MODE switch to MAN.

52. Connect the PSA TPA #2 output TB3-32 (RED) HI and TB3-28 (BLK) LO to the Buffered Probe input J7 HI and J8 LO.

53. On the AUX INPUT PANEL, connect the Buffered Probe output to the Channel 3 AC input, to monitor the SCT Shaft MDA TACH Mon. signal on CHANNEL 3. Set the CHANNEL 3 switch on the AUX INPUT PANEL to OSS 800 cps. Set CHANNEL 3 switch on Oscillograph Signal Selector panel to 15.

54. Set CHANNEL 1 sensitivity to 10 MV/MM and CHANNEL 3 sensitivity to 5 MV/MM on Oscillograph Amplifier panel.

55. Holding the Optics Hand Controller to the left with the OPTICS SPEED switch set to HI, position the SXT Shaft to (-180° ± 1°) indicated by the Shaft TPAC. Return the OPTICS SPEED SWITCH to LO.

56. Start the Oscillograph by setting CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

57. Measure and record the steady state voltage indicated on the PAVM while holding the Optics Hand Controller to right limit. Continue holding Optics Hand Controller to right limit until SXT Shaft reaches +180° as indicated by the Shaft TPAC.

58. Release the Optics Hand Controller and set CHART DRIVE switch to OFF.

59. Set all sensitivities on Oscillograph Amplifier panel to OFF and record steady state indications of CHANNEL 1 and CHANNEL 3 per Figure 1. Record the maximum width of any pulses at 1/2 positive peak or 1/2 negative peak points of CHANNEL 1 and CHANNEL 3 per Figure 1.

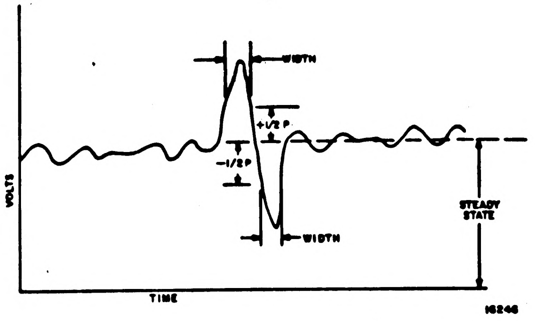

Figure 1. Signal Characteristics Diagram

NOTE: Step 60 applies to Indicator Control panel 2021290 only.

60. Set OPTICS ZERO switch on Indicator Control panel to ZERO. Wait 20 seconds before proceeding.

NOTE: Step 60A applies to all Indicator Control panels except 2021290.

60A. Set OPTICS MODE switch on Indicator Control panel to ZERO. Wait 20 seconds before proceeding.

61. Set CROSSBAR CONTROL on Primary Signal Selector panel to the following positions and measure the quadrature voltage indicated on the PAVM.

	Signal	CROSSBAR CONTROL
a.	SCT Trun MDA P/A Mon.	103
b.	SXT Shaft MDA P/A Mon.	203
c.	SXT Trun MDA P/A Mon.	106
d.	SCT Shaft MDA P/A Mon.	210

NOTE: Step 62 applies to Indicator Control panel 2021290 only.

62. Set OPTICS ZERO switch on Indicator Control panel to OFF. Set OPTICS CONTROLLER SPEED switch to LO.

NOTE: Step 62A applies to all Indicator Control panels except 2021290.

62A. Set OPTICS MODE switch on Indicator Control panel to MAN. Set OPTICS CONTROLLER SPEED switch to LO.

63. Press MARK pushbutton. Observe DSKY displays VERB 06 NOUN 56 and data in the following form:

a. Row 1 = ±XXX.XX (Shaft angle in degrees)

b. Row 2 = ±XX.XXX (Trunnion angle in degrees)

c. Row 3 = XXX.XX (Time in seconds)

Record Row 1, Row 2, and Row 3 indications.

64. Approximately 60 seconds after first mark, press MARK pushbutton again and record new Row 1, Row 2, and Row 3 indications.

NOTE: Step 65 applies to Indicator Control panel 2021290 only.

65. Set OPTICS ZERO switch on Indicator Control panel to ZERO.

NOTE: Step 65A applies to all Indicator Control panels except 2021290.

65A. Set OPTICS MODE switch on Indicator Control panel to ZERO.

CALCULATIONS

66. Perform the following calculations for hand controller drift rates:

a. Δ Shaft angle = step 64.a - step 63.a

b. Δ Trunnion angle = step 64.b - step 63.b

NOTE: If step 64.c is less than step 63.c, add 163.84 seconds to step 64.c.

c. Δ Time = step 64.c - step 63.c

d. Shaft drift rate = $\frac{\Delta \text{ Shaft angle}}{\Delta \text{ Time}}$

e. Trunnion drift rate = $\frac{\Delta \text{ Trunnion angle}}{\Delta \text{ Time}}$

NOTE: Steps 67 through 83 apply only if the Indicator Control panel has ECP 792 installed.

COMPUTER AIDED OPTICS TRACKING

67. Set OPTICS ZERO switch on Indicator Control panel to OFF.

68. Set OPTICS MODE switch on Indicator Control panel to CMC and perform the following DSKY operations:

a.	VERB 41	NOUN 55	ENTR
b.	+00000		ENTR
c.	+00000		ENTR

69. Set OPTICS MODE switch on Indicator Control panel to MAN.

NOTE: Step 70 must be completed within one minute after completing step 69.

70. Perform the following DSKY operations:

a.	VERB 21	NOUN 10	ENTR
b.	00012		ENTR
c.	00002		ENTR
d.	VERB 16	NOUN 55	ENTR

NOTE: In step 71, display may cycle one ECDU bit (R1= ± 000. 01°; R1= ± 00. 003°). Record display for larger positive or negative incremental difference from 00000.

71. When DSKY display settles out, record the contents of Row 1 and Row 2.

72. Perform the following DSKY operations:

a. VERB 24 NOUN 01 ENTR
b. 00053 ENTR
c. 00360 ENTR
d. 00360 ENTR
e. VERB 21 NOUN 10 ENTR
f. 00012 ENTR
g. 00002 ENTR ENTR
h. 00014 ENTR
i. 06000 ENTR
j. Press KEY RELEASE

73. When DSKY display settles out, record the contents of Row 1 and Row 2.

74. Perform the following calculations:

a. Shaft = Row 1, step 73 minus Row 1, step 71.
b. Trunnion = Row 2, step 73 minus Row 2, step 71.

75. Set OPTICS SPEED switch on Indicator Control panel to MED.

76. Set OPTICS COUPLING switch on Indicator Control panel to DIRECT.

77. Hold the Optics Hand Controller to the right limit and record the contents of Row 1 on the DSKY. Release the Optics Hand Controller. ______

78. Hold the Optics Hand Controller to the left limit and record the contents of Row 1 on the DSKY. Release the Optics Hand Controller. ______

79. Perform the following calculations:

a. Increasing Shaft Δ angle = Row 1, step 77 minus Row 1, step 73.
b. Decreasing Shaft Δ angle = Row 1, step 78 minus Row 1, step 73.

80. Hold the Optics Hand Controller to the upper limit and record the contents of Row 2 on the DSKY. Release the Optics Hand Controller.

81. Hold the Optics Hand Controller to the lower limit and record the contents of Row 2 on the DSKY. Release the Optics Hand Controller.

82. Perform the following calculations:

a. Increasing Trunnion Δ angle = Row 2, step 80 minus Row 2, step 73.
b. Decreasing Trunnion Δ angle = Row 2, step 81 minus Row 2, step 73.

83. Perform the following DSKY operations:

a. VERB 21 NOUN 10 ENTR
b. 00012 ENTR
c. 00002 ENTR

NOTE: Step 84 applies only when Restart Monitor module (2898989) is installed.

84. Perform the following DSKY operations:

a. VERB 01 NOUN 10 ENTR
b. 00077 ENTR
c. The contents of Row 1 shall be 00000.

---

85. Press to extinguish OPTICS POWER ON pushbutton on the Test Control panel.

CAUTION: Use extreme care when tilting G&N Mounting Fixture to insure that components do not strike locking handles.

86. Return the G&N Mounting Fixture to the 32.5° position.

IMPORTANT

INTERVAL

TOOLS AND MATERIAL

NOTE: OSCILLOGRAPH AMPLIFIER sensitivities stated herein are nominal and may be adjusted at the discretion of the operator.

INITIALIZATION

1. Establish a Master Initialization condition.

2. Insure that the TELESCOPE TRUNNION switch on the Indicator Control panel is set to SLAVE TO SXT and the TRACKER switch is set to OFF.

3. Insure that CH4 AC, CH5 AC, CH6 AC, 800 ~ 0 RH REFERENCE and OPT 800 ~ PH GEN pushbuttons on oscillograph signal selector panel are lighted and SCT TRUN, SXT SHAFT and SXT TRUN switches on PSA Test Point Adapter are set to 1:1.

HIGH SPEED SLEW RATE

4. Set the CHANNEL 2 switch on the Oscillograph signal selector panel to 12 and CHANNEL 5 switch to 11, and monitor the following signals:

a. SXT Trunnion MDA Tach Mon. on CHANNEL 2.

b. SCT Trunnion MDA Tach Mon. on CHANNEL 5.

5. Perform the following DSKY operations:

a. VERB 16 NOUN 55 ENTR

b. Observe SXT SHAFT ANGLE Displayed on Row 1.

c. Observe SXT TRN LOS Angle Displayed Row 2.

VERIFICATION WITH SIDL REQUIRED BEFORE USE

6. Set the OPTICS MODE switch on the Indicator Control panel to ZERO.

7. Press CHART SPEEDS 5 pushbutton on the Oscillograph control panel and set CHANNEL 2 sensitivity on the Oscillograph Amplifier panel to 500 MV/MM and CHANNEL 5 sensitivity to 200 mv/mm.

8. Set SCOPE "A" INPUT to SIG 2 and CROSSBAR CONTROL to 14 on Primary Signal Selector panel to monitor SXT Trunnion MDA Output Mon. on Oscilloscope.

9. Set CONTROLLER COUPLING switch to DIRECT, CONTROLLER SPEED to HI, and after DSKY displays all zeroes on Row 1 and Row 2, set OPTICS MODE switch to MAN on Indicator Control panel.

10. Start oscillograph by setting CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

11. Measure and record the steady state peak to peak voltage indicated on the Oscilloscope while holding the Optics hand controller to the upper limit not longer than 10 seconds. Release the Optics hand Controller and set CHART DRIVE switch to OFF. Set all sensitivities on Oscillograph Amplifier panel to OFF and record maximum steady state indications of CHANNELS 2 and 5.

12. Set OPTICS MODE switch to ZERO.

13. Set CHANNEL 1 to 13 on the Oscillograph signal selector panel to monitor the following signals:

a. SCT Shaft MDA Tach Mon. on CHANNEL 1.

14. Set CHANNEL 1 sensitivity on Oscillograph Amplifier panel to 500 mv/mm.

15. Set SCOPE "A" INPUT to SIG 1 and CROSSBAR CONTROL to 14 on Primary Signal Selector panel to monitor SXT Shaft MDA Output Mon. on Oscilloscope.

16. After the DSKY displays all zeroes on Row 1 and Row 2, set the OPTICS MODE switch to MANUAL on the Indicator Control panel. Start the Oscillograph by setting CHART DRIVE switch on the Oscillograph Control panel to MM/SEC.

17. Measure and record the steady state peak to peak voltage indicated on the Oscilloscope while holding the Optics hand controller to the right limit not longer than 10 seconds. Release the Optics hand controller and set CHART DRIVE switch to OFF. Set all sensitivities on Oscillograph Amplifier panel to OFF and record the maximum steady state indications of CHANNEL 1.

18. Set the CHANNEL 1 switch on the Oscillograph Signal Selector panel to 12 to monitor the SXT Shaft MDA Tach Mon. voltage on CHANNEL 1.

19. Set CHANNEL 1 sensitivity to 500 mv/mm on the Oscillograph Amplifier panel.

20. Start the Oscillograph by setting the CHART DRIVE switch on the Oscillograph Control to MM/SEC.

21. Hold the Optics hand controller to the left limit not longer than 10 seconds. Release the Optics hand controller and set OPTICS MODE switch to ZERO.

22. Stop Oscillograph and record maximum steady state indication on CHANNEL 1.

MEDIUM SPEED SLEW RATE

23. Set VOLTMETER INPUT to PAVM SIG 1 and CROSSBAR CONTROL to 05. Set PAVM FUNCTION selector to 0° to monitor in phase voltage of the SCT Trunnion MDA TACH Mon.

24. Set the CONTROLLER SPEED to MED and after the DSKY displays all zeroes on Row 1 and Row 2, set the OPTICS MODE switch to MAN on the Indicator Control panel.

25. Measure and record the voltage indicated on the PAVM while holding the Optics hand controller to the upper limit not longer than 20 seconds. Release the Optics hand controller.

26. Set CHANNEL 5 switch to 11 on Oscillograph Signal Selector panel to monitor the SCT Trunnion MDA TACH Mon.

27. Set VOLTMETER INPUT to PAVM SIG 2 and CROSSBAR CONTROL to 09 to monitor the SXT Trunnion MDA TACH Mon.

28. Set CHANNEL 5 sensitivity to 10 MV/MM on Oscillograph Amplifier panel. Press CHART SPEED 20 pushbutton on the Oscillograph control panel and set CHART DRIVE switch to MM/SEC.

29. Measure and record the voltage indicated on the PAVM while holding the Optics hand controller to the lower limit not longer than 20 seconds. Release the Optics hand controller and set CHART DRIVE switch to OFF. Set all sensitivities on Oscillograph Amplifier panel to OFF and record steady state indication of CHANNEL 5 per Figure 1. Record maximum width of any pulses at 1/2 positive peak or 1/2 negative peak points on CHANNEL 5 per Figure 1. If no pulses occur, write none on the data sheet.

30. Set the OPTICS MODE switch on the Indicator Control panel to ZERO.

31. Set VOLTMETER INPUT to PAVM SIG 2 and CROSSBAR CONTROL to 04 to monitor the SCT Shaft MDA TACH Mon.

32. After the DSKY displays all zeroes on Row 1 and Row 2, set OPTICS MODE switch on Indicator Control panel to MAN.

33. Measure and record the voltage indicated on the PAVM while holding the Optics hand controller to the right limit not longer than 20 seconds. Release the Optics hand controller.

34. Set CHANNEL 1 switch to 13 on Oscillograph Signal Selector panel to monitor the SCT Shaft MDA TACH Mon.

35. Set VOLTMETER INPUT to PAVM SIG 2 and CROSSBAR CONTROL to 07 to monitor the SXT Shaft MDA Tach Mon.

36. Set CHANNEL 1 sensitivity to 20 MV/MM on Oscillograph Amplifier panel and set CHART DRIVE switch to MM/SEC.

37. Measure and record the voltage indicated on the PAVM while holding the Optics hand controller to the left limit not longer than 20 seconds. Release the Optics hand controller and set CHART DRIVE switch to OFF. Set all sensitivities on Oscillograph Amplifier panel to OFF and record steady state indication of CHANNEL 4 per Figure 1. Record maximum width of any pulses at 1/2 positive peak or 1/2 negative peak points on CHANNEL 4 per Figure 1. If no pulses occur, write none on the data sheet.

LOW SPEED SLEW RATE

28. Set OPTICS MODE switch to ZERO and CONTROLLER SPEED switch to LO on Indicator Control panel.

39. Set the CHANNEL 2 switch to 12 and the CHANNEL 5 switch to 11 on the Oscillograph Signal Selector panel to monitor:

a. SXT Trun MDA Tach Mon. on CHANNEL 2.

b. SCT Trun MDA Tach Mon. on CHANNEL 5.

40. Set VOLTMETER INPUT to PAVM SIG 2 and CROSSBAR CONTROL to 06 to monitor the CDU Trunnion Fine Error.

41. Set CHANNEL 2 sensitivity to 10 MV/MM and CHANNEL 5 sensitivity to 5 MV/MM on Oscillograph Amplifier panel and set CHART DRIVE switch to MM/SEC.

42. Set OPTICS MODE switch on the Indicator Control panel to MAN after the DSKY displays all zeroes on Row 1 and Row 2.

43. Measure and record the voltage indicated on the PAVM while holding the Optics hand controller to the upper limit until the SXT is against the Trunnion stop as indicated by a nominal (unchanging) value of +90° on Row 2 of the DSKY. Set CHART DRIVE switch to OFF and continue holding the Optics hand controller to upper limit.

44. Set the VOLTMETER INPUT switch to PAVM SIG 1 and the CROSSBAR CONTROL to 06. Measure and record the SXT TRUN MDA P/A voltage indicated on the PAVM. Release the Optics hand controller.

45. Set all sensitivities on Oscillograph Amplifier panel to OFF and record steady state indication of CHANNELS 2 and 5 per Figure 1. Record maximum width of any pulses at 1/2 positive peak or 1/2 negative peak points on CHANNELS 2 and 5 per Figure 1.

46. Set VOLTMETER INPUT to PAVM SIG 1 and CROSSBAR CONTROL to 05 to monitor the SCT Trunnion MDA Tach Mon.

47. Set CHANNEL 2 sensitivity to 10 MV/MM and CHANNEL 5 sensitivity to 5 MV/MM on Oscillograph Amplifier panel and set CHART DRIVE switch to MM/SEC.

48. Measure and record the voltage indicated on the PAVM while holding the Optics hand controller to the lower limit until the SXT is against the Trunnion stop as indicated by a nominal (unchanging) value of -5° on Row 2 of the DSKY. Release the Optics hand controller.

49. Set all sensitivities on Oscillograph Amplifier panel to OFF and record steady state indication of CHANNELS 2 and 5 per Figure 1. Record maximum width of any pulses at 1/2 positive peak or 1/2 negative peak points on CHANNELS 2 and 5 per Figure 1.

50. Set the OPTICS MODE switch on the Indicator Control panel to ZERO.

51. Set the CHANNEL 1 switch to 12 and the CHANNEL 6 switch to 11 on the Oscillograph Signal Selector panel to monitor:

a. SXT Shaft MDA Tach Mon on CHANNEL 1.

52. Set VOLTMETER INPUT to PAVM SIG 2 and CROSSBAR CONTROL to 05 to monitor the CDU Shaft Fine Error.

53. Set CHANNEL 1 sensitivity to 10 MV/MM and CHANNEL 6 sensitivity to 2 MV/MM on the Oscillograph Amplifier panel and set CHART DRIVE switch to MM/SEC.

54. After all zeroes are indicated in rows 1 and 2 of the DSKY, set the OPTICS MODE switch on the Indicator Control panel to MAN.

55. Measure and record voltage indicated on PAVM while holding Optics hand controller to right limit until SXT is against Shaft stop as indicated by a nominal (unchanging) value of +270° on Row 1 of DSKY. Set CHART DRIVE switch to OFF and continue holding the Optics hand controller to right limit.

56. Set the VOLTMETER INPUT switch to PAVM SIG 2 and the CROSSBAR CONTROL to 03. Measure and record the SXT Shaft MDA P/A voltage on the PAVM. Release the Optics hand controller.

57. Set all sensitivities on Oscillograph Amplifier to OFF and record steady state indication of CHANNEL 1 per Figure 1. Record maximum width of any pulses at 1/2 positive peak or 1/2 negative peak points of CHANNEL 1 per Figure 1.

58. Set the CHANNEL 1 switch on the Oscillograph Signal Selector panel to 13 to monitor the SCT Shaft MDA Tach Mon. on CHANNEL 1 of the Oscillograph.

59. Set the CHANNEL 1 sensitivity control on the Oscillograph Amplifier panel to 5

MV/MM and set the CHART DRIVE switch on the Oscillograph control panel to MM/SEC.

60. Hold Optics hand controller to left limit until SXT is against shaft stop as indicated by a nominal (unchanging) value of -270° on Row 1 of DSKY. Release Optics hand controller and set the CHART DRIVE switch to OFF.

61. Set the CHANNEL 1 SENSITIVITY control on the Oscillograph Amplifier panel to OFF and record the maximum steady state indication on CHANNEL 1. Record maximum width of any pulses at 1/2 positive peak or 1/2 negative peak points of CHANNEL 1 per Figure 1.

62. Set the OPTICS MODE switch on the indicator control panel to ZERO.

63. Set the CROSSBAR CONTROL to the following positions and measure the quadrature voltage indicated on the PAVM after a minimum of 20 seconds have elapsed since initiating step 62. Insure that the Telescope Trunnion switch is in the SLAVE to SXT position.

	Signal	CROSSBAR CONTROL
a.	SCT Trun MDA P/A Mon.	103
b.	SXT Shaft MDA P/A Mon.	203
c.	SXT Trun MDA P/A Mon.	106
d.	SCT Shaft MDA P/A Mon.	210

NOTE: The G & N Mounting Fixture shall be set at the 0.0° position.

1. Insure that the TELESCOPE TRUNNION switch on the Indicator Control panel is set to SLAVE TO SXT and that the TRACKER switch is in the OFF position.

2. Set the CONTROLLER COUPLING switch to DIRECT and the CONTROLLER SPEED switch to HI.

3. Perform the following DSKY operations:

a. VERB 16 NOUN 55 ENTR

b. Observe SXT Shaft Angle Displayed on Row 1

c. Observe SXT TRN LOS Angle Displayed on Row 2

4. Set the OPTICS MODE switch on the Indicator Control panel to ZERO. After one minute, record the DSKY Row 1 (Shaft Angle) and Row 2 (Trunnion LOS Angle) indications on lines (a) and (b) of the Data Sheet.

5. Place the Variable Deviation Wedge (VDW) in front of target number 1 and set VDW dial to zero. Sight through SXT LLOS and adjust the G & N Mounting Fixture until the horizontal reticle line of the SXT is coincident with the dot and horizontal reticle line of target number 1.

VERIFICATION WITH SIDL REQUIRED BEFORE USE

DATE 30 JUN 66

---

6. Set the OPTICS MODE switch on the Indicator Control panel to MAN. Pushing the Optics hand controller to the left, drive the SXT until Row 1 of the DSKY indicates 27000. Set the CONTROLLER SPEED switch to LO and manipulate the Optics hand controller to fine position and hold the SXT so that Row 1 indicates 27000 and Row 2 indicates the value recorded in step 4, line (a).

7. Cover the SXT StLOS and sight through the SXT LLOS and move the VDW laterally until target number 1 reticle is seen clearly. Adjust the VDW dial until central vertical reticle line of SXT is coincident with dot and vertical reticle line of target number 1. Record the dial reading of the VDW on line (c). Uncover StLOS.

8. Cover the SXT LLOS and repeat step 7 for the SXT StLOS while maintaining a DSKY Row 2 indication of step 4, line (a), and Row 1 indication of 27000 by manipulating the Optics hand controller. Record VDW reading on line (e). Complete lines (d), (f) and (g).

9. Set OPTICS MODE switch to ZERO. Wait 20 seconds then set the OPTICS MODE switch to MAN.

10. Complete lines (i) (j) and (k) on the Data Sheet. Set the CONTROLLER SPEED switch to HI.

11. Repeat step 6.

12. Set the VDW to value recorded on line (c). Sight through the SXT eyepiece and viewing along the LLOS, insure that the SXT vertical reticle line and target number 1 reticle dot (or vertical reticle line) are coincident.

13. Place the VDW in front of target number 3 and cover target number 1.

14. Set the VDW to the value recorded on line (k).

15. Set the CONTROLLER SPEED switch on the Indicator Control panel to HI and using the Optics hand controller, drive the SXT until Row 2 of the DSKY indicates 45000. Return the CONTROLLER SPEED switch to LO.

16. Manipulate the Optics hand controller vertically to position the SXT StLOS until the central dot on reticle of target number 3 approaches the vertical crosshair on the SXT reticle. At the instant of coincidence, press the MARK pushbutton.

NOTE: VERB 06, NOUN 56 shall appear on the CMC DSKY indicating optical CDU and time displays.

17. Record the NAV DSKY Row 2 indication on line (l) of the Data Sheet. Repeat step 16 two more times, recording the DSKY Row 2 indication for each MARK.

18. Observe the three bit counts of line (l) of the Data Sheet. If two of the three counts

---

are equal, record this count in line (m). If all three counts are different, record the count which falls between the smallest and the largest on line (m).

19. Complete lines (n) and (o) of the Data Sheet.

20. Set the VDW to the value recorded on line (n).

21. Manipulate the Optics hand controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 approaches the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

22. Record the NAV DSKY Row 2 indication on line (p) of the Data Sheet. Repeat step 21 two more times, recording the DSKY Row 2 indication for each MARK.

23. Observe the three bit counts of line (p). If two of the three counts are equal, record this count on line (q). If all three counts are different, record the count which falls between the smallest and the largest on line (q).

24. Complete lines (r), (s), (t) and (u).

25. Set the VDW to the value recorded on line (u).

26. Manipulate the Optics hand controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 is approaching the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

27. Record the NAV DSKY Row 2 indication on line (v). Repeat step 26 two more times, recording the DSKY Row 2 indication for each MARK.

28. Observe the three bit counts of line (v). If two of the three counts are equal, record this count on line (w). If all three counts are different, record the count which falls between the smallest and the largest on line (w).

29. Complete lines (x), (y), (z) and (aa).

30. Set the VDW to the value recorded on line (aa).

31. Manipulate the Optics hand controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 is approaching the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

32. Record the NAV DSKY Row 2 indication on line (ab). Repeat step 31 two more times, recording the DSKY Row 2 indication for each MARK.

33. Observe the three bit counts of line (ab). If two of the three counts are equal, record this count on line (ac). If all three counts are different, record the count which falls between the smallest and the largest on line (ac).

34. Complete lines (ad), (ae), (af) and (ag).

35. Set the VDW to the value recorded on line (ag).

36. Manipulate the Optics hand controller vertically to position the SXT StLOS until the

---

central dot on the reticle of target number 3 is approaching the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

37. Record the NAV DSKY Row 2 indication on line (ah). Repeat step 36 two more times, recording the DSKY Row 2 indication for each MARK.

38. Observe the three bit counts on line (ah). If two of the three counts are equal, record this count on line (ai). If all three counts are different, record the count which falls between the smallest and the largest on line (ai).

39. Complete lines (aj), (ak), (al) and (am).

40. Set the VDW to the value recorded on line (am).

41. Manipulate the Optics hand controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 is approaching the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

42. Record the NAV DSKY Row 2 indication on line (an). Repeat step 41 two more times, recording the DSKY Row 2 indication for each MARK.

43. Observe the three bit counts on line (an). If two of the three counts are equal, record this count on line (ao). If all three counts are different, record the count which falls between the smallest and the largest on line (ao).

44. Complete lines (ap), (aq), (ar) and (as).

45. Set the VDW to the value recorded on line (as).

46. Manipulate the Optics hand controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 is approaching the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

47. Record the NAV DSKY Row 2 indication on line (at). Repeat step 46 two more times, recording the DSKY Row 2 indication for each MARK.

48. Observe the three bit counts on line (at). If two of the three counts are equal, record this count on line (au). If all three counts are different, record the count which falls between the smallest and the largest on line (au).

49. Complete lines (av) and (aw). Enter VERB 16 NOUN 55 and press ENTR on the Nav DSKY.

50. Set the OPTICS MODE switch on the Indicator Control panel to ZERO. Wait 20 seconds then set the OPTICS MODE switch to MAN.

51. Set the CONTROLLER SPEED switch to HI, and using the Optics hand controller, drive the SXT until Row 1 of the DSKY indicates 27000. Return the CONTROLLER SPEED switch to LO and manipulate the Optics hand controller to fine position and hold the SXT so that Row 1 indicates 27000.

52. Insure that the horizontal reticle line of the SCT is coincident with the

horizontal reticle line of target number 2 by adjusting the G & N Mounting Fixture cradle.

53. Set the OPTICS MODE switch on the Indicator Control panel to ZERO. Wait 20 seconds then set TELESCOPE TRUNNION switch to 25°. The target number 2 reticle pattern shall appear to intersect the number 0 on the SCT vertical reticle line.

54. Set the TELESCOPE TRUNNION switch to 0°. The target number 2 reticle pattern shall appear to intersect the center of the SCT reticle pattern.

55. Set the TELESCOPE TRUNNION switch to SLAVE TO SXT.

56. Set the OPTICS MODE switch to ZERO. Wait 20 seconds then set the OPTICS MODE switch to MAN.

57. Set the CONTROLLER SPEED switch to HI and using the Optics hand controller, drive the SXT until Row 1 of the NAV DSKY indicates +27000. Set the CONTROLLER SPEED switch to LO and manipulate the Optics hand controller to fine position and hold the SXT so that Row 1 of the DSKY indicates 270.00°.

58. Insure the horizontal reticle line of the SCT is coincident with horizontal reticle line of target number 2 by adjusting the G & N Mounting Fixture cradle.

59. Sight through the SXT StLOS and, using the Optics hand controller, position the approximate center of the SXT StLOS reticle pattern to the number 10 resolution pattern of target number 1.

60. Sight through StLOS and LLOS and observe the number 10 and surrounding lines on target number 1 reticle. The number 10 and surrounding lines shall be clear and distinct. Record indication.

61. Position the SCT resolution card approximately 10 feet from the SCT trunnion axis.

62. Sight through the SCT LOS and, using the Optics hand controller, position the approximate center of the SCT LOS reticle pattern to the 3 min. resolution pattern of the resolution card.

63. Sight through the SCT and observe the number and surrounding lines on the resolution card. The number and surrounding lines shall be clear and distinct. Record indication.

64. Set the OPTICS MODE switch to ZERO. Wait 20 seconds then set the OPTICS MODE switch to MAN.

NOTE: The G & N Mounting Fixture shall be set at the 0.0° position.

1. Insure that the TELESCOPE TRUNNION switch on the Indicator Control panel is set to SLAVE TO SXT and that the TRACKER switch is in the OFF position.

2. Set the CONTROLLER COUPLING switch to DIRECT and the CONTROLLER SPEED switch to HI.

3. Perform the following DSKY operations:

a. VERB 16 NOUN 55 ENTR

b. Observe SXT Shaft Angle Displayed on Row 1

c. Observe SXT TRN LOS Angle Displayed on Row 2

4. Set the OPTICS MODE switch on the Indicator Control panel to ZERO. After one minute, record the DSKY Row 1 (Shaft Angle) and Row 2 (Trunnion LOS Angle) indications on lines (a) and (b) of the Data Sheet.

5. Place the Variable Deviation Wedge (VDW) in front of target number 1 and set VDW dial to zero. Sight through SXT LLOS and adjust the G & N Mounting Fixture until the horizontal reticle line of the SXT is coincident with the dot and horizontal reticle line of target number 1.

VERIFICATION WITH SIDL REQUIRED BEFORE USE

---

6. Set the OPTICS MODE switch on the Indicator Control panel to MAN. Pushing the Optics hand controller to the left, drive the SXT until Row 1 of the DSKY indicates 27000. Set the CONTROLLER SPEED switch to LO and manipulate the Optics hand controller to fine position and hold the SXT so that Row 1 indicates 27000 and Row 2 indicates the value recorded in step 4, line (a).

7. Cover the SXT StLOS and sight through the SXT LLOS and move the VDW laterally until target number 1 reticle is seen clearly. Adjust the VDW dial until central vertical reticle line of SXT is coincident with dot and vertical reticle line of target number 1. Record the dial reading of the VDW on line (c). Uncover StLOS.

8. Cover the SXT LLOS and repeat step 7 for the SXT StLOS while maintaining a DSKY Row 2 indication of step 4, line (a), and Row 1 indication of 27000 by manipulating the Optics hand controller. Record VDW reading on line (e). Complete lines (d), (f) and (g).

9. Set OPTICS MODE switch to ZERO. Wait 20 seconds then set the OPTICS MODE switch to MAN.

10. Complete lines (i) (j) and (k) on the Data Sheet. Set the CONTROLLER SPEED switch to HI.

11. Repeat step 6.

12. Set the VDW to value recorded on line (c). Sight through the SXT eyepiece and viewing along the LLOS, insure that the SXT vertical reticle line and target number 1 reticle dot (or vertical reticle line) are coincident.

13. Place the VDW in front of target number 3 and cover target number 1.

14. Set the VDW to the value recorded on line (k).

15. Set the CONTROLLER SPEED switch on the Indicator Control panel to HI and using the Optics hand controller, drive the SXT until Row 2 of the DSKY indicates 45000. Return the CONTROLLER SPEED switch to LO.

16. Manipulate the Optics hand controller vertically to position the SXT StLOS until the central dot on reticle of target number 3 approaches the vertical crosshair on the SXT reticle. At the instant of coincidence, press the MARK pushbutton.

NOTE: VERB 06, NOUN 56 shall appear on the CMC DSKY indicating optical CDU and time displays.

17. Record the NAV DSKY Row 2 indication on line (l) of the Data Sheet. Repeat step 16 two more times, recording the DSKY Row 2 indication for each MARK.

18. Observe the three bit counts of line (l) of the Data Sheet. If two of the three counts

---

are equal, record this count in line (m). If all three counts are different, record the count which falls between the smallest and the largest on line (m).

19. Complete lines (n) and (o) of the Data Sheet.

20. Set the VDW to the value recorded on line (n).

21. Manipulate the Optics hand controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 approaches the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

22. Record the NAV DSKY Row 2 indication on line (p) of the Data Sheet. Repeat step 21 two more times, recording the DSKY Row 2 indication for each MARK.

23. Observe the three bit counts of line (p). If two of the three counts are equal, record this count on line (q). If all three counts are different, record the count which falls between the smallest and the largest on line (q).

24. Complete lines (r), (s), (t) and (u).

25. Set the VDW to the value recorded on line (u).

26. Manipulate the Optics hand controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 is approaching the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

27. Record the NAV DSKY Row 2 indication on line (v). Repeat step 26 two more times, recording the DSKY Row 2 indication for each MARK.

28. Observe the three bit counts of line (v). If two of the three counts are equal, record this count on line (w). If all three counts are different, record the count which falls between the smallest and the largest on line (w).

29. Complete lines (x), (y), (z) and (aa).

30. Set the VDW to the value recorded on line (aa).

31. Manipulate the Optics hand controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 is approaching the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

32. Record the NAV DSKY Row 2 indication on line (ab). Repeat step 31 two more times, recording the DSKY Row 2 indication for each MARK.

33. Observe the three bit counts of line (ab). If two of the three counts are equal, record this count on line (ac). If all three counts are different, record the count which falls between the smallest and the largest on line (ac).

34. Complete lines (ad), (ae), (af) and (ag).

35. Set the VDW to the value recorded on line (ag).

36. Manipulate the Optics hand controller vertically to position the SXT StLOS until the

---

central dot on the reticle of target number 3 is approaching the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

37. Record the NAV DSKY Row 2 indication on line (ah). Repeat step 36 two more times, recording the DSKY Row 2 indication for each MARK.

38. Observe the three bit counts on line (ah). If two of the three counts are equal, record this count on line (ai). If all three counts are different, record the count which falls between the smallest and the largest on line (ai).

39. Complete lines (aj), (ak), (al) and (am).

40. Set the VDW to the value recorded on line (am).

41. Manipulate the Optics hand controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 is approaching the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

42. Record the NAV DSKY Row 2 indication on line (an). Repeat step 41 two more times, recording the DSKY Row 2 indication for each MARK.

43. Observe the three bit counts on line (an). If two of the three counts are equal, record this count on line (ao). If all three counts are different, record the count which falls between the smallest and the largest on line (ao).

44. Complete lines (ap), (aq), (ar) and (as).

45. Set the VDW to the value recorded on line (as).

46. Manipulate the Optics hand controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 is approaching the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

47. Record the NAV DSKY Row 2 indication on line (at). Repeat step 46 two more times, recording the DSKY Row 2 indication for each MARK.

48. Observe the three bit counts on line (at). If two of the three counts are equal, record this count on line (au). If all three counts are different, record the count which falls between the smallest and the largest on line (au).

49. Complete lines (av) and (aw). Enter VERB 16 NOUN 55 and press ENTR on the Nav DSKY.

50. Set the OPTICS MODE switch on the Indicator Control panel to ZERO. Wait 20 seconds then set the OPTICS MODE switch to MAN.

51. Set the CONTROLLER SPEED switch to HI, and using the Optics hand controller, drive the SXT until Row 1 of the DSKY indicates 27000. Return the CONTROLLER SPEED switch to LO and manipulate the Optics hand controller to fine position and hold the SXT so that Row 1 indicates 27000.

52. Insure that the horizontal reticle line of the SCT is coincident with the

JOB OPTICS POSITIONAL ACCURACY TEST | JDC 12214 REV B PAGE 5 OF 5

SUBSYSTEM G & N SYSTEM | ASSY

horizontal reticle line of target number 2 by adjusting the G & N Mounting Fixture cradle.

53. Set the OPTICS MODE switch on the Indicator Control panel to ZERO. Wait 20 seconds, then set the OPTICS MODE switch to MAN and the TELESCOPE TRUNNION switch to 25°. The target number 2 reticle pattern shall appear to intersect the number 0 on the SCT vertical reticle line.

54. Set the TELESCOPE TRUNNION switch to 0°. The target number 2 reticle pattern shall appear to intersect the center of the SCT reticle pattern.

55. Set the TELESCOPE TRUNNION switch to SLAVE TO SXT.

56. Set the OPTICS MODE switch to ZERO. Wait 20 seconds then set the OPTICS MODE switch to MAN.

57. Set the CONTROLLER SPEED switch to HI and using the Optics hand controller, drive the SXT until Row 1 of the NAV DSKY indicates +27000. Set the CONTROLLER SPEED switch to LO and manipulate the Optics hand controller to fine position and hold the SXT so that Row 1 of the DSKY indicates 270.00°.

58. Insure the horizontal reticle line of the SCT is coincident with horizontal reticle line of target number 2 by adjusting the G & N Mounting Fixture cradle.

59. Sight through the SXT StLOS and, using the Optics hand controller, position the approximate center of the SXT StLOS reticle pattern to the number 10 resolution pattern of target number 1.

60. Sight through StLOS and LLOS and observe the number 10 and surrounding lines on target number 1 reticle. The number 10 and surrounding lines shall be clear and distinct. Record indication.

61. Position the SCT resolution card approximately 10 feet from the SCT trunnion axis.

62. Sight through the SCT LOS and, using the Optics hand controller, position the approximate center of the SCT LOS reticle pattern to the 3 min. resolution pattern of the resolution card.

63. Sight through the SCT and observe the number and surrounding lines on the resolution card. The number and surrounding lines shall be clear and distinct. Record indication.

64. Set the OPTICS MODE switch to ZERO. Wait 20 seconds then set the OPTICS MODE switch to MAN.

IMPORTANT

INTERVAL

TOOLS AND MATERIAL Variable Deviation Wedge
SCT Resolution Card

NOTE: The G & N Mounting Fixture shall be set at the 0.0° position.

1. Insure that the TELESCOPE TRUNNION switch on the Indicator Control panel is set to SLAVE TO SXT and that the TRACKER switch is in the OFF position.

2. Set the CONTROLLER COUPLING switch to DIRECT and the CONTROLLER SPEED switch to HI.

3. Perform the following DSKY operations:

a. VERB 16 NOUN 55 ENTR

b. Observe SXT Shaft Angle Displayed on Row 1

c. Observe SXT TRN LOS Angle Displayed on Row 2

4. Set the OPTICS MODE switch on the Indicator Control panel to ZERO. After one minute, record the DSKY Row 1 (Shaft Angle) and Row 2 (Trunnion LOS Angle) indications on lines (a) and (b) of the Data Sheet.

5. Place the Variable Deviation Wedge (VDW) in front of target number 1 using the VDW base which allows deviation to be measured in the vertical plane (setting knob points upward). Set VDW dial to zero.

VERIFICATION WITH SIDL REQUIRED BEFORE USE

---

6. Cover the SXT StLOS. Sight through the SXT LLOS and adjust the G & N Mounting Fixture until the horizontal reticle line of the SXT is coincident with the dot and horizontal reticle line of target number 1.

7. Sight through the SXT LLOS and move the VDW laterally until target number 1 reticle is seen clearly. Adjust the VDW dial until the central horizontal reticle line of SXT is coincident with dot and horizontal reticle line of target number 1. Record the VDW reading on line (c). Uncover the SXT StLOS.

NOTE: If the value obtained for line (g) in step 8 is not within tolerance, perform the alternate procedure given in steps 65 through 74 to verify that an out-of-tolerance condition exists.

8. Cover the SXT LLOS. Sight through the SXT StLOS and adjust the VDW dial until the central horizontal reticle line of SXT is coincident with the dot and horizontal reticle line of target number 1. Record the VDW reading on line (e). Complete lines (d), (f), and (g). Uncover SXT LLOS.

9. Rotate the VDW to the other base (setting knob points right). Set the VDW dial to zero.

10. Set the OPTICS MODE switch on the Indicator Control Panel to MAN. Pushing the Optics hand controller to the left, drive the SXT until Row 1 of the DSKY indicates 27000. Set the CONTROLLER SPEED switch to LO and manipulate the Optics hand controller to fine position and hold the SXT so that Row 1 indicates 27000.

11. Cover the SXT StLOS. Sight through the SXT LLOS and move the VDW laterally until the target number 1 reticle is seen clearly. Adjust the VDW dial until the central verticle reticle line of SXT is coincident with dot and verticle reticle line of target number 1. Record the VDW dial reading on line (g.1). Uncover the SXT StLOS.

12. Complete lines (i), (j), and (k) on the Data Sheet.

13. Place the VDW in front of target number 3 and cover target number 1.

14. Set the VDW to the value recorded on line (k).

15. Set the CONTROLLER SPEED switch on the Indicator Control panel to HI and using the Optics hand controller, drive the SXT until Row 2 of the DSKY indicates 45000. Return the CONTROLLER SPEED switch to LO.

---

16. Manipulate the Optics hand controller vertically to position the SXT StLOS until the central dot on reticle of target number 3 approaches the vertical crosshair on the SXT reticle. At the instant of coincidence, press the MARK pushbutton.

NOTE: VERB 06, NOUN 56 shall appear on the CMC DSKY indicating optical CDU and time displays.

17. Record the NAV DSKY Row 2 indication on line (l) of the Data Sheet. Repeat step 16 two more times, recording the DSKY Row 2 indication for each MARK.

18. Observe the three bit counts of line (l) of the Data Sheet. If two of the three counts are equal, record this count in line (m). If all three counts are different, record the count which falls between the smallest and the largest on line (m).

19. Complete lines (n) and (o) of the Data Sheet.

20. Set the VDW to the value recorded on line (n).

21. Manipulate the Optics hand controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 approaches the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

22. Record the NAV DSKY Row 2 indication on line (p) of the Data Sheet. Repeat step 21 two more times, recording the DSKY Row 2 indication for each MARK.

23. Observe the three bit counts of line (p). If two of the three counts are equal, record this count on line (q). If all three counts are different, record the count which falls between the smallest and the largest on line (q).

24. Complete lines (r), (s), (t) and (u).

25. Set the VDW to the value recorded on line (u).

26. Manipulate the Optics hand controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 is approaching the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

27. Record the NAV DSKY Row 2 indication on line (v). Repeat step 26 two more times, recording the DSKY Row 2 indication for each MARK.

28. Observe the three bit counts of line (v). If two of the three counts are equal, record this count on line (w). If all three counts are different, record the count which falls between the smallest and the largest on line (w).

29. Complete lines (x), (y), (z) and (aa).

30. Set the VDW to the value recorded on line (aa).

31. Manipulate the Optics hand controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 is approaching the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

32. Record the NAV DSKY Row 2 indication on line (ab). Repeat step 31 two more times,

---

recording the DSKY Row 2 indication for each MARK.

33. Observe the three bit counts of line (ab). If two of the three counts are equal, record this count on line (ac). If all three counts are different, record the count which falls between the smallest and the largest on line (ac).

34. Complete lines (ad), (ae), (af) and (ag).

35. Set the VDW to the value recorded on line (ag).

36. Manipulate the Optics hand controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 is approaching the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

37. Record the NAV DSKY Row 2 indication on line (ah). Repeat step 36 two more times, recording the DSKY Row 2 indication for each MARK.

38. Observe the three bit counts on line (ah). If two of the three counts are equal, record this count on line (ai). If all three counts are different, record the count which falls between the smallest and the largest on line (ai).

39. Complete lines (aj), (ak), (al) and (am).

40. Set the VDW to the value recorded on line (am).

41. Manipulate the Optics hand controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 is approaching the vertical crosshair on the SXT reticle. Press the MARK push-button at the instant of coincidence.

42. Record the NAV DSKY Row 2 indication on line (an). Repeat step 41 two more times, recording the DSKY Row 2 indication for each MARK.

43. Observe the three bit counts on line (an). If two of the three counts are equal, record this count on line (ao). If all three counts are different, record the count which falls between the smallest and the largest on line (ao).

44. Complete lines (ap), (aq), (ar) and (as).

45. Set the VDW to the value recorded on line (as).

46. Manipulate the Optics hand controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 is approaching the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

47. Record the NAV DSKY Row 2 indication on line (at). Repeat step 46 two more times, recording the DSKY Row 2 indication for each MARK.

48. Observe the three bit counts on line (at). If two of the three counts are equal, record this count on line (au). If all three counts are different, record the count which falls between the smallest and the largest on line (au).

49. Complete lines (av) and (aw). Enter VERB 16 NOUN 55 and press ENTR on the Nav DSKY.

SUBSYSTEM G & N SYSTEM | ASSY

50. Set the OPTICS MODE switch on the Indicator Control panel to ZERO. Wait 20 seconds then set the OPTICS MODE switch to MAN.

51. Set the CONTROLLER SPEED switch to HI, and using the Optics hand controller, drive the SXT until Row 1 of the DSKY indicates 27000. Return the CONTROLLER SPEED switch to LO and manipulate the Optics hand controller to fine position and hold the SXT so that Row 1 indicates 27000.

52. Insure that the horizontal reticle line of the SCT is coincident with the horizontal reticle line of target number 2 by adjusting the G & N Mounting Fixture cradle.

53. Set the OPTICS MODE switch on the Indicator Control panel to ZERO. Wait 20 seconds, then set the OPTICS MODE switch to MAN and the TELESCOPE TRUNNION switch to 25°. The target number 2 reticle pattern shall appear to intersect the number 0 on the SCT vertical reticle line.

54. Set the TELESCOPE TRUNNION switch to 0°. The target number 2 reticle pattern shall appear to intersect the center of the SCT reticle pattern.

55. Set the TELESCOPE TRUNNION switch to SLAVE TO SXT.

56. Set the OPTICS MODE switch to ZERO. Wait 20 seconds then set the OPTICS MODE switch to MAN.

57. Set the CONTROLLER SPEED switch to HI and using the Optics hand controller, drive the SXT until Row 1 of the NAV DSKY indicates +27000. Set the CONTROLLER SPEED switch to LO and manipulate the Optics hand controller to fine position and hold the SXT so that Row 1 of the DSKY indicates 270.00°.

58. Insure the horizontal reticle line of the SCT is coincident with horizontal reticle line of target number 2 by adjusting the G & N Mounting Fixture cradle.

59. Sight through the SXT StLOS and, using the Optics hand controller, position the approximate center of the SXT StLOS reticle pattern to the number 10 resolution pattern of target number 1.

60. Sight through StLOS and LLOS and observe the number 10 and surrounding lines of target number 1 reticle. The number 10 and surrounding lines shall be clear and distinct. Record indication.

61. Position the SCT resolution card approximately 10 feet from the SCT trunnion axis.

62. Sight through the SCT LOS and, using the Optics hand controller, position the approximate center of the SCT LOS reticle pattern to the 3 min. resolution pattern of the resolution card.

63. Sight through the SCT and observe the number and surrounding lines on the resolution card. The number and surrounding lines shall be clear and distinct. Record indication.

64. Set the OPTICS MODE switch to ZERO. Wait 20 seconds then set the OPTICS MODE switch to MAN.

DATE 30 JUN 66

SUBSYSTEM G & N SYSTEM | ASSY

ALTERNATE SXT LOS PARALLELISM PROCEDURE

65. Place the theodolite in a line coincident with the SXT LLOS and cover the SXT StLOS.

66. Level theodolite base to the plate spirit level and level the altitude spirit level. Adjust the telescope focus to infinity. Set telescope to approximately 90°. Install the portable light assembly and adapter in the SXT eyepiece assembly. While observing the theodolite image, adjust the G & N Mounting Fixture until the SXT reticle is superimposed on the theodolite horizontal filar.

67. Align the theodolite horizontal filar to the SXT reticle and record the vertical angle.

68. Reverse and plunge the theodolite telescope and repeat step 67.

69. Repeat steps 67 and 68 for seven additional pairs of readings. After each time that step 68 is completed, drive the theodolite elevation off prior to realigning to the SXT reticle.

70. Place the theodolite in a line coincident with the SXT StLOS and cover the SXT LLOS.

71. Repeat step 66.

72. Repeat steps 67, 68, and 69.

73. Complete calculations for SXT StLOS to LLOS parallelism error.

74. Continue normal test sequence at step 9.

IMPORTANT

INTERVAL

TOOLS AND MATERIAL Variable Deviation Wedge
SCT Resolution Card

NOTE: The G & N Mounting Fixture shall be set at the 0.0° position.

1. Press OPTICS POWER ON pushbutton on Test Control Panel. OPTICS POWER ON pushbutton shall light. Insure that the TELESCOPE TRUNNION switch on the Indicator Control panel is set to SLAVE TO SXT and that the TRACKER switch is in the OFF position.

2. Set the CONTROLLER COUPLING switch to DIRECT and the CONTROLLER SPEED switch to HI.

3. Perform the following DSKY operations:

a. VERB 16 NOUN 55 ENTR

b. Observe SXT Shaft Angle Displayed on Row 1

c. Observe SXT TRN LOS Angle Displayed on Row 2

4. Set the OPTICS MODE switch on the Indicator Control panel to ZERO. After one minute, record the DSKY Row 1 (Shaft Angle) and Row 2 (Trunnion LOS Angle) indications on lines (a) and (b) of the Data Sheet.

5. Place the Variable Deviation Wedge (VDW) in front of target number 1 using the VDW base which allows deviation to be measured in the vertical plane (setting knob points upward). Set VDW dial to zero.

VERIFICATION WITH SIDL REQUIRED BEFORE USE

---

6. Cover the SXT StLOS. Sight through the SXT LLOS and adjust the G & N Mounting Fixture until the horizontal reticle line of the SXT is coincident with the dot and horizontal reticle line of target number 1.

7. Sight through the SXT LLOS and move the VDW laterally until target number 1 reticle is seen clearly. Adjust the VDW dial until the central horizontal reticle line of SXT is coincident with dot and horizontal reticle line of target number 1. Record the VDW reading on line (c). Uncover the SXT StLOS.

NOTE: If the value obtained for line (g) in step 8 is not within tolerance, perform the alternate procedure given in steps 65 through 74 to verify that an out-of-tolerance condition exists.

8. Cover the SXT LLOS. Sight through the SXT StLOS and adjust the VDW dial until the central horizontal reticle line of SXT is coincident with the dot and horizontal reticle line of target number 1. Record the VDW reading on line (e). Complete lines (d), (f), and (g). Uncover SXT LLOS.

9. Rotate the VDW to the other base (setting knob points right). Set the VDW dial to zero.

10. Set the OPTICS MODE switch on the Indicator Control Panel to MAN. Pushing the Optics hand controller to the left, drive the SXT until Row 1 of the DSKY indicates 27000. Set the CONTROLLER SPEED switch to LO and manipulate the Optics hand controller to fine position and hold the SXT so that Row 1 indicates 27000.

11. Cover the SXT StLOS. Sight through the SXT LLOS and move the VDW laterally until the target number 1 reticle is seen clearly. Adjust the VDW dial until the central verticle reticle line of SXT is coincident with dot and verticle reticle line of target number 1. Record the VDW dial reading on line (g.1). Uncover the SXT StLOS.

12. Complete lines (i), (j), and (k) on the Data Sheet.

13. Place the VDW in front of target number 3 and cover target number 1.

14. Set the VDW to the value recorded on line (k).

15. Set the CONTROLLER SPEED switch on the Indicator Control panel to HI and using the Optics hand controller, drive the SXT until Row 2 of the DSKY indicates 45000. Return the CONTROLLER SPEED switch to LO.

---

16. Manipulate the Optics hand controller vertically to position the SXT StLOS until the central dot on reticle of target number 3 approaches the vertical crosshair on the SXT reticle. At the instant of coincidence, press the MARK pushbutton.

NOTE: VERB 06, NOUN 56 shall appear on the CMC DSKY indicating optical CDU and time displays.

17. Record the DSKY Row 2 indication on line (l) of the Data Sheet. Repeat step 16 two more times, recording the DSKY Row 2 indication for each MARK.

18. Observe the three bit counts of line (l) of the Data Sheet. If two of the three counts are equal, record this count in line (m). If all three counts are different, record the count which falls between the smallest and the largest on line (m).

19. Complete lines (n) and (o) of the Data Sheet.

20. Set the VDW to the value recorded on line (n).

21. Manipulate the Optics hand controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 approaches the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

22. Record the DSKY Row 2 indication on line (p) of the Data Sheet. Repeat step 21 two more times, recording the DSKY Row 2 indication for each MARK.

23. Observe the three bit counts of line (p). If two of the three counts are equal, record this count on line (q). If all three counts are different, record the count which falls between the smallest and the largest on line (q).

24. Complete lines (r), (s), (t) and (u).

25. Set the VDW to the value recorded on line (u).

26. Manipulate the Optics hand controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 is approaching the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

27. Record the DSKY Row 2 indication on line (v). Repeat step 26 two more times, recording the DSKY Row 2 indication for each MARK.

28. Observe the three bit counts of line (v). If two of the three counts are equal, record this count on line (w). If all three counts are different, record the count which falls between the smallest and the largest on line (w).

29. Complete lines (x), (y), (z) and (aa).

30. Set the VDW to the value recorded on line (aa).

31. Manipulate the Optics hand controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 is approaching the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

32. Record the DSKY Row 2 indication on line (ab). Repeat step 31 two more times, recording the DSKY Row 2 indication for each MARK.

---

33. Observe the three bit counts of line (ab). If two of the three counts are equal, record this count on line (ac). If all three counts are different, record the count which falls between the smallest and the largest on line (ac).

34. Complete lines (ad), (ae), (af) and (ag).

35. Set the VDW to the value recorded on line (ag).

36. Manipulate the Optics hand controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 is approaching the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

37. Record the DSKY Row 2 indication on line (ah). Repeat step 36 two more times, recording the DSKY Row 2 indication for each MARK.

38. Observe the three bit counts on line (ah). If two of the three counts are equal, record this count on line (ai). If all three counts are different, record the count which falls between the smallest and the largest on line (ai).

39. Complete lines (aj), (ak), (al) and (am).

40. Set the VDW to the value recorded on line (am).

41. Manipulate the Optics hand controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 is approaching the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

42. Record the DSKY Row 2 indication on line (an). Repeat step 41 two more times, recording the DSKY Row 2 indication for each MARK.

43. Observe the three bit counts on line (an). If two of the three counts are equal, record this count on line (ao). If all three counts are different, record the count which falls between the smallest and the largest on line (ao).

44. Complete lines (ap), (aq), (ar) and (as).

45. Set the VDW to the value recorded on line (as).

46. Manipulate the Optics hand controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 is approaching the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

47. Record the DSKY Row 2 indication on line (at). Repeat step 46 two more times, recording the DSKY Row 2 indication for each MARK.

48. Observe the three bit counts on line (at). If two of the three counts are equal, record this count on line (au). If all three counts are different, record the count which falls between the smallest and the largest on line (au).

49. Complete lines (av) and (aw). Enter VERB 16 NOUN 55 and press ENTR pushbutton on the DSKY.

JOB OPTICS POSITIONAL ACCURACY TEST | JDC 12214 REV D PAGE 5 OF 6

SUBSYSTEM G & N SYSTEM | ASSY

50. Set the OPTICS MODE switch on the Indicator Control panel to ZERO. Wait 20 seconds then set the OPTICS MODE switch to MAN.

51. Set the CONTROLLER SPEED switch to HI, and using the Optics hand controller, drive the SXT until Row 1 of the DSKY indicates 27000. Return the CONTROLLER SPEED switch to LO and manipulate the Optics hand controller to fine position and hold the SXT so that Row 1 indicates 27000.

52. Insure that the horizontal reticle line of the SCT is coincident with the horizontal reticle line of target number 2 by adjusting the G & N Mounting Fixture cradle.

53. Set the OPTICS MODE switch on the Indicator Control panel to ZERO. Wait 20 seconds, then set the OPTICS MODE switch to MAN and the TELESCOPE TRUNNION switch to 25°. The target number 2 reticle pattern shall appear to intersect the number 0 on the SCT vertical reticle line.

54. Set the TELESCOPE TRUNNION switch to 0°. The target number 2 reticle pattern shall appear to intersect the center of the SCT reticle pattern.

55. Set the TELESCOPE TRUNNION switch to SLAVE TO SXT.

56. Set the OPTICS MODE switch to ZERO. Wait 20 seconds then set the OPTICS MODE switch to MAN.

57. Set the CONTROLLER SPEED switch to HI and using the Optics hand controller, drive the SXT until Row 1 of the DSKY indicates +27000. Set the CONTROLLER SPEED switch to LO and manipulate the Optics hand controller to fine position and hold the SXT so that Row 1 of the DSKY indicates 270.00°.

58. Insure the horizontal reticle line of the SCT is coincident with horizontal reticle line of target number 2 by adjusting the G & N Mounting Fixture cradle.

59. Sight through the SXT StLOS and, using the Optics hand controller, position the approximate center of the SXT StLOS reticle pattern to the number 10 resolution pattern of target number 1.

60. Sight through StLOS and LLOS and observe the number 10 and surrounding lines of target number 1 reticle. The number 10 and surrounding lines shall be clear and distinct. Record indication.

61. Position the SCT resolution card approximately 10 feet from the SCT trunnion axis.

62. Sight through the SCT LOS and, using the Optics hand controller, position the approximate center of the SCT LOS reticle pattern to the 3 min. resolution pattern of the resolution card.

63. Sight through the SCT and observe the number and surrounding lines on the resolution card. The number and surrounding lines shall be clear and distinct. Record indication.

64. Set the OPTICS MODE switch to ZERO. Wait 20 seconds then set the OPTICS MODE switch to MAN. Press OPTICS POWER ON pushbutton on Test Control panel. OPTICS POWER ON pushbutton shall go out.

DATE 30 JUN 66

TOOLS AND MATERIAL Variable Deviation Wedge
SCT Resolution Card

NOTE: The G & N Mounting Fixture shall be set at the 0.0° position.

1. Press OPTICS POWER ON pushbutton on Test Control Panel. OPTICS POWER ON pushbutton shall light. Insure that the TELESCOPE TRUNNION switch on the Indicator Control panel is set to SLAVE TO SXT and that the TRACKER switch is in the OFF position.

2. Set the CONTROLLER COUPLING switch to DIRECT and the CONTROLLER SPEED switch to HI.

3. Perform the following DSKY operations:

a. VERB 16 NOUN 55 ENTR

b. Observe SXT Shaft Angle Displayed on Row 1

c. Observe SXT TRN LOS Angle Displayed on Row 2

4. Set the OPTICS MODE switch on the Indicator Control panel to ZERO. After one minute, record the DSKY Row 1 (Shaft Angle) and Row 2 (Trunnion LOS Angle) indications on lines (a) and (b) of the Data Sheet.

5. Place the Variable Deviation Wedge (VDW) in front of target number 1 using the VDW base which allows deviation to be measured in the vertical plane (setting knob points upward). Set VDW dial to zero.

VERIFICATION WITH SIDL REQUIRED BEFORE USE

DATE 30 JUN 66

JOB OPTICS POSITIONAL ACCURACY TEST | JDC 12214 REV E PAGE 2 OF 6

SUBSYSTEM G & N SYSTEM | ASSY

6. Cover the SXT StLOS. Sight through the SXT LLOS and adjust the G & N Mounting Fixture until the horizontal reticle line of the SXT is coincident with the dot and horizontal reticle line of target number 1.

7. Sight through the SXT LLOS and move the VDW laterally until target number 1 reticle is seen clearly. Adjust the VDW dial until the central horizontal reticle line of SXT is coincident with dot and horizontal reticle line of target number 1. Record the VDW reading on line (c). Uncover the SXT StLOS.

NOTE: If the value obtained for line (g) in step 8 is not within tolerance, perform the alternate procedure given in steps 65 through 74 to verify that an out-of-tolerance condition exists.

8. Cover the SXT LLOS. Sight through the SXT StLOS and adjust the VDW dial until the central horizontal reticle line of SXT is coincident with the dot and horizontal reticle line of target number 1. Record the VDW reading on line (e). Complete lines (d), (f), and (g). Uncover SXT LLOS.

9. Rotate the VDW to the other base (setting knob points right). Set the VDW dial to zero.

10. Set the OPTICS MODE switch on the Indicator Control Panel to MAN. Pushing the Optics hand controller to the left, drive the SXT until Row 1 of the DSKY indicates approximately +27000. Set the CONTROLLER SPEED switch to LO and manipulate the Optics hand controller to fine position and hold the SXT so that Row 1 indicates +27000.

11. Cover the SXT StLOS. Sight through the SXT LLOS and move the VDW laterally until the target number 1 reticle is seen clearly. Adjust the VDW dial until the central vertical reticle line of SXT is coincident with dot and vertical reticle line of target number 1. Record the VDW dial reading on line (g.1). Uncover the SXT StLOS.

12. Complete lines (i), (j), and (k) on the Data Sheet.

13. Place the VDW in front of target number 3 and cover target number 1.

14. Set the VDW to the value recorded on line (k).

15. Set the CONTROLLER SPEED switch on the Indicator Control panel to HI and using the Optics hand controller, drive the SXT until Row 2 of the DSKY indicates approximately +45000. Return the CONTROLLER SPEED switch to LO.

DATE 30 JUN 66

JOB OPTICS POSITIONAL ACCURACY TEST | JDC 12214 REV E PAGE 3 OF 6

SUBSYSTEM G & N SYSTEM | ASSY

16. Manipulate the Optics hand controller vertically to position the SXT StLOS until the central dot on reticle of target number 3 approaches the vertical crosshair on the SXT reticle. At the instant of coincidence, press the MARK pushbutton.

NOTE: VERB 06, NOUN 56 shall appear on the CMC DSKY indicating optical CDU and time displays.

17. Record the DSKY Row 2 indication on line (1) of the Data Sheet. Repeat step 16 two more times, recording the DSKY Row 2 indication for each MARK.

18. Observe the three bit counts of line (1) of the Data Sheet. If two of the three counts are equal, record this count in line (m). If all three counts are different, record the count which falls between the smallest and the largest on line (m).

19. Complete lines (n) and (o) of the Data Sheet.

20. Set the VDW to the value recorded on line (o).

21. Manipulate the Optics hand controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 approaches the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

22. Record the DSKY Row 2 indication on line (p) of the Data Sheet. Repeat step 21 two more times, recording the DSKY Row 2 indication for each MARK.

23. Observe the three bit counts of line (p). If two of the three counts are equal, record this count on line (q). If all three counts are different, record the count which falls between the smallest and the largest on line (q).

24. Complete lines (r), (s), (t) and (u).

25. Set the VDW to the value recorded on line (u).

26. Manipulate the Optics hand controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 is approaching the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

27. Record the DSKY Row 2 indication on line (v). Repeat step 26 two more times, recording the DSKY Row 2 indication for each MARK.

28. Observe the three bit counts of line (v). If two of the three counts are equal, record this count on line (w). If all three counts are different, record the count which falls between the smallest and the largest on line (w).

29. Complete lines (x), (y), (z) and (aa).

30. Set the VDW to the value recorded on line (aa).

31. Manipulate the Optics hand controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 is approaching the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

32. Record the DSKY Row 2 indication on line (ab). Repeat step 31 two more times,

DATE 30 JUN 66

JOB OPTICS POSITIONAL ACCURACY TEST | JDC 12214 REV E PAGE 4 OF 6

SUBSYSTEM G & N SYSTEM | ASSY

recording the DSKY Row 2 indication for each MARK.

33. Observe the three bit counts of line (ab). If two of the three counts are equal, record this count on line (ac). If all three counts are different, record the count which falls between the smallest and the largest on line (ac).

34. Complete lines (ad), (ae), (af) and (ag).

35. Set the VDW to the value recorded on line (ag).

36. Manipulate the Optics hand controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 is approaching the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

37. Record the DSKY Row 2 indication on line (ah). Repeat step 36 two more times, recording the DSKY Row 2 indication for each MARK.

38. Observe the three bit counts on line (ah). If two of the three counts are equal, record this count on line (ai). If all three counts are different, record the count which falls between the smallest and the largest on line (ai).

39. Complete lines (aj), (ak), (al) and (am).

40. Set the VDW to the value recorded on line (am).

41. Manipulate the Optics hand controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 is approaching the vertical crosshair on the SXT reticle. Press the MARK push-button at the instant of coincidence.

42. Record the DSKY Row 2 indication on line (an). Repeat step 41 two more times, recording the DSKY Row 2 indication for each MARK.

43. Observe the three bit counts on line (an). If two of the three counts are equal, record this count on line (ao). If all three counts are different, record the count which falls between the smallest and the largest on line (ao).

44. Complete lines (ap), (aq), (ar) and (as).

45. Set the VDW to the value recorded on line (as).

46. Manipulate the Optics hand controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 is approaching the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

47. Record the DSKY Row 2 indication on line (at). Repeat step 46 two more times, recording the DSKY Row 2 indication for each MARK.

48. Observe the three bit counts on line (at). If two of the three counts are equal, record this count on line (au). If all three counts are different, record the count which falls between the smallest and the largest on line (au).

49. Complete lines (av) and (aw). Enter VERB 16 NOUN 55 and press ENTR push-button on the DSKY.

18. Observe the three bit counts of line (l) of the Data Sheet. If two of the three counts are equal, record this count in line (m). If all three counts are different, record the count which falls between the smallest and the largest on line (m).

19. Complete lines (n) and (o) of the Data Sheet.

20. Set the VDW to the value recorded on line (o).

21. Manipulate the Optics hand controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 approaches the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

22. Record the DSKY Row 2 indication on line (p) of the Data Sheet. Repeat step 21 two more times, recording the DSKY Row 2 indication for each MARK.

23. Observe the three bit counts of line (p). If two of the three counts are equal, record this count on line (q). If all three counts are different, record the count which falls between the smallest and the largest on line (q).

24. Complete lines (r), (s), (t) and (u).

25. Set the VDW to the value recorded on line (u).

26. Manipulate the Optics hand controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 is approaching the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

27. Record the DSKY Row 2 indication on line (v). Repeat step 26 two more times, recording the DSKY Row 2 indication for each MARK.

28. Observe the three bit counts of line (v). If two of the three counts are equal, record this count on line (w). If all three counts are different, record the count which falls between the smallest and the largest on line (w).

29. Complete lines (x), (y), (z) and (aa).

30. Set the VDW to the value recorded on line (aa).

31. Manipulate the Optics hand controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 is approaching the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

32. Record the DSKY Row 2 indication on line (ab). Repeat step 31 two more times,

DATE 30 JUN 66

JOB OPTICS POSITIONAL ACCURACY TEST | JDC 12214 REV E PAGE 4 OF 6

SUBSYSTEM G & N SYSTEM | ASSY

recording the DSKY Row 2 indication for each MARK.

33. Observe the three bit counts of line (ab). If two of the three counts are equal, record this count on line (ac). If all three counts are different, record the count which falls between the smallest and the largest on line (ac).

34. Complete lines (ad), (ae), (af) and (ag).

35. Set the VDW to the value recorded on line (ag).

36. Manipulate the Optics hand controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 is approaching the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

37. Record the DSKY Row 2 indication on line (ah). Repeat step 36 two more times, recording the DSKY Row 2 indication for each MARK.

38. Observe the three bit counts on line (ah). If two of the three counts are equal, record this count on line (ai). If all three counts are different, record the count which falls between the smallest and the largest on line (ai).

39. Complete lines (aj), (ak), (al) and (am).

40. Set the VDW to the value recorded on line (am).

41. Manipulate the Optics hand controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 is approaching the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

42. Record the DSKY Row 2 indication on line (an). Repeat step 41 two more times, recording the DSKY Row 2 indication for each MARK.

43. Observe the three bit counts on line (an). If two of the three counts are equal, record this count on line (ao). If all three counts are different, record the count which falls between the smallest and the largest on line (ao).

44. Complete lines (ap), (aq), (ar) and (as).

45. Set the VDW to the value recorded on line (as).

46. Manipulate the Optics hand controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 is approaching the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

47. Record the DSKY Row 2 indication on line (at). Repeat step 46 two more times, recording the DSKY Row 2 indication for each MARK.

48. Observe the three bit counts on line (at). If two of the three counts are equal, record this count on line (au). If all three counts are different, record the count which falls between the smallest and the largest on line (au).

49. Complete lines (av) and (aw). Enter VERB 16 NOUN 55 and press ENTR pushbutton on the DSKY.

DATE 30 JUN 66

50. Set the OPTICS MODE switch on the Indicator Control panel to ZERO. Wait 20 seconds then set the OPTICS MODE switch to MAN.

51. Set the CONTROLLER SPEED switch to HI, and using the Optics hand controller, drive the SXT until Row 1 of the DSKY indicates approximately +27000. Return the CONTROLLER SPEED switch to LO and manipulate the Optics hand controller to fine position and hold the SXT so that Row 1 indicates +27000.

52. Insure that the horizontal reticle line of the SCT is coincident with the horizontal reticle line of target number 2 by adjusting the G & N Mounting Fixture cradle.

53. Set the OPTICS MODE switch on the Indicator Control panel to ZERO. Wait 20 seconds, then set the OPTICS MODE switch to MAN and the TELESCOPE TRUNNION switch to 25°. The target number 2 reticle pattern shall appear to intersect the number 0 on the SCT vertical reticle line.

54. Set the TELESCOPE TRUNNION switch to 0°. The target number 2 reticle pattern shall appear to intersect the center of the SCT reticle pattern.

55. Set the TELESCOPE TRUNNION switch to SLAVE TO SXT.

56. Set the OPTICS MODE switch to ZERO. Wait 20 seconds then set the OPTICS MODE switch to MAN.

57. Set the CONTROLLER SPEED switch to HI and using the Optics hand controller, drive the SXT until Row 1 of the DSKY indicates approximately +27000. Set the CONTROLLER SPEED switch to LO and manipulate the Optics hand controller to fine position and hold the SXT so that Row 1 of the DSKY indicates +27000.

58. Insure the horizontal reticle line of the SCT is coincident with horizontal reticle line of target number 2 by adjusting the G & N Mounting Fixture cradle.

59. Sight through the SXT StLOS and, using the Optics hand controller, position the approximate center of the SXT StLOS reticle pattern to the number 10 resolution pattern of target number 1.

60. Sight through StLOS and LLOS and observe the number 10 and surrounding lines of target number 1 reticle. The number 10 and surrounding lines shall be clear and distinct. Record indication.

61. Position the SCT resolution card approximately 10 feet from the SCT trunnion axis.

62. Sight through the SCT LOS and, using the Optics hand controller, position the approximate center of the SCT LOS reticle pattern to the 3 min. resolution pattern of the resolution card.

63. Sight through the SCT and observe the number and surrounding lines on the resolution card. The number and surrounding lines shall be clear and distinct. Record indication.

64. Set the OPTICS MODE switch to ZERO. Wait 20 seconds then set the OPTICS MODE switch to MAN. Press OPTICS POWER ON pushbutton on Test Control panel. OPTICS POWER ON pushbutton shall go out.

DATE 30 JUN 66

ALTERNATE SXT LOS PARALLELISM PROCEDURE

65. Place the theodolite in a line coincident with the SXT LLOS and cover the SXT StLOS.

66. Level theodolite base to the plate spirit level and level the altitude spirit level. Adjust the telescope focus to infinity. Set telescope to approximately 90°. Install the portable light assembly and adapter in the SXT eyepiece assembly. While observing the theodolite image, adjust the G & N Mounting Fixture until the SXT reticle is superimposed on the theodolite horizontal filar.

67. Align the theodolite horizontal filar to the SXT reticle and record the vertical angle.

68. Reverse and plunge the theodolite telescope and repeat step 67.

69. Repeat steps 67 and 68 for seven additional pairs of readings. After each time that step 68 is completed, drive the theodolite elevation off prior to realigning to the SXT reticle.

70. Place the theodolite in a line coincident with the SXT StLOS and cover the SXT LLOS.

71. Repeat step 66.

72. Repeat steps 67, 68, and 69.

73. Complete calculations for SXT StLOS to LLOS parallelism error.

74. Continue normal test sequence at step 9.

JDC 19128

IMPORTANT Insure that JDC 19128 has been performed within the last six months.

INTERVAL

TOOLS AND MATERIAL Variable Deviation Wedge
SCT Resolution Card

NOTE: The G & N Mounting Fixture shall be set at the 0.0° position.

1. Press OPTICS POWER ON pushbutton on Test Control Panel. OPTICS POWER ON pushbutton shall light. Insure that the TELESCOPE TRUNNION switch on the Indicator Control panel is set to SLAVE TO SXT and that the TRACKER switch is in the OFF position.

2. Set the CONTROLLER COUPLING switch to DIRECT and the CONTROLLER SPEED switch to HI.

3. Deleted.

4. Set the OPTICS MODE switch on the Indicator Control panel to ZERO. After one minute, perform the following DSKY operations:

VERB 06 NOUN 55 ENTR

Record the DSKY Row 1 (Shaft Angle) and Row 2 (Trunnion LOS Angle) indications on lines (a) and (b) of the Data Sheet.

5. Place the Variable Deviation Wedge (VDW) in front of target number 1 using the VDW base which allows deviation to be measured in the vertical plane (setting knob points upward). Set VDW dial to zero.

VERIFICATION WITH SIDL REQUIRED BEFORE USE

JOB OPTICS POSITIONAL ACCURACY TEST

JDC 12214 **REV** F **PAGE** 2 **OF** 6

SUBSYSTEM G & N SYSTEM

ASSY

6. Cover the SXT StLOS. Sight through the SXT LLOS and adjust the G & N Mounting Fixture until the horizontal reticle line of the SXT is coincident with the dot and horizontal reticle line of target number 1.

7. Sight through the SXT LLOS and move the VDW laterally until target number 1 reticle is seen clearly. Adjust the VDW dial until the central horizontal reticle line of SXT is coincident with dot and horizontal reticle line of target number 1. Record the VDW reading on line (c). Uncover the SXT StLOS.

NOTE: If the value obtained for line (g) in step 8 is not within tolerance, perform the alternate procedure given in steps 65 through 74 to verify that an out-of-tolerance condition exists.

8. Cover the SXT LLOS. Sight through the SXT StLOS and adjust the VDW dial until the central horizontal reticle line of SXT is coincident with the dot and horizontal reticle line of target number 1. Record the VDW reading on line (e). Complete lines (d), (f), and (g). Uncover SXT LLOS.

9. Rotate the VDW to the other base (setting knob points right). Set the VDW dial to zero.

10. Set the OPTICS MODE switch on the Indicator Control Panel to CMC and perform the following DSKY operations:

VERB 41 NOUN 55 ENTR
+27000 ENTR
+45000 ENTR

Wait until optics stop driving before proceeding.

11. Cover the SXT StLOS. Sight through the SXT LLOS and move the VDW laterally until the target number 1 reticle is seen clearly. Adjust the VDW dial until the central vertical reticle line of SXT is coincident with dot and vertical reticle line of target number 1. Record the VDW dial reading on line (g.1). Uncover the SXT StLOS.

12. Complete lines (i), (j), and (k) on the Data Sheet.

13. Place the VDW in front of target number 3 and cover target number 1.

14. Set the VDW to the value recorded on line (k).

15. Set the OPTICS MODE and CONTROLLER SPEED switches on the Indicator Control panel to MAN and LO respectively.

JOB OPTICS POSITIONAL ACCURACY TEST

JDC 12214 **REV** F **PAGE** 3 **OF** 6

SUBSYSTEM G & N SYSTEM

ASSY

16. Manipulate the Optics Hand Controller vertically to position the SXT StLOS until the central dot on reticle of target number 3 approaches the vertical crosshair on the SXT reticle. At the instant of coincidence, press the MARK pushbutton.

NOTE: VERB 06, NOUN 56 shall appear on the CMC DSKY indicating optical CDU and time displays.

17. Record the DSKY Row 2 indication on line (1) of the Data Sheet. Repeat step 16 two more times, recording the DSKY Row 2 indication for each MARK.

18. Observe the three bit counts of line (1) of the Data Sheet. If two of the three counts are equal, record this count in line (m). If all three counts are different, record the count which falls between the smallest and the largest on line (m).

19. Complete lines (n) and (o) of the Data Sheet.

20. Set the VDW to the value recorded on line (o).

21. Manipulate the Optics Hand Controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 approaches the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

22. Record the DSKY Row 2 indication on line (p) of the Data Sheet. Repeat step 21 two more times, recording the DSKY Row 2 indication for each MARK.

23. Observe the three bit counts of line (p). If two of the three counts are equal, record this count on line (q). If all three counts are different, record the count which falls between the smallest and the largest on line (q).

24. Complete lines (r), (s), (t) and (u).

25. Set the VDW to the value recorded on line (u).

26. Manipulate the Optics Hand Controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 is approaching the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

27. Record the DSKY Row 2 indication on line (v). Repeat step 26 two more times, recording the DSKY Row 2 indication for each MARK.

28. Observe the three bit counts of line (v). If two of the three counts are equal, record this count on line (w). If all three counts are different, record the count which falls between the smallest and the largest on line (w).

29. Complete lines (x), (y), (z) and (aa).

30. Set the VDW to the value recorded on line (aa).

31. Manipulate the Optics Hand Controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 is approaching the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

32. Record the DSKY Row 2 indication on line (ab). Repeat step 31 two more times,

---

JOB OPTICS POSITIONAL ACCURACY TEST

SUBSYSTEM G & N SYSTEM

ASSY

recording the DSKY Row 2 indication for each MARK.

33. Observe the three bit counts of line (ab). If two of the three counts are equal, record this count on line (ac). If all three counts are different, record the count which falls between the smallest and the largest on line (ac).

34. Complete lines (ad), (ae), (af) and (ag).

35. Set the VDW to the value recorded on line (ag).

36. Manipulate the Optics Hand Controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 is approaching the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

37. Record the DSKY Row 2 indication on line (ah). Repeat step 36 two more times, recording the DSKY Row 2 indication for each MARK.

38. Observe the three bit counts on line (ah). If two of the three counts are equal, record this count on line (ai). If all three counts are different, record the count which falls between the smallest and the largest on line (ai).

39. Complete lines (aj), (ak), (al) and (am).

40. Set the VDW to the value recorded on line (am).

41. Manipulate the Optics Hand Controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 is approaching the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

42. Record the DSKY Row 2 indication on line (an). Repeat step 41 two more times, recording the DSKY Row 2 indication for each MARK.

43. Observe the three bit counts on line (an). If two of the three counts are equal, record this count on line (ao). If all three counts are different, record the count which falls between the smallest and the largest on line (ao).

44. Complete lines (ap), (aq), (ar) and (as).

45. Set the VDW to the value recorded on line (as).

46. Manipulate the Optics Hand Controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 is approaching the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

47. Record the DSKY Row 2 indication on line (at). Repeat step 46 two more times, recording the DSKY Row 2 indication for each MARK.

48. Observe the three bit counts on line (at). If two of the three counts are equal, record this count on line (au). If all three counts are different, record the count which falls between the smallest and the largest on line (au).

49. Complete lines (av) and (aw).

19. Complete lines (n) and (o) of the Data Sheet.

20. Set the VDW to the value recorded on line (o).

21. Manipulate the Optics Hand Controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 approaches the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

22. Record the DSKY Row 2 indication on line (p) of the Data Sheet. Repeat step 21 two more times, recording the DSKY Row 2 indication for each MARK.

23. Observe the three bit counts of line (p). If two of the three counts are equal, record this count on line (q). If all three counts are different, record the count which falls between the smallest and the largest on line (q).

24. Complete lines (r), (s), (t) and (u).

25. Set the VDW to the value recorded on line (u).

26. Manipulate the Optics Hand Controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 is approaching the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

27. Record the DSKY Row 2 indication on line (v). Repeat step 26 two more times, recording the DSKY Row 2 indication for each MARK.

28. Observe the three bit counts of line (v). If two of the three counts are equal, record this count on line (w). If all three counts are different, record the count which falls between the smallest and the largest on line (w).

29. Complete lines (x), (y), (z) and (aa).

30. Set the VDW to the value recorded on line (aa).

31. Manipulate the Optics Hand Controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 is approaching the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

32. Record the DSKY Row 2 indication on line (ab). Repeat step 31 two more times,

---

recording the DSKY Row 2 indication for each MARK.

33. Observe the three bit counts of line (ab). If two of the three counts are equal, record this count on line (ac). If all three counts are different, record the count which falls between the smallest and the largest on line (ac).

34. Complete lines (ad), (ae), (af) and (ag).

35. Set the VDW to the value recorded on line (ag).

36. Manipulate the Optics Hand Controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 is approaching the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

37. Record the DSKY Row 2 indication on line (ah). Repeat step 36 two more times, recording the DSKY Row 2 indication for each MARK.

38. Observe the three bit counts on line (ah). If two of the three counts are equal, record this count on line (ai). If all three counts are different, record the count which falls between the smallest and the largest on line (ai).

39. Complete lines (aj), (ak), (al) and (am).

40. Set the VDW to the value recorded on line (am).

41. Manipulate the Optics Hand Controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 is approaching the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

42. Record the DSKY Row 2 indication on line (an). Repeat step 41 two more times, recording the DSKY Row 2 indication for each MARK.

43. Observe the three bit counts on line (an). If two of the three counts are equal, record this count on line (ao). If all three counts are different, record the count which falls between the smallest and the largest on line (ao).

44. Complete lines (ap), (aq), (ar) and (as).

45. Set the VDW to the value recorded on line (as).

46. Manipulate the Optics Hand Controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 is approaching the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

47. Record the DSKY Row 2 indication on line (at). Repeat step 46 two more times, recording the DSKY Row 2 indication for each MARK.

48. Observe the three bit counts on line (at). If two of the three counts are equal, record this count on line (au). If all three counts are different, record the count which falls between the smallest and the largest on line (au).

49. Complete lines (av) and (aw).

50. Set the OPTICS MODE switch on the Indicator Control panel to ZERO. Wait 20 seconds then set the OPTICS MODE switch to MAN.

51. Set the CONTROLLER SPEED switch to HI, and using the Optics Hand Controller, drive the SXT until the Shaft TPAC indicates approximately +27000. Return the CONTROLLER SPEED switch to LO and manipulate the Optics Hand Controller to fine position and hold the SXT so the Shaft TPAC indicates +27000.

52. Insure that the horizontal reticle line of the SCT is coincident with the horizontal reticle line of target number 2 by adjusting the G & N Mounting Fixture cradle.

53. Set the OPTICS MODE switch on the Indicator Control panel to ZERO. Wait 20 seconds, then set the OPTICS MODE switch to MAN and the TELESCOPE TRUNNION switch to 25°. The target number 2 reticle pattern shall appear to intersect the number 0 on the SCT vertical reticle line.

54. Set the TELESCOPE TRUNNION switch to 0°. The target number 2 reticle pattern shall appear to intersect the center of the SCT reticle pattern.

55. Set the TELESCOPE TRUNNION switch to SLAVE TO SXT.

56. Set the OPTICS MODE switch to ZERO. Wait 20 seconds then set the OPTICS MODE switch to MAN.

57. Set the CONTROLLER SPEED switch to HI, and using the Optics Hand Controller, drive the SXT until the Shaft TPAC indicates approximately +27000. Set the CONTROLLER SPEED switch to LO and manipulate the Optics Hand Controller to fine position and hold the SXT so that the Shaft TPAC indicates +27000.

58. Insure the horizontal reticle line of the SCT is coincident with horizontal reticle line of target number 2 by adjusting the G & N Mounting Fixture cradle.

59. Sight through the SXT StLOS and, using the Optics Hand Controller, position the approximate center of the SXT StLOS reticle pattern to the number 10 resolution pattern of target number 1.

60. Sight through StLOS and LLOS and observe the number 10 and surrounding lines of target number 1 reticle. The number 10 and surrounding lines shall be clear and distinct. Record indication.

61. Position the SCT resolution card approximately 10 feet from the SCT trunnion axis.

62. Sight through the SCT LOS and, using the Optics Hand Controller, position the approximate center of the SCT LOS reticle pattern to the 3 min. resolution pattern of the resolution card.

63. Sight through the SCT and observe the number and surrounding lines on the resolution card. The number and surrounding lines shall be clear and distinct. Record indication.

64. Set the OPTICS MODE switch to ZERO. Wait 20 seconds then set the OPTICS MODE switch to MAN. Press OPTICS POWER ON pushbutton on Test Control panel. OPTICS POWER ON pushbutton shall go out.

DATE 30 JUN 66

ALTERNATE SXT LOS PARALLELISM PROCEDURE

65. Place the theodolite in a line coincident with the SXT LLOS and cover the SXT StLOS.

66. Level theodolite base to the plate spirit level and level the altitude spirit level. Adjust the telescope focus to infinity. Set telescope to approximately 90°. Install the portable light assembly and adapter in the SXT eyepiece assembly. While observing the theodolite image, adjust the G & N Mounting Fixture until the SXT reticle is superimposed on the theodolite horizontal filar.

67. Align the theodolite horizontal filar to the SXT reticle and record the vertical angle.

68. Reverse and plunge the theodolite telescope and repeat step 67.

69. Repeat steps 67 and 68 for seven additional pairs of readings. After each time that step 68 is completed, drive the theodolite elevation off prior to realigning to the SXT reticle.

70. Place the theodolite in a line coincident with the SXT StLOS and cover the SXT LLOS.

71. Repeat step 66.

72. Repeat steps 67, 68, and 69.

73. Complete calculations for SXT StLOS to LLOS parallelism error.

74. Continue normal test sequence at step 9.

REFERENCES PS 2015000
JDC 19128

IMPORTANT Insure that JDC 19128 has been performed within the last six months.

INTERVAL

TOOLS AND MATERIAL Variable Deviation Wedge
SCT Resolution Card

NOTE: The G & N Mounting Fixture shall be set at the 0.0° position.

1. Press OPTICS POWER ON pushbutton on Test Control Panel. OPTICS POWER ON pushbutton shall light. Insure that the TELESCOPE TRUNNION switch on the Indicator Control panel is set to SLAVE TO SXT and that the TRACKER switch is in the OFF position.

2. Set the CONTROLLER COUPLING switch to DIRECT and the CONTROLLER SPEED switch to HI.

3. Deleted.

4. Set the OPTICS MODE switch on the Indicator Control panel to ZERO. After one minute, perform the following DSKY operations:

VERB 06 NOUN 55 ENTR

Record the DSKY Row 1 (Shaft Ang e) and Row 2 (Trunnion LOS Angle) indications on lines (a) and (b) of the Data Sheet.

5. Place the Variable Deviation Wedge (VDW) in front of target number 1 using the VDW base which allows deviation to be measured in the vertical plane (setting knob points upward). Set VDW dial to zero.

VERIFICATION WITH SIDL REQUIRED BEFORE USE

DATE 30 JUN 66

JDC 12214 REV G PAGE 2 OF 6

SUBSYSTEM G & N SYSTEM

ASSY

6. Cover the SXT StLOS. Sight through the SXT LLOS and adjust the G & N Mounting Fixture until the horizontal reticle line of the SXT is coincident with the dot and horizontal reticle line of target number 1.

7. Sight through the SXT LLOS and move the VDW laterally until target number 1 reticle is seen clearly. Adjust the VDW dial until the central horizontal reticle line of SXT is coincident with dot and horizontal reticle line of target number 1. Record the VDW reading on line (c). Uncover the SXT StLOS.

NOTE: If the value obtained for line (g) in step 8 is not within tolerance, perform the alternate procedure given in steps 65 through 74 to verify that an out-of-tolerance condition exists.

8. Cover the SXT LLOS. Sight through the SXT StLOS and adjust the VDW dial until the central horizontal reticle line of SXT is coincident with the dot and horizontal reticle line of target number 1. Record the VDW reading on line (e). Complete lines (d), (f), and (g). Uncover SXT LLOS.

9. Rotate the VDW to the other base (setting knob points right). Set the VDW dial to zero.

10. Set the OPTICS MODE switch on the Indicator Control Panel to CMC and perform the following DSKY operations:

VERB 41 NOUN 55 ENTR
+27000 ENTR
+45000 ENTR

Wait until optics stop driving before proceeding.

11. Cover the SXT StLOS. Sight through the SXT LLOS and move the VDW laterally until the target number 1 reticle is seen clearly. Adjust the VDW dial until the central vertical reticle line of SXT is coincident with dot and vertical reticle line of target number 1. Record the VDW dial reading on line (g.1). Uncover the SXT StLOS.

12. Complete lines (i), (j), and (k) on the Data Sheet.

13. Place the VDW in front of target number 3 and cover target number 1.

14. Set the VDW to the value recorded on line (k).

15. Set the OPTICS MODE and CONTROLLER SPEED switches on the Indicator Control panel to MAN and LO respectively.

16. Manipulate the Optics Hand Controller vertically to position the SXT StLOS until the central dot on reticle of target number 3 approaches the vertical crosshair on the SXT reticle. At the instant of coincidence, press the MARK pushbutton.

NOTE: VERB 06, NOUN 56 shall appear on the CMC DSKY indicating optical CDU and time displays.

17. Record the DSKY Row 2 indication on line (l) of the Data Sheet. Repeat step 16 two more times, recording the DSKY Row 2 indication for each MARK.

18. Observe the three bit counts of line (l) of the Data Sheet. If two of the three counts are equal, record this count in line (m). If all three counts are different, record the count which falls between the smallest and the largest on line (m).

19. Complete lines (n) and (o) of the Data Sheet.

20. Set the VDW to the value recorded on line (o).

21. Manipulate the Optics Hand Controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 approaches the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

22. Record the DSKY Row 2 indication on line (p) of the Data Sheet. Repeat step 21 two more times, recording the DSKY Row 2 indication for each MARK.

23. Observe the three bit counts of line (p). If two of the three counts are equal, record this count on line (q). If all three counts are different, record the count which falls between the smallest and the largest on line (q).

24. Complete lines (r), (s), (t) and (u).

25. Set the VDW to the value recorded on line (u).

26. Manipulate the Optics Hand Controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 is approaching the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

27. Record the DSKY Row 2 indication on line (v). Repeat step 26 two more times, recording the DSKY Row 2 indication for each MARK.

28. Observe the three bit counts of line (v). If two of the three counts are equal, record this count on line (w). If all three counts are different, record the count which falls between the smallest and the largest on line (v).

29. Complete lines (x), (y), (z) and (aa).

30. Set the VDW to the value recorded on line (aa).

31. Manipulate the Optics Hand Controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 is approaching the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

32. Record the DSKY Row 2 indication on line (ab). Repeat step 31 two more times,

DATE 30 JUN 66

JOB OPTICS POSITIONAL ACCURACY TEST

JDC 12214 REV G PAGE 4 OF 6

SUBSYSTEM G & N SYSTEM

ASSY

recording the DSKY Row 2 indication for each MARK.

33. Observe the three bit counts of line (ab). If two of the three counts are equal, record this count on line (ac). If all three counts are different, record the count which falls between the smallest and the largest on line (ac).

34. Complete lines (ad), (ae), (af) and (ag).

35. Set the VDW to the value recorded on line (ag).

36. Manipulate the Optics Hand Controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 is approaching the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

37. Record the DSKY Row 2 indication on line (ah). Repeat step 36 two more times, recording the DSKY Row 2 indication for each MARK.

38. Observe the three bit counts on line (ah). If two of the three counts are equal, record this count on line (ai). If all three counts are different, record the count which falls between the smallest and the largest on line (ai).

39. Complete lines (aj), (ak), (al) and (am).

40. Set the VDW to the value recorded on line (am).

41. Manipulate the Optics Hand Controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 is approaching the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

42. Record the DSKY Row 2 indication on line (an). Repeat step 41 two more times, recording the DSKY Row 2 indication for each MARK.

43. Observe the three bit counts on line (an). If two of the three counts are equal, record this count on line (ao). If all three counts are different, record the count which falls between the smallest and the largest on line (ao).

44. Complete lines (ap), (aq), (ar) and (as).

45. Set the VDW to the value recorded on line (as).

46. Manipulate the Optics Hand Controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 is approaching the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

47. Record the DSKY Row 2 indication on line (at). Repeat step 46 two more times, recording the DSKY Row 2 indication for each MARK.

48. Observe the three bit counts on line (at). If two of the three counts are equal, record this count on line (au). If all three counts are different, record the count which falls between the smallest and the largest on line (au).

49. Complete lines (av) and (aw).

DATE 30 JUN 66

JOB OPTICS POSITIONAL ACCURACY TEST | JDC 12214 REV G PAGE 5 OF 6

SUBSYSTEM G & N SYSTEM | ASSY

50. Set the OPTICS MODE switch on the Indicator Control panel to ZERO. Wait 20 seconds then set the OPTICS MODE switch to MAN.

51. Set the CONTROLLER SPEED switch to HI, and using the Optics Hand Controller, drive the SXT until the Shaft TPAC indicates approximately +27000. Return the CONTROLLER SPEED switch to LO and manipulate the Optics Hand Controller to fine position and hold the SXT so the Shaft TPAC indicates +27000.

52. Insure that the horizontal reticle line of the SCT is coincident with the horizontal reticle line of target number 2 by adjusting the G & N Mounting Fixture cradle.

53. Set the OPTICS MODE switch on the Indicator Control panel to ZERO. Wait 20 seconds, then set the OPTICS MODE switch to MAN and the TELESCOPE TRUNNION switch to 25°. The target number 2 reticle pattern shall appear to intersect the number 0 on the SCT vertical reticle line.

54. Set the TELESCOPE TRUNNION switch to 0°. The target number 2 reticle pattern shall appear to intersect the center of the SCT reticle pattern.

55. Set the TELESCOPE TRUNNION switch to SLAVE TO SXT.

56. Set the OPTICS MODE switch to ZERO. Wait 20 seconds then set the OPTICS MODE switch to MAN.

57. Set the CONTROLLER SPEED switch to HI, and using the Optics Hand Controller, drive the SXT until the Shaft TPAC indicates approximately +27000. Set the CONTROLLER SPEED switch to LO and manipulate the Optics Hand Controller to fine position and hold the SXT so that the Shaft TPAC indicates +27000.

58. Insure the horizontal reticle line of the SCT is coincident with horizontal reticle line of target number 2 by adjusting the G & N Mounting Fixture cradle.

59. Sight through the SXT StLOS and, using the Optics Hand Controller, position the approximate center of the SXT StLOS reticle pattern to the number 10 resolution pattern of target number 1.

60. Sight through StLOS and LLOS and observe the number 10 and surrounding lines of target number 1 reticle. The number 10 and surrounding lines shall be clear and distinct. Record indication.

61. Position the SCT resolution card approximately 10 feet from the SCT trunnion axis.

62. Sight through the SCT LOS and, using the Optics Hand Controller, position the approximate center of the SCT LOS reticle pattern to the 3 min. resolution pattern of the resolution card.

63. Sight through the SCT and observe the number and surrounding lines on the resolution card. The number and surrounding lines shall be clear and distinct. Record indication.

64. Set the OPTICS MODE switch to ZERO. Wait 20 seconds then set the OPTICS MODE switch to MAN. Press OPTICS POWER ON pushbutton on Test Control panel. OPTICS POWER ON pushbutton shall go out.

DATE 30 JUN 66

JOB OPTICS POSITIONAL ACCURACY TEST | JDC 12214 REV G PAGE 6 OF 6

SUBSYSTEM G & N SYSTEM | ASSY

ALTERNATE SXT LOS PARALLELISM PROCEDURE

65. Place the theodolite in a line coincident with the SXT LLOS and cover the SXT StLOS.

66. Level theodolite base to the plate spirit level and level the altitude spirit level. Adjust the telescope focus to infinity. Set telescope to approximately 90°. Install the portable light assembly and adapter in the SXT eyepiece assembly. While observing the theodolite image, adjust the G & N Mounting Fixture until the SXT reticle is superimposed on the theodolite horizontal filar.

67. Align the theodolite horizontal filar to the SXT reticle and record the vertical angle.

68. Reverse and plunge the theodolite telescope and repeat step 67.

69. Repeat steps 67 and 68 for seven additional pairs of readings. After each time that step 68 is completed, drive the theodolite elevation off prior to realigning to the SXT reticle.

70. Place the theodolite in a line coincident with the SXT StLOS and cover the SXT LLOS.

71. Repeat step 66.

72. Repeat steps 67, 68, and 69.

73. Complete calculations for SXT StLOS to LLOS parallelism error.

74. Continue normal test sequence at step 9.

REFERENCES PS 2015000
JDC 19128

IMPORTANT Insure that JDC 19128 has been performed within the last six months.

INTERVAL

TOOLS AND MATERIAL Variable Deviation Wedge
SCT Resolution Card

NOTE: The G & N Mounting Fixture shall be set at the 0.0° position.

1. Press OPTICS POWER ON pushbutton on Test Control Panel. OPTICS POWER ON pushbutton shall light. Insure that the TELESCOPE TRUNNION switch on the Indicator Control panel is set to SLAVE TO SXT and that the TRACKER switch is in the OFF position.

2. Set the CONTROLLER COUPLING switch to DIRECT and the CONTROLLER SPEED switch to HI.

3. Deleted.

4. Set the OPTICS MODE switch on the Indicator Control panel to ZERO. After one minute, perform the following DSKY operations:

VERB 06 NOUN 55 ENTR

Record the DSKY Row 1 (Shaft Angle) and Row 2 (Trunnion LOS Angle) indications on lines (a) and (b) of the Data Sheet.

5. Place the Variable Deviation Wedge (VDW) in front of target number 1 using the VDW base which allows deviation to be measured in the vertical plane (setting knob points upward). Set VDW dial to zero.

VERIFICATION WITH SIDL REQUIRED BEFORE USE

---

6. Cover the SXT StLOS. Sight through the SXT LLOS and adjust the G & N Mounting Fixture until the horizontal reticle line of the SXT is coincident with the dot and horizontal reticle line of target number 1.

7. Sight through the SXT LLOS and move the VDW laterally until target number 1 reticle is seen clearly. Adjust the VDW dial until the central horizontal reticle line of SXT is coincident with dot and horizontal reticle line of target number 1. Record the VDW reading on line (c). Uncover the SXT StLOS.

NOTE: If the value obtained for line (g) in step 8 is not within tolerance, perform the alternate procedure given in steps 65 through 74 to verify that an out-of-tolerance condition exists.

8. Cover the SXT LLOS. Sight through the SXT StLOS and adjust the VDW dial until the central horizontal reticle line of SXT is coincident with the dot and horizontal reticle line of target number 1. Record the VDW reading on line (e). Complete lines (d), (f), and (g). Uncover SXT LLOS.

9. Rotate the VDW to the other base (setting knob points right). Set the VDW dial to zero.

10. Set the OPTICS MODE switch on the Indicator Control Panel to CMC and perform the following DSKY operations:

VERB 41 NOUN 55 ENTR
+27000 ENTR
+45000 ENTR

Wait until optics stop driving before proceeding.

11. Cover the SXT StLOS. Sight through the SXT LLOS and move the VDW laterally until the target number 1 reticle is seen clearly. Adjust the VDW dial until the central vertical reticle line of SXT is coincident with dot and vertical reticle line of target number 1. Record the VDW dial reading on line (g.1). Uncover the SXT StLOS.

12. Complete lines (i), (j), and (k) on the Data Sheet.

13. Place the VDW in front of target number 3 and cover target number 1.

14. Set the VDW to the value recorded on line (k).

15. Set the OPTICS MODE and CONTROLLER SPEED switches on the Indicator Control panel to MAN and LO respectively.

---

16. Manipulate the Optics Hand Controller vertically to position the SXT StLOS until the central dot on reticle of target number 3 approaches the vertical crosshair on the SXT reticle. At the instant of coincidence, press the MARK pushbutton.

NOTE: VERB 06, NOUN 56 shall appear on the CMC DSKY indicating optical CDU and time displays.

17. Record the DSKY Row 2 indication on line (l) of the Data Sheet. Repeat step 16 two more times, recording the DSKY Row 2 indication for each MARK.

18. Observe the three bit counts of line (l) of the Data Sheet. If two of the three counts are equal, record this count in line (m). If all three counts are different, record the count which falls between the smallest and the largest on line (m).

19. Complete lines (n) and (o) of the Data Sheet.

20. Set the VDW to the value recorded on line (o).

21. Manipulate the Optics Hand Controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 approaches the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

22. Record the DSKY Row 2 indication on line (p) of the Data Sheet. Repeat step 21 two more times, recording the DSKY Row 2 indication for each MARK.

23. Observe the three bit counts of line (p). If two of the three counts are equal, record this count on line (q). If all three counts are different, record the count which falls between the smallest and the largest on line (q).

24. Complete lines (r), (s), (t) and (u).

25. Set the VDW to the value recorded on line (u).

26. Manipulate the Optics Hand Controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 is approaching the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

27. Record the DSKY Row 2 indication on line (v). Repeat step 26 two more times, recording the DSKY Row 2 indication for each MARK.

28. Observe the three bit counts of line (v). If two of the three counts are equal, record this count on line (w). If all three counts are different, record the count which falls between the smallest and the largest on line (w).

29. Complete lines (x), (y), (z) and (aa).

30. Set the VDW to the value recorded on line (aa).

31. Manipulate the Optics Hand Controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 is approaching the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

32. Record the DSKY Row 2 indication on line (ab). Repeat step 31 two more times,

---

recording the DSKY Row 2 indication for each MARK.

33. Observe the three bit counts of line (ab). If two of the three counts are equal, record this count on line (ac). If all three counts are different, record the count which falls between the smallest and the largest on line (ac).

34. Complete lines (ad), (ae), (af) and (ag).

35. Set the VDW to the value recorded on line (ag).

36. Manipulate the Optics Hand Controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 is approaching the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

37. Record the DSKY Row 2 indication on line (ah). Repeat step 36 two more times, recording the DSKY Row 2 indication for each MARK.

38. Observe the three bit counts on line (ah). If two of the three counts are equal, record this count on line (ai). If all three counts are different, record the count which falls between the smallest and the largest on line (ai).

39. Complete lines (aj), (ak), (al) and (am).

40. Set the VDW to the value recorded on line (am).

41. Manipulate the Optics Hand Controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 is approaching the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

42. Record the DSKY Row 2 indication on line (an). Repeat step 41 two more times, recording the DSKY Row 2 indication for each MARK.

43. Observe the three bit counts on line (an). If two of the three counts are equal, record this count on line (ao). If all three counts are different, record the count which falls between the smallest and the largest on line (ao).

44. Complete lines (ap), (aq), (ar) and (as).

45. Set the VDW to the value recorded on line (as).

46. Manipulate the Optics Hand Controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 is approaching the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

47. Record the DSKY Row 2 indication on line (at). Repeat step 46 two more times, recording the DSKY Row 2 indication for each MARK.

48. Observe the three bit counts on line (at). If two of the three counts are equal, record this count on line (au). If all three counts are different, record the count which falls between the smallest and the largest on line (au).

49. Complete lines (av) and (aw).

50. Set the OPTICS MODE switch on the Indicator Control panel to ZERO. Wait 20 seconds then set the OPTICS MODE switch to MAN.

51. Set the CONTROLLER SPEED switch to HI, and using the Optics Hand Controller, drive the SXT until the Shaft TPAC indicates approximately +27000. Return the CONTROLLER SPEED switch to LO and manipulate the Optics Hand Controller to fine position and hold the SXT so the Shaft TPAC indicates +27000.

52. Insure that the horizontal reticle line of the SCT is coincident with the horizontal reticle line of target number 2 by adjusting the G & N Mounting Fixture cradle.

53. Set the OPTICS MODE switch on the Indicator Control panel to ZERO. Wait 20 seconds, then set the OPTICS MODE switch to MAN and the TELESCOPE TRUNNION switch to 25°. The target number 2 reticle pattern shall appear to intersect the number 0 on the SCT vertical reticle line.

54. Set the TELESCOPE TRUNNION switch to 0°. The target number 2 reticle pattern shall appear to intersect the center of the SCT reticle pattern.

55. Set the TELESCOPE TRUNNION switch to SLAVE TO SXT.

56. Set the OPTICS MODE switch to ZERO. Wait 20 seconds then set the OPTICS MODE switch to MAN.

57. Set the CONTROLLER SPEED switch to HI, and using the Optics Hand Controller, drive the SXT until the Shaft TPAC indicates approximately +27000. Set the CONTROLLER SPEED switch to LO and manipulate the Optics Hand Controller to fine position and hold the SXT so that the Shaft TPAC indicates +27000.

58. Insure the horizontal reticle line of the SCT is coincident with horizontal reticle line of target number 2 by adjusting the G & N Mounting Fixture cradle.

59. Sight through the SXT StLOS and, using the Optics Hand Controller, position the approximate center of the SXT StLOS reticle pattern to the number 10 resolution pattern of target number 1.

60. Sight through StLOS and LLOS and observe the number 10 and surrounding lines of target number 1 reticle. The number 10 and surrounding lines shall be clear and distinct. Record indication.

61. Position the SCT resolution card approximately 10 feet from the SCT trunnion axis.

62. Sight through the SCT LOS and, using the Optics Hand Controller, position the approximate center of the SCT LOS reticle pattern to the 3 min. resolution pattern of the resolution card.

63. Sight through the SCT and observe the number and surrounding lines on the resolution card. The number and surrounding lines shall be clear and distinct. Record indication.

64. Set the OPTICS MODE switch to ZERO. Wait 20 seconds then set the OPTICS MODE switch to MAN. Press OPTICS POWER ON pushbutton on Test Control panel. OPTICS POWER ON pushbutton shall go out.

ALTERNATE SXT LOS PARALLELISM PROCEDURE

65. Place the theodolite in a line coincident with the SXT LLOS and cover the SXT StLOS.

66. Level theodolite base to the plate spirit level and level the altitude spirit level. Adjust the telescope focus to infinity. Set telescope to approximately 90°. Install the portable light assembly and adapter in the SXT eyepiece assembly. While observing the theodolite image, adjust the G & N Mounting Fixture until the SXT reticle is superimposed on the theodolite horizontal filar.

67. Align the theodolite horizontal filar to the SXT reticle and record the vertical angle.

68. Reverse and plunge the theodolite telescope and repeat step 67.

69. Repeat steps 67 and 68 for seven additional pairs of readings. After each time that step 68 is completed, drive the theodolite elevation off prior to realigning to the SXT reticle.

70. Place the theodolite in a line coincident with the SXT StLOS and cover the SXT LLOS.

71. Repeat step 66.

72. Repeat steps 67, 68, and 69.

73. Complete calculations for SXT StLOS to LLOS parallelism error.

74. Continue normal test sequence at step 9.

REFERENCES PS 2015000
JDC 19128

IMPORTANT Insure that JDC 19128 has been performed within the last six months.

INTERVAL

TOOLS AND MATERIAL Variable Deviation Wedge
SCT Resolution Card

NOTE: The G & N Mounting Fixture shall be set at the 0.0° position.

1. Press OPTICS POWER ON pushbutton on Test Control Panel. OPTICS POWER ON pushbutton shall light. Insure that the TELESCOPE TRUNNION switch on the Indicator Control panel is set to SLAVE TO SXT and that the TRACKER switch is in the OFF position.

2. Set the CONTROLLER COUPLING switch to DIRECT and the CONTROLLER SPEED switch to HI.

3. Place OPTICS MODE switch on the Indicator Control Panel to MAN.

4. Set the OPTICS MODE switch on the Indicator Control panel to ZERO. After one minute, perform the following DSKY operations:

VERB 06 NOUN 55 ENTR

Record the DSKY Row 1 (Shaft Angle) and Row 2 (Trunnion LOS Angle) indications on lines (a) and (b) of the Data Sheet.

5. Place the Variable Deviation Wedge (VDW) in front of target number 1 using the VDW base which allows deviation to be measured in the vertical plane (setting knob points upward). Set VDW dial to zero.

VERIFICATION WITH SIDL REQUIRED BEFORE USE

6. Cover the SXT StLOS. Sight through the SXT LLOS and adjust the G & N Mounting Fixture until the horizontal reticle line of the SXT is coincident with the dot and horizontal reticle line of target number 1.

7. Sight through the SXT LLOS and move the VDW laterally until target number 1 reticle is seen clearly. Adjust the VDW dial until the central horizontal reticle line of SXT is coincident with dot and horizontal reticle line of target number 1. Record the VDW reading on line (c). Uncover the SXT StLOS.

NOTE: If the value obtained for line (g) in step 8 is not within tolerance, perform the alternate procedure given in steps 65 through 74 to verify that an out-of-tolerance condition exists.

8. Cover the SXT LLOS. Sight through the SXT StLOS and adjust the VDW dial until the central horizontal reticle line of SXT is coincident with the dot and horizontal reticle line of target number 1. Record the VDW reading on line (e). Complete lines (d), (f), and (g). Uncover SXT LLOS.

9. Rotate the VDW to the other base (setting knob points right). Set the VDW dial to zero.

10. Set the OPTICS MODE switch on the Indicator Control Panel to CMC and perform the following DSKY operations:

VERB 41 NOUN 55 ENTR
+27000 ENTR
+45000 ENTR

Wait until optics stop driving before proceeding.

11. Cover the SXT StLOS. Sight through the SXT LLOS and move the VDW laterally until the target number 1 reticle is seen clearly. Adjust the VDW dial until the central vertical reticle line of SXT is coincident with dot and vertical reticle line of target number 1. Record the VDW dial reading on line (g.1). Uncover the SXT StLOS.

12. Complete lines (i), (j), and (k) on the Data Sheet.

13. Place the VDW in front of target number 3 and cover target number 1.

14. Set the VDW to the value recorded on line (k).

15. Set the OPTICS MODE and CONTROLLER SPEED switches on the Indicator Control panel to MAN and LO respectively.

16. Manipulate the Optics Hand Controller vertically to position the SXT StLOS until the central dot on reticle of target number 3 approaches the vertical crosshair on the SXT reticle. At the instant of coincidence, press the MARK pushbutton.

NOTE: VERB 06, NOUN 56 shall appear on the CMC DSKY indicating optical CDU and time displays.

17. Record the DSKY Row 2 indication on line (l) of the Data Sheet. Repeat step 16 two more times, recording the DSKY Row 2 indication for each MARK.

18. Observe the three bit counts of line (l) of the Data Sheet. If two of the three counts are equal, record this count in line (m). If all three counts are different, record the count which falls between the smallest and the largest on line (m).

19. Complete lines (n) and (o) of the Data Sheet.

20. Set the VDW to the value recorded on line (o).

21. Manipulate the Optics Hand Controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 approaches the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

22. Record the DSKY Row 2 indication on line (p) of the Data Sheet. Repeat step 21 two more times, recording the DSKY Row 2 indication for each MARK.

23. Observe the three bit counts of line (p). If two of the three counts are equal, record this count on line (q). If all three counts are different, record the count which falls between the smallest and the largest on line (q).

24. Complete lines (r), (s), (t) and (u).

25. Set the VDW to the value recorded on line (u).

26. Manipulate the Optics Hand Controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 is approaching the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

27. Record the DSKY Row 2 indication on line (v). Repeat step 26 two more times, recording the DSKY Row 2 indication for each MARK.

28. Observe the three bit counts of line (v). If two of the three counts are equal, record this count on line (w). If all three counts are different, record the count which falls between the smallest and the largest on line (w).

29. Complete lines (x), (y), (z) and (aa).

30. Set the VDW to the value recorded on line (aa).

31. Manipulate the Optics Hand Controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 is approaching the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

32. Record the DSKY Row 2 indication on line (ab). Repeat step 31 two more times, recording the DSKY Row 2 indication for each MARK.

33. Observe the three bit counts of line (ab). If two of the three counts are equal, record this count on line (ac). If all three counts are different, record the count which falls between the smallest and the largest on line (ac).

34. Complete lines (ad), (ae), (af) and (ag).

35. Set the VDW to the value recorded on line (ag).

36. Manipulate the Optics Hand Controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 is approaching the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

37. Record the DSKY Row 2 indication on line (ah). Repeat step 36 two more times, recording the DSKY Row 2 indication for each MARK.

38. Observe the three bit counts on line (ah). If two of the three counts are equal, record this count on line (ai). If all three counts are different, record the count which falls between the smallest and the largest on line (ai).

39. Complete lines (aj), (ak), (al) and (am).

40. Set the VDW to the value recorded on line (am).

41. Manipulate the Optics Hand Controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 is approaching the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

42. Record the DSKY Row 2 indication on line (an). Repeat step 41 two more times, recording the DSKY Row 2 indication for each MARK.

43. Observe the three bit counts on line (an). If two of the three counts are equal, record this count on line (ao). If all three counts are different, record the count which falls between the smallest and the largest on line (ao).

44. Complete lines (ap), (aq), (ar) and (as).

45. Set the VDW to the value recorded on line (as).

46. Manipulate the Optics Hand Controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 is approaching the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

47. Record the DSKY Row 2 indication on line (at). Repeat step 46 two more times, recording the DSKY Row 2 indication for each MARK.

48. Observe the three bit counts on line (at). If two of the three counts are equal, record this count on line (au). If all three counts are different, record the count which falls between the smallest and the largest on line (au).

49. Complete lines (av) and (aw).

SUBSYSTEM G & N SYSTEM ASSY

50. Set the OPTICS MODE switch on the Indicator Control panel to ZERO. Wait 20 seconds then set the OPTICS MODE switch to MAN.

51. Set the CONTROLLER SPEED switch to HI, and using the Optics Hand Controller, drive the SXT until the Shaft TPAC indicates approximately +27000. Return the CONTROLLER SPEED switch to LO and manipulate the Optics Hand Controller to fine position and hold the SXT so the Shaft TPAC indicates +27000.

52. Insure that the horizontal reticle line of the SCT is coincident with the horizontal reticle line of target number 2 by adjusting the G & N Mounting Fixture cradle.

53. Set the OPTICS MODE switch on the Indicator Control panel to ZERO. Wait 20 seconds, then set the OPTICS MODE switch to MAN and the TELESCOPE TRUNNION switch to 25°. The target number 2 reticle pattern shall appear to intersect the number 0 on the SCT vertical reticle line.

54. Set the TELESCOPE TRUNNION switch to 0°. The target number 2 reticle pattern shall appear to intersect the center of the SCT reticle pattern.

55. Set the TELESCOPE TRUNNION switch to SLAVE TO SXT.

56. Set the OPTICS MODE switch to ZERO. Wait 20 seconds then set the OPTICS MODE switch to MAN.

57. Set the CONTROLLER SPEED switch to HI, and using the Optics Hand Controller, drive the SXT until the Shaft TPAC indicates approximately +27000. Set the CONTROLLER SPEED switch to LO and manipulate the Optics Hand Controller to fine position and hold the SXT so that the Shaft TPAC indicates +27000.

58. Insure the horizontal reticle line of the SCT is coincident with horizontal reticle line of target number 2 by adjusting the G & N Mounting Fixture cradle.

59. Sight through the SXT StLOS and, using the Optics Hand Controller, position the approximate center of the SXT StLOS reticle pattern to the number 10 resolution pattern of target number 1.

60. Sight through StLOS and LLOS and observe the number 10 and surrounding lines of target number 1 reticle. The number 10 and surrounding lines shall be clear and distinct. Record indication.

61. Position the SCT resolution card approximately 10 feet from the SCT trunnion axis.

62. Sight through the SCT LOS and, using the Optics Hand Controller, position the approximate center of the SCT LOS reticle pattern to the 3 min. resolution pattern of the resolution card.

63. Sight through the SCT and observe the number and surrounding lines on the resolution card. The number and surrounding lines shall be clear and distinct. Record indication.

64. Set the OPTICS MODE switch to ZERO. Wait 20 seconds then set the OPTICS MODE switch to MAN. Press OPTICS POWER ON pushbutton on Test Control panel. OPTICS POWER ON pushbutton shall go out.

DATE 30 JUN 66

SUBSYSTEM G & N SYSTEM ASSY

ALTERNATE SXT LOS PARALLELISM PROCEDURE

65. Place the theodolite in a line coincident with the SXT LLOS and cover the SXT StLOS.

66. Level theodolite base to the plate spirit level and level the altitude spirit level. Adjust the telescope focus to infinity. Set telescope to approximately 90°. Install the portable light assembly and adapter in the SXT eyepiece assembly. While observing the theodolite image, adjust the G & N Mounting Fixture until the SXT reticle is superimposed on the theodolite horizontal filar.

67. Align the theodolite horizontal filar to the SXT reticle and record the vertical angle.

68. Reverse and plunge the theodolite telescope and repeat step 67.

69. Repeat steps 67 and 68 for seven additional pairs of readings. After each time that step 68 is completed, drive the theodolite elevation off prior to realigning to the SXT reticle.

70. Place the theodolite in a line coincident with the SXT StLOS and cover the SXT LLOS.

71. Repeat step 66.

72. Repeat steps 67, 68, and 69.

73. Complete calculations for SXT StLOS to LLOS parallelism error.

74. Continue normal test sequence at step 9.

REFERENCES PS 2015000
JDC 19128

IMPORTANT 1. Insure that JDC 19128 has been performed within the last six months. (Cont. below)

INTERVAL

TOOLS AND MATERIAL Variable Deviation Wedge
SCT Resolution Card

IMPORTANT: 2. Avoid repeated slewing of SXT shaft and trunnion axes into their mechanical stops.

NOTE: The G & N Mounting Fixture shall be set at the 0.0° position.

1. Press OPTICS POWER ON pushbutton on Test Control Panel. OPTICS POWER ON pushbutton shall light. Insure that the TELESCOPE TRUNNION switch on the Indicator Control panel is set to SLAVE TO SXT and that the TRACKER switch is in the OFF position.

2. Set the CONTROLLER COUPLING switch to DIRECT and the CONTROLLER SPEED switch to HI.

3. Place OPTICS MODE switch on the Indicator Control Panel to MAN.

4. Set the OPTICS MODE switch on the Indicator Control panel to ZERO. After one minute, perform the following DSKY operations:

VERB 06 NOUN 56 ENTR

Record the DSKY Row 1 (Shaft Angle) and Row 2 (Trunnion LOS Angle) indications on lines (a) and (b) of the Data Sheet.

5. Place the Variable Deviation Wedge (VDW) in front of target number 1 using the VDW base which allows deviation to be measured in the vertical plane (setting knob points upward). Set VDW dial to zero.

VERIFICATION WITH SIDL REQUIRED BEFORE USE

DATE 30 JUN 66

FCR 1 0 [illegible]
Chg. 3-[illegible]

SUBSYSTEM G & N SYSTEM ASSY

6. Cover the SXT StLOS. Sight through the SXT LLOS and adjust the G & N Mounting Fixture until the horizontal reticle line of the SXT is coincident with the dot and horizontal reticle line of target number 1.

7. Sight through the SXT LLOS and move the VDW laterally until target number 1 reticle is seen clearly. Adjust the VDW dial until the central horizontal reticle line of SXT is coincident with dot and horizontal reticle line of target number 1. Record the VDW reading on line (c). Uncover the SXT StLOS.

NOTE: If the value obtained for line (g) in step 8 is not within tolerance, perform the alternate procedure given in steps 65 through 74 to verify that an out-of-tolerance condition exists.

8. Cover the SXT LLOS. Sight through the SXT StLOS and adjust the VDW dial until the central horizontal reticle line of SXT is coincident with the dot and horizontal reticle line of target number 1. Record the VDW reading on line (e). Complete lines (d), (f), and (g). Uncover SXT LLOS.

9. Rotate the VDW to the other base (setting knob points right). Set the VDW dial to zero.

10. Set the OPTICS MODE switch on the Indicator Control Panel to CMC and perform the following DSKY operations:

VERB 41 NOUN 55 ENTR
+27000 ENTR
+45000 ENTR

Wait until optics stop driving before proceeding.

11. Cover the SXT StLOS. Sight through the SXT LLOS and move the VDW laterally until the target number 1 reticle is seen clearly. Adjust the VDW dial until the central vertical reticle line of SXT is coincident with dot and vertical reticle line of target number 1. Record the VDW dial reading on line (g.1). Uncover the SXT StLOS.

12. Complete lines (i), (j), and (k) on the Data Sheet.

13. Place the VDW in front of target number 3 and cover target number 1.

14. Set the VDW to the value recorded on line (k).

15. Set the OPTICS MODE and CONTROLLER SPEED switches on the Indicator Control panel to MAN and LO respectively.

SUBSYSTEM G & N SYSTEM ASSY

16. Manipulate the Optics Hand Controller vertically to position the SXT StLOS until the central dot on reticle of target number 3 approaches the vertical crosshair on the SXT reticle. At the instant of coincidence, press the MARK pushbutton.

NOTE: VERB 06, NOUN 56 shall appear on the CMC DSKY indicating optical CDU and time displays.

17. Record the DSKY Row 2 indication on line (l) of the Data Sheet. Repeat step 16 two more times, recording the DSKY Row 2 indication for each MARK.

18. Observe the three bit counts of line (l) of the Data Sheet. If two of the three counts are equal, record this count in line (m). If all three counts are different, record the count which falls between the smallest and the largest on line (m).

19. Complete lines (n) and (o) of the Data Sheet.

20. Set the VDW to the value recorded on line (o).

21. Manipulate the Optics Hand Controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 approaches the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

22. Record the DSKY Row 2 indication on line (p) of the Data Sheet. Repeat step 21 two more times, recording the DSKY Row 2 indication for each MARK.

23. Observe the three bit counts of line (p). If two of the three counts are equal, record this count on line (q). If all three counts are different, record the count which falls between the smallest and the largest on line (q).

24. Complete lines (r), (s), (t) and (u).

25. Set the VDW to the value recorded on line (u).

26. Manipulate the Optics Hand Controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 is approaching the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

27. Record the DSKY Row 2 indication on line (v). Repeat step 26 two more times, recording the DSKY Row 2 indication for each MARK.

28. Observe the three bit counts of line (v). If two of the three counts are equal, record this count on line (w). If all three counts are different, record the count which falls between the smallest and the largest on line (w).

29. Complete lines (x), (y), (z) and (aa).

30. Set the VDW to the value recorded on line (aa).

31. Manipulate the Optics Hand Controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 is approaching the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

32. Record the DSKY Row 2 indication on line (ab). Repeat step 31 two more times,

---

SUBSYSTEM G & N SYSTEM ASSY

recording the DSKY Row 2 indication for each MARK.

33. Observe the three bit counts of line (ab). If two of the three counts are equal, record this count on line (ac). If all three counts are different, record the count which falls between the smallest and the largest on line (ac).

34. Complete lines (ad), (ae), (af) and (ag).

35. Set the VDW to the value recorded on line (ag).

36. Manipulate the Optics Hand Controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 is approaching the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

37. Record the DSKY Row 2 indication on line (ah). Repeat step 36 two more times, recording the DSKY Row 2 indication for each MARK.

38. Observe the three bit counts on line (ah). If two of the three counts are equal, record this count on line (ai). If all three counts are different, record the count which falls between the smallest and the largest on line (ai).

39. Complete lines (aj), (ak), (al) and (am).

40. Set the VDW to the value recorded on line (am).

41. Manipulate the Optics Hand Controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 is approaching the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

42. Record the DSKY Row 2 indication on line (an). Repeat step 41 two more times, recording the DSKY Row 2 indication for each MARK.

43. Observe the three bit counts on line (an). If two of the three counts are equal, record this count on line (ao). If all three counts are different, record the count which falls between the smallest and the largest on line (ao).

44. Complete lines (ap), (aq), (ar) and (as).

45. Set the VDW to the value recorded on line (as).

46. Manipulate the Optics Hand Controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 is approaching the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

47. Record the DSKY Row 2 indication on line (at). Repeat step 46 two more times, recording the DSKY Row 2 indication for each MARK.

48. Observe the three bit counts on line (at). If two of the three counts are equal, record this count on line (au). If all three counts are different, record the count which falls between the smallest and the largest on line (au).

49. Complete lines (av) and (aw).

50. Set the OPTICS MODE switch on the Indicator Control panel to ZERO. Wait 20 seconds then set the OPTICS MODE switch to MAN.

51. Set the CONTROLLER SPEED switch to HI, and using the Optics Hand Controller, drive the SXT until the Shaft TPAC indicates approximately +27000. Return the CONTROLLER SPEED switch to LO and manipulate the Optics Hand Controller to fine position and hold the SXT so the Shaft TPAC indicates +27000.

52. Insure that the horizontal reticle line of the SCT is coincident with the horizontal reticle line of target number 2 by adjusting the G & N Mounting Fixture cradle.

53. Set the OPTICS MODE switch on the Indicator Control panel to ZERO. Wait 20 seconds, then set the OPTICS MODE switch to MAN and the TELESCOPE TRUNNION switch to 25°. The target number 2 reticle pattern shall appear to intersect the number 0 on the SCT vertical reticle line.

54. Set the TELESCOPE TRUNNION switch to 0°. The target number 2 reticle pattern shall appear to intersect the center of the SCT reticle pattern.

55. Set the TELESCOPE TRUNNION switch to SLAVE TO SXT.

56. Set the OPTICS MODE switch to ZERO. Wait 20 seconds then set the OPTICS MODE switch to MAN.

57. Set the CONTROLLER SPEED switch to HI, and using the Optics Hand Controller, drive the SXT until the Shaft TPAC indicates approximately +27000. Set the CONTROLLER SPEED switch to LO and manipulate the Optics Hand Controller to fine position and hold the SXT so that the Shaft TPAC indicates +27000.

58. Insure the horizontal reticle line of the SCT is coincident with horizontal reticle line of target number 2 by adjusting the G & N Mounting Fixture cradle.

59. Sight through the SXT StLOS and, using the Optics Hand Controller, position the approximate center of the SXT StLOS reticle pattern to the number 10 resolution pattern of target number 1.

60. Sight through StLOS and LLOS and observe the number 10 and surrounding lines of target number 1 reticle. The number 10 and surrounding lines shall be clear and distinct. Record indication.

61. Position the SCT resolution card approximately 10 feet from the SCT trunnion axis.

62. Sight through the SCT LOS and, using the Optics Hand Controller, position the approximate center of the SCT LOS reticle pattern to the 3 min. resolution pattern of the resolution card.

63. Sight through the SCT and observe the number and surrounding lines on the resolution card. The number and surrounding lines shall be clear and distinct. Record indication.

64. Set the OPTICS MODE switch to ZERO. Wait 20 seconds then set the OPTICS MODE switch to MAN. Press OPTICS POWER ON pushbutton on Test Control panel. OPTICS POWER ON pushbutton shall go out.

DATE 30 JUN 66

ALTERNATE SXT LOS PARALLELISM PROCEDURE

65. Place the theodolite in a line coincident with the SXT LLOS and cover the SXT StLOS.

66. Level theodolite base to the plate spirit level and level the altitude spirit level. Adjust the telescope focus to infinity. Set telescope to approximately 90°. Install the portable light assembly and adapter in the SXT eyepiece assembly. While observing the theodolite image, adjust the G & N Mounting Fixture until the SXT reticle is superimposed on the theodolite horizontal filar.

67. Align the theodolite horizontal filar to the SXT reticle and record the vertical angle.

68. Reverse and plunge the theodolite telescope and repeat step 67.

69. Repeat steps 67 and 68 for seven additional pairs of readings. After each time that step 68 is completed, drive the theodolite elevation off prior to realigning to the SXT reticle.

70. Place the theodolite in a line coincident with the SXT StLOS and cover the SXT LLOS.

71. Repeat step 66.

72. Repeat steps 67, 68, and 69.

73. Complete calculations for SXT StLOS to LLOS parallelism error.

74. Continue normal test sequence at step 9.

JDC 19128

IMPORTANT See below.

INTERVAL

TOOLS AND MATERIAL Variable Deviation Wedge
SCT Resolution Card

IMPORTANT: 1. Insure that JDC 19128 has been performed within the last six months.

2. Avoid repeated slewing of SXT shaft and trunnion axes into their mechanical stops.

NOTE: 1. The G & N Mounting Fixture shall be set at the 0.0° position.

2. Step 1 applies to Indicator Control panel 2021290 only. Step 1A applies to all Indicator Control panels except 2021290.

1. Press OPTICS POWER ON pushbutton on Test Control panel. OPTICS POWER ON pushbutton shall light. Insure that OPTICS TEL TRUN switch on Indicator Control panel is set to SLAVE TO SXT and the OPTICS ZERO switch is set to OFF.

1A. Press OPTICS POWER ON pushbutton on Test Control panel. OPTICS POWER ON pushbutton shall light. Insure that OPTICS TELESCOPE TRUNNION switch on Indicator Control panel is set to SLAVE TO SXT and that OPTICS TRACKER switch is set to OFF.

VERIFICATION WITH SIDL REQUIRED BEFORE USE

DATE 30 JUN 66

JOB OPTICS POSITIONAL ACCURACY TEST
JDC 12214 REV L PAGE 2 OF 9
SUBSYSTEM G & N SYSTEM
ASSY

NOTE: Step 2 applies to Indicator Control panel 2021290 only. Step 2A applies to all Indicator Control panels except 2021290.

2. Set OPTICS COUPLING switch to DIRECT and set OPTICS SPEED switch to HI.

2A. Set OPTICS CONTROLLER COUPLING switch to DIRECT and set OPTICS CONTROLLER SPEED switch to HI.

3. Place OPTICS MODE switch on the Indicator Control Panel to MAN.

NOTE: Step 4 applies to Indicator Control panel 2021290 only. Step 4A applies to all Indicator Control panels except 2021290.

4. Set OPTICS ZERO switch to ZERO. After one minute, perform the following DSKY operations:

a. VERB 06 NOUN 55 ENTR

b. Record Row 1 (Shaft Angle) and Row 2 (Trunnion LOS Angle) indications on lines (a) and (b) of the Data Sheet.

4A. Set OPTICS MODE switch to ZERO. After one minute, perform the following DSKY operations:

a. VERB 06 NOUN 55 ENTR

b. Record Row 1 (Shaft Angle) and Row 2 (Trunnion LOS Angle) indications on lines (a) and (b) of the Data Sheet.

5. Place the Variable Deviation Wedge (VDW) in front of target number 1 using the VDW base which allows deviation to be measured in the vertical plane (setting knob points upward). Set VDW dial to zero.

6. Cover the SXT StLOS. Sight through the SXT LLOS and adjust the G & N Mounting Fixture until the horizontal reticle line of the SXT is coincident with the dot and horizontal reticle line of target number 1.

7. Sight through the SXT LLOS and move the VDW laterally until target number 1 reticle is seen clearly. Adjust the VDW dial until the central horizontal reticle line of SXT is coincident with dot and horizontal reticle line of target number 1. Record the VDW reading on line (c). Uncover the SXT StLOS.

NOTE: If the value obtained for line (g) in step 8 is not within tolerance, perform the alternate procedure given in steps 65 through 74 to verify that an out-of-tolerance condition exists.

8. Cover the SXT LLOS. Sight through the SXT StLOS and adjust the VDW dial until the central horizontal reticle line of SXT is coincident with the dot and horizontal reticle line of target number 1. Record the VDW reading on line (e). Complete lines (d), (f), and (g). Uncover SXT LLOS.

DATE 30 JUN 66

JDC 12214 REV L PAGE 3 OF 9
SUBSYSTEM G & N SYSTEM
ASSY

9. Rotate the VDW to the other base (setting knob points right). Set the VDW dial to zero.

NOTE: Step 10 applies to Indicator Control panel 2021290 only. Step 10A applies to all Indicator Control panels except 2021290.

10. Set OPTICS ZERO switch on Indicator Control panel to ZERO. Set OPTICS MODE switch to CMC and perform the following DSKY operations:

a. VERB 41 NOUN 55 ENTR

b. +27000 ENTR

c. +45000 ENTR

Wait until optics stop driving before proceeding.

10A. Set OPTICS MODE switch on Indicator Control panel to CMC and perform the following DSKY operations:

a. VERB 41 NOUN 55 ENTR

b. +27000 ENTR

c. +45000 ENTR

Wait until optics stop driving before proceeding.

11. Cover the SXT StLOS. Sight through the SXT LLOS and move the VDW laterally until the target number 1 reticle is seen clearly. Adjust the VDW dial until the central vertical reticle line of SXT is coincident with dot and vertical reticle line of target number 1. Record the VDW dial reading on line (g.1). Uncover the SXT StLOS.

12. Complete lines (i), (j), and (k) on the Data Sheet.

13. Place the VDW in front of target number 3 and cover target number 1.

14. Set the VDW to the value recorded on line (k).

NOTE: Step 15 applies to Indicator Control panel 2021290 only. Step 15A applies to all Indicator Control panels except 2021290.

15. Set OPTICS MODE switch on Indicator Control panel to MAN and set OPTICS SPEED switch to LO.

15A. Set OPTICS MODE switch on Indicator Control panel to MAN and set OPTICS CONTROLLER SPEED switch to LO.

16. Manipulate the Optics Hand Controller vertically to position the SXT StLOS until the central dot on reticle of target number 3 approaches the vertical crosshair on the SXT reticle. At the instant of coincidence, press the MARK pushbutton.

DATE 30 JUN 66

JDC 12214 REV L PAGE 4 OF 9
SUBSYSTEM G & N SYSTEM
ASSY

NOTE: VERB 06, NOUN 56 shall appear on the CMC DSKY indicating optical CDU and time displays.

17. Record the DSKY Row 2 indication on line (l) of the Data Sheet. Repeat step 16 two more times, recording the DSKY Row 2 indication for each MARK.

18. Observe the three bit counts of line (l) of the Data Sheet. If two of the three counts are equal, record this count in line (m). If all three counts are different, record the count which falls between the smallest and the largest on line (m).

19. Complete lines (n) and (o) of the Data Sheet.

20. Set the VDW to the value recorded on line (o).

21. Manipulate the Optics Hand Controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 approaches the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

22. Record the DSKY Row 2 indication on line (p) of the Data Sheet. Repeat step 21 two more times, recording the DSKY Row 2 indication for each MARK.

23. Observe the three bit counts of line (p). If two of the three counts are equal, record this count on line (q). If all three counts are different, record the count which falls between the smallest and the largest on line (q).

24. Complete lines (r), (s), (t) and (u).

25. Set the VDW to the value recorded on line (u).

26. Manipulate the Optics Hand Controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 is approaching the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

27. Record the DSKY Row 2 indication on line (v). Repeat step 26 two more times, recording the DSKY Row 2 indication for each MARK.

28. Observe the three bit counts of line (v). If two of the three counts are equal, record this count on line (w). If all three counts are different, record the count which falls between the smallest and the largest on line (w).

29. Complete lines (x), (y), (z) and (aa).

30. Set the VDW to the value recorded on line (aa).

31. Manipulate the Optics Hand Controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 is approaching the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

32. Record the DSKY Row 2 indication on line (ab). Repeat step 31 two more times,

DATE 30 JUN 66

recording the DSKY Row 2 indication for each MARK.

33. Observe the three bit counts of line (ab). If two of the three counts are equal, record this count on line (ac). If all three counts are different, record the count which falls between the smallest and the largest on line (ac).

34. Complete lines (ad), (ae), (af) and (ag).

35. Set the VDW to the value recorded on line (ag).

36. Manipulate the Optics Hand Controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 is approaching the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

37. Record the DSKY Row 2 indication on line (ah). Repeat step 36 two more times, recording the DSKY Row 2 indication for each MARK.

38. Observe the three bit counts on line (ah). If two of the three counts are equal, record this count on line (ai). If all three counts are different, record the count which falls between the smallest and the largest on line (ai).

39. Complete lines (aj), (ak), (al) and (am).

40. Set the VDW to the value recorded on line (am).

41. Manipulate the Optics Hand Controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 is approaching the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

42. Record the DSKY Row 2 indication on line (an). Repeat step 41 two more times, recording the DSKY Row 2 indication for each MARK.

43. Observe the three bit counts on line (an). If two of the three counts are equal, record this count on line (ao). If all three counts are different, record the count which falls between the smallest and the largest on line (ao).

44. Complete lines (ap), (aq), (ar) and (as).

45. Set the VDW to the value recorded on line (as).

46. Manipulate the Optics Hand Controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 is approaching the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

47. Record the DSKY Row 2 indication on line (at). Repeat step 46 two more times, recording the DSKY Row 2 indication for each MARK.

48. Observe the three bit counts on line (at). If two of the three counts are equal, record this count on line (au). If all three counts are different, record the count which falls between the smallest and the largest on line (au).

49. Complete lines (av) and (aw).

NOTE: Step 50 applies to Indicator Control panel 2021290 only. Step 50A applies to all Indicator Control panels except 2021290.

50. Set OPTICS ZERO switch on Indicator Control panel to ZERO. After approximately 20 seconds, set OPTICS ZERO switch to OFF.

50A. Set OPTICS MODE switch on Indicator Control panel to ZERO. After approximately 20 seconds, set OPTICS MODE switch to MAN.

NOTE: Step 51 applies to Indicator Control panel 2021290 only. Step 51A applies to all Indicator Control panels except 2021290.

51. Set OPTICS SPEED switch to HI and, using Optics Hand Controller, drive SXT until Shaft TPAC indicates approximately +27000. Return OPTICS SPEED switch to LO and manipulate Optics Hand Controller to fine position and hold SXT so Shaft TPAC indicates +27000.

51A. Set OPTICS CONTROLLER SPEED switch to HI and, using Optics Hand Controller, drive SXT until Shaft TPAC indicates approximately +27000. Return OPTICS CONTROLLER SPEED switch to LO and manipulate Optics Hand Controller to fine position and hold SXT so Shaft TPAC indicates +27000.

52. Insure that the horizontal reticle line of the SCT is coincident with the horizontal reticle line of target number 2 by adjusting the G & N Mounting Fixture cradle.

NOTE: Step 53 applies to Indicator Control panel 2021290 only. Step 53A applies to all Indicator Control panels except 2021290.

53. Set OPTICS ZERO switch on Indicator Control panel to ZERO. After approximately 20 seconds, set OPTICS ZERO switch to OFF. Set OPTICS TEL TRUN switch to 25°. The target number 2 reticle pattern shall appear to intersect the number 0 on the SCT vertical reticle line.

53A. Set OPTICS MODE switch on Indicator Control panel to ZERO. After approximately 20 seconds, set OPTICS MODE switch to MAN. Set OPTICS TELESCOPE TRUNNION switch to 25°. The target number 2 reticle pattern shall appear to intersect the number 0 on the SCT vertical reticle line.

NOTE: Step 54 applies to Indicator Control panel 2021290 only. Step 54A applies to all Indicator Control panels except 2021290.

54. Set OPTICS TEL TRUN switch to 0°. The target number 2 reticle pattern shall appear to intersect the center of the SCT reticle pattern.

54A. Set OPTICS TELESCOPE TRUNNION switch to 0°. The target number 2 reticle pattern shall appear to intersect the center of the SCT reticle pattern.

NOTE: Step 55 applies to Indicator Control panel 2021290 only. Step 55A applies to all Indicator Control panels except 2021290.

55. Set OPTICS TEL TRUN switch to SLAVE TO SXT.

55A. Set OPTICS TELESCOPE TRUNNION switch to SLAVE TO SXT.

NOTE: Step 56 applies to Indicator Control panel 2021290. Step 56A applies to all Indicator Control panels except 2021290.

56. Set OPTICS ZERO switch to ZERO. After approximately 20 seconds, set OPTICS ZERO switch to OFF.

56A. Set OPTICS MODE switch to ZERO. After approximately 20 seconds, set OPTICS MODE switch to MAN.

NOTE: Step 57 applies to Indicator Control panel 2021290 only. Step 57A applies to all Indicator Control panels except 2021290.

57. Set OPTICS SPEED switch to HI and, using Optics Hand Controller, drive SXT until Shaft TPAC indicates approximately +27000. Set OPTICS SPEED switch to LO and manipulate Optics Hand Controller to fine position and hold SXT so that Shaft TPAC indicates +27000.

57A. Set OPTICS CONTROLLER SPEED switch to HI and, using Optics Hand Controller, drive SXT until Shaft TPAC indicates approximately +27000. Set OPTICS CONTROLLER SPEED switch to LO and manipulate Optics Hand Controller to fine position and hold SXT so that Shaft TPAC indicates +27000.

58. Insure the horizontal reticle line of the SCT is coincident with horizontal reticle line of target number 2 by adjusting the G & N Mounting Fixture cradle.

59. Sight through the SXT StLOS and, using the Optics Hand Controller, position the approximate center of the SXT StLOS reticle pattern to the number 10 resolution pattern of target number 1.

---

60. Sight through StLOS and LLOS and observe the number 10 and surrounding lines of target number 1 reticle. The number 10 and surrounding lines shall be clear and distinct. Record indication.

61. Position the SCT resolution card approximately 10 feet from the SCT trunnion axis.

62. Sight through the SCT LOS and, using the Optics Hand Controller, position the approximate center of the SCT LOS reticle pattern to the 3 min. resolution pattern of the resolution card.

63. Sight through the SCT and observe the number and surrounding lines on the resolution card. The number and surrounding lines shall be clear and distinct. Record indication.

NOTE: Step 64 applies to Indicator Control panel 2021290 only. Step 64A applies to all Indicator Control panels except 2021290.

64. Set OPTICS ZERO switch on Indicator Control panel to ZERO. After approximately 20 seconds, set OPTICS ZERO switch to OFF. Press OPTICS POWER ON pushbutton on Test Control panel. OPTICS POWER ON pushbutton shall go out.

64A. Set OPTICS MODE switch on Indicator Control panel to ZERO. After approximately 20 seconds, set OPTICS MODE switch to MAN. Press OPTICS POWER ON pushbutton on Test Control panel. OPTICS POWER ON pushbutton shall go out.

ALTERNATE SXT LOS PARALLELISM PROCEDURE

65. Place the theodolite in a line coincident with the SXT LLOS and cover the SXT StLOS.

66. Level theodolite base to the plate spirit level and level the altitude spirit level. Adjust the telescope focus to infinity. Set telescope to approximately 90°. Install the portable light assembly and adapter in the SXT eyepiece assembly. While observing the theodolite image, adjust the G & N Mounting Fixture until the SXT reticle is superimposed on the theodolite horizontal filar.

67. Align the theodolite horizontal filar to the SXT reticle and record the vertical angle.

68. Reverse and plunge the theodolite telescope and repeat step 67.

69. Repeat steps 67 and 68 for seven additional pairs of readings. After each time that step 68 is completed, drive the theodolite elevation off prior to realigning to the SXT reticle.

70. Place the theodolite in a line coincident with the SXT StLOS and cover the SXT LLOS.

JOB OPTICS POSITIONAL ACCURACY TEST | JDC 12214 REV L PAGE 9 OF 9

SUBSYSTEM G & N SYSTEM | ASSY

71. Repeat step 66.
72. Repeat steps 67, 68, and 69.
73. Complete calculations for SXT StLOS to LLOS parallelism error.
74. Continue normal test sequence at step 9.

JDC 19128

IMPORTANT See below.

INTERVAL

TOOLS AND MATERIAL Variable Deviation Wedge
SCT Resolution Card

IMPORTANT: 1. Insure that JDC 19128 has been performed within the last six months.

2. Avoid repeated slewing of SXT shaft and trunnion axes into their mechanical stops.

NOTE: 1. The G & N Mounting Fixture shall be set at the 0.0° position.

2. Step 1 applies to Indicator Control panel 2021290 only. Step 1A applies to all Indicator Control panels except 2021290.

1. Press OPTICS POWER ON pushbutton on Test Control panel. OPTICS POWER ON pushbutton shall light. Insure that OPTICS TEL TRUN switch on Indicator Control panel is set to SLAVE TO SXT and the OPTICS ZERO switch is set to OFF.

1A. Press OPTICS POWER ON pushbutton on Test Control panel. OPTICS POWER ON pushbutton shall light. Insure that OPTICS TELESCOPE TRUNNION switch on Indicator Control panel is set to SLAVE TO SXT and that OPTICS TRACKER switch is set to OFF.

VERIFICATION WITH SIDL REQUIRED BEFORE USE

DATE 30 JUN 66

JOB OPTICS POSITIONAL ACCURACY TEST

JDC 12214 **REV** M **PAGE** 2 **OF** 9

SUBSYSTEM G & N SYSTEM
ASSY

NOTE: Step 2 applies to Indicator Control panel 2021290 only. Step 2A applies to all Indicator Control panels except 2021290.

2. Set OPTICS COUPLING switch to DIRECT and set OPTICS SPEED switch to HI.

2A. Set OPTICS CONTROLLER COUPLING switch to DIRECT and set OPTICS CONTROLLER SPEED switch to HI.

3. Place OPTICS MODE switch on the Indicator Control Panel to MAN.

NOTE: Step 4 applies to Indicator Control panel 2021290 only. Step 4A applies to all Indicator Control panels except 2021290.

4. Set OPTICS ZERO switch to ZERO. After one minute, perform the following DSKY operations:

a. VERB 06 NOUN 55 ENTR

b. Record Row 1 (Shaft Angle) and Row 2 (Trunnion LOS Angle) indications on lines (a) and (b) of the Data Sheet.

4A. Set OPTICS MODE switch to ZERO. After one minute, perform the following DSKY operations:

a. VERB 06 NOUN 55 ENTR

b. Record Row 1 (Shaft Angle) and Row 2 (Trunnion LOS Angle) indications on lines (a) and (b) of the Data Sheet.

5. Place the Variable Deviation Wedge (VDW) in front of target number 1 using the VDW base which allows deviation to be measured in the vertical plane (setting knob points upward). Set VDW dial to zero.

6. Cover the SXT StLOS. Sight through the SXT LLOS and adjust the G & N Mounting Fixture until the horizontal reticle line of the SXT is coincident with the dot and horizontal reticle line of target number 1.

7. Sight through the SXT LLOS and move the VDW laterally until target number 1 reticle is seen clearly. Adjust the VDW dial until the central horizontal reticle line of SXT is coincident with dot and horizontal reticle line of target number 1. Record the VDW reading on line (c). Uncover the SXT StLOS.

NOTE: If the value obtained for line (g) in step 8 is not within tolerance, perform the alternate procedure given in steps 65 through 74 to verify that an out-of-tolerance condition exists.

8. Cover the SXT LLOS. Sight through the SXT StLOS and adjust the VDW dial until the central horizontal reticle line of SXT is coincident with the dot and horizontal reticle line of target number 1. Record the VDW reading on line (e). Complete lines (d), (f), and (g). Uncover SXT LLOS.

DATE 30 JUN 66

JOB OPTICS POSITIONAL ACCURACY TEST

JDC 12214 **REV** M **PAGE** 3 **OF** 9

SUBSYSTEM G & N SYSTEM
ASSY

9. Rotate the VDW to the other base (setting knob points right). Set the VDW dial to zero.

NOTE: Step 10 applies to Indicator Control panel 2021290 only. Step 10A applies to all Indicator Control panels except 2021290.

10. Set OPTICS ZERO switch on Indicator Control panel to OFF. Set OPTICS MODE switch to CMC and perform the following DSKY operations:

a. VERB 41 NOUN 55 ENTR
b. +27000 ENTR
c. +45000 ENTR

Wait until optics stop driving before proceeding.

10A. Set OPTICS MODE switch on Indicator Control panel to CMC and perform the following DSKY operations:

a. VERB 41 NOUN 55 ENTR
b. +27000 ENTR
c. +45000 ENTR

Wait until optics stop driving before proceeding.

11. Cover the SXT StLOS. Sight through the SXT LLOS and move the VDW laterally until the target number 1 reticle is seen clearly. Adjust the VDW dial until the central vertical reticle line of SXT is coincident with dot and vertical reticle line of target number 1. Record the VDW dial reading on line (g.1). Uncover the SXT StLOS.

12. Complete lines (i), (j), and (k) on the Data Sheet.

13. Place the VDW in front of target number 3 and cover target number 1.

14. Set the VDW to the value recorded on line (k).

NOTE: Step 15 applies to Indicator Control panel 2021290 only. Step 15A applies to all Indicator Control panels except 2021290.

15. Set OPTICS MODE switch on Indicator Control panel to MAN and set OPTICS SPEED switch to LO.

15A. Set OPTICS MODE switch on Indicator Control panel to MAN and set OPTICS CONTROLLER SPEED switch to LO.

16. Manipulate the Optics Hand Controller vertically to position the SXT StLOS until the central dot on reticle of target number 3 approaches the vertical crosshair on the SXT reticle. At the instant of coincidence, press the MARK pushbutton.

DATE 30 JUN 66

JOB OPTICS POSITIONAL ACCURACY TEST

JDC 12214 **REV** M **PAGE** 4 **OF** 9

SUBSYSTEM G & N SYSTEM
ASSY

NOTE: VERB 06, NOUN 56 shall appear on the CMC DSKY indicating optical CDU and time displays.

17. Record the DSKY Row 2 indication on line (l) of the Data Sheet. Repeat step 16 two more times, recording the DSKY Row 2 indication for each MARK.

18. Observe the three bit counts of line (l) of the Data Sheet. If two of the three counts are equal, record this count in line (m). If all three counts are different, record the count which falls between the smallest and the largest on line (m).

19. Complete lines (n) and (o) of the Data Sheet.

20. Set the VDW to the value recorded on line (o).

21. Manipulate the Optics Hand Controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 approaches the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

22. Record the DSKY Row 2 indication on line (p) of the Data Sheet. Repeat step 21 two more times, recording the DSKY Row 2 indication for each MARK.

23. Observe the three bit counts of line (p). If two of the three counts are equal, record this count on line (q). If all three counts are different, record the count which falls between the smallest and the largest on line (q).

24. Complete lines (r), (s), (t) and (u).

25. Set the VDW to the value recorded on line (u).

26. Manipulate the Optics Hand Controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 is approaching the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

27. Record the DSKY Row 2 indication on line (v). Repeat step 26 two more times, recording the DSKY Row 2 indication for each MARK.

28. Observe the three bit counts of line (v). If two of the three counts are equal, record this count on line (w). If all three counts are different, record the count which falls between the smallest and the largest on line (w).

29. Complete lines (x), (y), (z) and (aa).

30. Set the VDW to the value recorded on line (aa).

31. Manipulate the Optics Hand Controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 is approaching the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

32. Record the DSKY Row 2 indication on line (ab). Repeat step 31 two more times,

DATE 30 JUN 66

recording the DSKY Row 2 indication for each MARK.

33. Observe the three bit counts of line (ab). If two of the three counts are equal, record this count on line (ac). If all three counts are different, record the count which falls between the smallest and the largest on line (ac).

34. Complete lines (ad), (ae), (af) and (ag).

35. Set the VDW to the value recorded on line (ag).

36. Manipulate the Optics Hand Controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 is approaching the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

37. Record the DSKY Row 2 indication on line (ah). Repeat step 36 two more times, recording the DSKY Row 2 indication for each MARK.

38. Observe the three bit counts on line (ah). If two of the three counts are equal, record this count on line (ai). If all three counts are different, record the count which falls between the smallest and the largest on line (ai).

39. Complete lines (aj), (ak), (al) and (am).

40. Set the VDW to the value recorded on line (am).

41. Manipulate the Optics Hand Controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 is approaching the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

42. Record the DSKY Row 2 indication on line (an). Repeat step 41 two more times, recording the DSKY Row 2 indication for each MARK.

43. Observe the three bit counts on line (an). If two of the three counts are equal, record this count on line (ao). If all three counts are different, record the count which falls between the smallest and the largest on line (ao).

44. Complete lines (ap), (aq), (ar) and (as).

45. Set the VDW to the value recorded on line (as).

46. Manipulate the Optics Hand Controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 is approaching the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

47. Record the DSKY Row 2 indication on line (at). Repeat step 46 two more times, recording the DSKY Row 2 indication for each MARK.

48. Observe the three bit counts on line (at). If two of the three counts are equal, record this count on line (au). If all three counts are different, record the count which falls between the smallest and the largest on line (au).

49. Complete lines (av) and (aw).

NOTE: Step 50 applies to Indicator Control panel 2021290 only. Step 50A applies to all Indicator Control panels except 2021290.

50. Set OPTICS ZERO switch on Indicator Control panel to ZERO. After approximately 20 seconds, set OPTICS ZERO switch to OFF.

50A. Set OPTICS MODE switch on Indicator Control panel to ZERO. After approximately 20 seconds, set OPTICS MODE switch to MAN.

NOTE: Step 51 applies to Indicator Control panel 2021290 only. Step 51A applies to all Indicator Control panels except 2021290.

51. Set OPTICS SPEED switch to HI and, using Optics Hand Controller, drive SXT until Shaft TPAC indicates approximately +27000. Return OPTICS SPEED switch to LO and manipulate Optics Hand Controller to fine position and hold SXT so Shaft TPAC indicates +27000.

51A. Set OPTICS CONTROLLER SPEED switch to HI and, using Optics Hand Controller, drive SXT until Shaft TPAC indicates approximately +27000. Return OPTICS CONTROLLER SPEED switch to LO and manipulate Optics Hand Controller to fine position and hold SXT so Shaft TPAC indicates +27000.

52. Insure that the horizontal reticle line of the SCT is coincident with the horizontal reticle line of target number 2 by adjusting the G & N Mounting Fixture cradle.

NOTE: Step 53 applies to Indicator Control panel 2021290 only. Step 53A applies to all Indicator Control panels except 2021290.

53. Set OPTICS ZERO switch on Indicator Control panel to ZERO. After approximately 20 seconds, set OPTICS ZERO switch to OFF. Set OPTICS TEL TRUN switch to 25°. The target number 2 reticle pattern shall appear to intersect the number 0 on the SCT vertical reticle line.

53A. Set OPTICS MODE switch on Indicator Control panel to ZERO. After approximately 20 seconds, set OPTICS MODE switch to MAN. Set OPTICS TELESCOPE TRUNNION switch to 25°. The target number 2 reticle pattern shall appear to intersect the number 0 on the SCT vertical reticle line.

NOTE: Step 54 applies to Indicator Control panel 2021290 only. Step 54A applies to all Indicator Control panels except 2021290.

54. Set OPTICS TEL TRUN switch to 0°. The target number 2 reticle pattern shall appear to intersect the center of the SCT reticle pattern.

54A. Set OPTICS TELESCOPE TRUNNION switch to 0°. The target number 2 reticle pattern shall appear to intersect the center of the SCT reticle pattern.

NOTE: Step 55 applies to Indicator Control panel 2021290 only. Step 55A applies to all Indicator Control panels except 2021290.

55. Set OPTICS TEL TRUN switch to SLAVE TO SXT.

55A. Set OPTICS TELESCOPE TRUNNION switch to SLAVE TO SXT.

NOTE: Step 56 applies to Indicator Control panel 2021290. Step 56A applies to all Indicator Control panels except 2021290.

56. Set OPTICS ZERO switch to ZERO. After approximately 20 seconds, set OPTICS ZERO switch to OFF.

56A. Set OPTICS MODE switch to ZERO. After approximately 20 seconds, set OPTICS MODE switch to MAN.

NOTE: Step 57 applies to Indicator Control panel 2021290 only. Step 57A applies to all Indicator Control panels except 2021290.

57. Set OPTICS SPEED switch to HI and, using Optics Hand Controller, drive SXT until Shaft TPAC indicates approximately +27000. Set OPTICS SPEED switch to LO and manipulate Optics Hand Controller to fine position and hold SXT so that Shaft TPAC indicates +27000.

57A. Set OPTICS CONTROLLER SPEED switch to HI and, using Optics Hand Controller, drive SXT until Shaft TPAC indicates approximately +27000. Set OPTICS CONTROLLER SPEED switch to LO and manipulate Optics Hand Controller to fine position and hold SXT so that Shaft TPAC indicates +27000.

58. Insure the horizontal reticle line of the SCT is coincident with horizontal reticle line of target number 2 by adjusting the G & N Mounting Fixture cradle.

59. Sight through the SXT StLOS and, using the Optics Hand Controller, position the approximate center of the SXT StLOS reticle pattern to the number 10 resolution pattern of target number 1.

---

60. Sight through StLOS and LLOS and observe the number 10 and surrounding lines of target number 1 reticle. The number 10 and surrounding lines shall be clear and distinct. Record indication.

61. Position the SCT resolution card approximately 10 feet from the SCT trunnion axis.

62. Sight through the SCT LOS and, using the Optics Hand Controller, position the approximate center of the SCT LOS reticle pattern to the 3 min. resolution pattern of the resolution card.

63. Sight through the SCT and observe the number and surrounding lines on the resolution card. The number and surrounding lines shall be clear and distinct. Record indication.

NOTE: Step 64 applies to Indicator Control panel 2021290 only. Step 64A applies to all Indicator Control panels except 2021290.

64. Set OPTICS ZERO switch on Indicator Control panel to ZERO. After approximately 20 seconds, set OPTICS ZERO switch to OFF. Press OPTICS POWER ON pushbutton on Test Control panel. OPTICS POWER ON pushbutton shall go out.

64A. Set OPTICS MODE switch on Indicator Control panel to ZERO. After approximately 20 seconds, set OPTICS MODE switch to MAN. Press OPTICS POWER ON pushbutton on Test Control panel. OPTICS POWER ON pushbutton shall go out.

ALTERNATE SXT LOS PARALLELISM PROCEDURE

65. Place the theodolite in a line coincident with the SXT LLOS and cover the SXT StLOS.

66. Level theodolite base to the plate spirit level and level the altitude spirit level. Adjust the telescope focus to infinity. Set telescope to approximately 90°. Install the portable light assembly and adapter in the SXT eyepiece assembly. While observing the theodolite image, adjust the G & N Mounting Fixture until the SXT reticle is superimposed on the theodolite horizontal filar.

67. Align the theodolite horizontal filar to the SXT reticle and record the vertical angle.

68. Reverse and plunge the theodolite telescope and repeat step 67.

69. Repeat steps 67 and 68 for seven additional pairs of readings. After each time that step 68 is completed, drive the theodolite elevation off prior to realigning to the SXT reticle.

70. Place the theodolite in a line coincident with the SXT StLOS and cover the SXT LLOS.

JOB OPTICS POSITIONAL ACCURACY TEST | JDC 12214 REV M PAGE 9 OF 9

SUBSYSTEM G & N SYSTEM | ASSY

71. Repeat step 66.
72. Repeat steps 67, 68, and 69.
73. Complete calculations for SXT StLOS to LLOS parallelism error.
74. Continue normal test sequence at step 9.

REFERENCES PS 2015000
JDC 19128

IMPORTANT See below.

INTERVAL

TOOLS AND MATERIAL Variable Deviation Wedge
SCT Resolution Card

IMPORTANT: 1. Insure that JDC 19128 has been performed within the last six months.

2. Avoid repeated slewing of SXT shaft and trunnion axes into their mechanical stops.

3. If a Fresh Start (VERB 36 ENTR) is performed at any time during performance of this JDC, set OPTICS ZERO switch (Indicator Control panel 2021290) to OFF and then to ON and wait 18 seconds before proceeding; or set OPTICS MODE switch (all Indicator Control panels except 2021290) to MAN and then to ZERO and wait 18 seconds before proceeding.

NOTE: 1. The G & N Mounting Fixture shall be set at the 0.0° position.

2. Step 1 applies to Indicator Control panel 2021290 only. Step 1A applies to all Indicator Control panels except 2021290.

1. Press OPTICS POWER ON pushbutton on Test Control panel. OPTICS POWER ON pushbutton shall light. Insure that OPTICS TEL TRUN switch on Indicator Control panel is set to SLAVE TO SXT and the OPTICS ZERO switch is set to OFF.

1A. Press OPTICS POWER ON pushbutton on Test Control panel. OPTICS POWER ON pushbutton shall light. Insure that OPTICS TELESCOPE TRUNNION switch on Indicator Control panel is set to SLAVE TO SXT and that OPTICS TRACKER switch is set to OFF.

VERIFICATION WITH SIDL REQUIRED BEFORE USE

NOTE: Step 2 applies to Indicator Control panel 2021290 only. Step 2A applies to all Indicator Control panels except 2021290.

2. Set OPTICS COUPLING switch to DIRECT and set OPTICS SPEED switch to HI.

2A. Set OPTICS CONTROLLER COUPLING switch to DIRECT and set OPTICS CONTROLLER SPEED switch to HI.

3. Place OPTICS MODE switch on the Indicator Control Panel to MAN.

NOTE: Step 4 applies to Indicator Control panel 2021290 only. Step 4A applies to all Indicator Control panels except 2021290.

4. Set OPTICS ZERO switch to ZERO. After one minute, perform the following DSKY operations:

a. VERB 06 NOUN 55 ENTR
b. Record Row 1 (Shaft Angle) and Row 2 (Trunnion LOS Angle) indications on lines (a) and (b) of the Data Sheet.

4A. Set OPTICS MODE switch to ZERO. After one minute, perform the following DSKY operations:

a. VERB 06 NOUN 55 ENTR
b. Record Row 1 (Shaft Angle) and Row 2 (Trunnion LOS Angle) indications on lines (a) and (b) of the Data Sheet.

5. Place the Variable Deviation Wedge (VDW) in front of target number 1 using the VDW base which allows deviation to be measured in the vertical plane (setting knob points upward). Set VDW dial to zero.

6. Cover the SXT StLOS. Sight through the SXT LLOS and adjust the G & N Mounting Fixture until the horizontal reticle line of the SXT is coincident with the dot and horizontal reticle line of target number 1.

7. Sight through the SXT LLOS and move the VDW laterally until target number 1 reticle is seen clearly. Adjust the VDW dial until the central horizontal reticle line of SXT is coincident with dot and horizontal reticle line of target number 1. Record the VDW reading on line (c). Uncover the SXT StLOS.

NOTE: If the value obtained for line (g) in step 8 is not within tolerance, perform the alternate procedure given in steps 65 through 74 to verify that an out-of-tolerance condition exists.

8. Cover the SXT LLOS. Sight through the SXT StLOS and adjust the VDW dial until the central horizontal reticle line of SXT is coincident with the dot and horizontal reticle line of target number 1. Record the VDW reading on line (e). Complete lines (d), (f), and (g). Uncover SXT LLOS.

---

9. Rotate the VDW to the other base (setting knob points right). Set the VDW dial to zero.

NOTE: Step 10 applies to Indicator Control panel 2021290 only. Step 10A applies to all Indicator Control panels except 2021290.

10. Set OPTICS ZERO switch on Indicator Control panel to OFF. Set OPTICS MODE switch to CMC and perform the following DSKY operations:

a. VERB 41 NOUN 55 ENTR
b. +27000 ENTR
c. +45000 ENTR

Wait until optics stop driving before proceeding.

10A. Set OPTICS MODE switch on Indicator Control panel to CGC and perform the following DSKY operations:

a. VERB 41 NOUN 55 ENTR
b. +27000 ENTR
c. +45000 ENTR

Wait until optics stop driving before proceeding.

11. Cover the SXT StLOS. Sight through the SXT LLOS and move the VDW laterally until the target number 1 reticle is seen clearly. Adjust the VDW dial until the central vertical reticle line of SXT is coincident with dot and vertical reticle line of target number 1. Record the VDW dial reading on line (g.1). Complete line (g.2). Uncover the SXT StLOS.

12. Complete lines (h), (i), (j), and (k) on the Data Sheet.

13. Place the VDW in front of target number 3 and cover target number 1.

14. Set the VDW to the value recorded on line (k).

NOTE: Step 15 applies to Indicator Control panel 2021290 only. Step 15A applies to all Indicator Control panels except 2021290.

15. Set OPTICS MODE switch on Indicator Control panel to MAN and set OPTICS SPEED switch to LO.

15A. Set OPTICS MODE switch on Indicator Control panel to MAN and set OPTICS CONTROLLER SPEED switch to LO.

16. Manipulate the Optics Hand Controller vertically to position the SXT StLOS until the central dot on reticle of target number 3 approaches the vertical crosshair on the SXT reticle. At the instant of coincidence, press the MARK pushbutton.

NOTE: VERB 06, NOUN 56 shall appear on the CMC DSKY indicating optical CDU and time displays.

17. Record the DSKY Row 2 indication on line (l) of the Data Sheet. Repeat step 16 two more times, recording the DSKY Row 2 indication for each MARK.

18. Observe the three bit counts of line (l) of the Data Sheet. If two of the three counts are equal, record this count in line (m). If all three counts are different, record the count which falls between the smallest and the largest on line (m).

19. Complete lines (n) and (o) of the Data Sheet.

20. Set the VDW to the value recorded on line (o).

21. Manipulate the Optics Hand Controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 approaches the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

22. Record the DSKY Row 2 indication on line (p) of the Data Sheet. Repeat step 21 two more times, recording the DSKY Row 2 indication for each MARK.

23. Observe the three bit counts of line (p). If two of the three counts are equal, record this count on line (q). If all three counts are different, record the count which falls between the smallest and the largest on line (q).

24. Complete lines (r), (s), (t) and (u).

25. Set the VDW to the value recorded on line (u).

26. Manipulate the Optics Hand Controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 is approaching the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

27. Record the DSKY Row 2 indication on line (v). Repeat step 26 two more times, recording the DSKY Row 2 indication for each MARK.

28. Observe the three bit counts of line (v). If two of the three counts are equal, record this count on line (w). If all three counts are different, record the count which falls between the smallest and the largest on line (w).

29. Complete lines (x), (y), (z) and (aa).

30. Set the VDW to the value recorded on line (aa).

31. Manipulate the Optics Hand Controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 is approaching the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

32. Record the DSKY Row 2 indication on line (ab). Repeat step 31 two more times,

recording the DSKY Row 2 indication for each MARK.

33. Observe the three bit counts of line (ab). If two of the three counts are equal, record this count on line (ac). If all three counts are different, record the count which falls between the smallest and the largest on line (ac).

34. Complete lines (ad), (ae), (af) and (ag).

35. Set the VDW to the value recorded on line (ag).

36. Manipulate the Optics Hand Controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 is approaching the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

37. Record the DSKY Row 2 indication on line (ah). Repeat step 36 two more times, recording the DSKY Row 2 indication for each MARK.

38. Observe the three bit counts on line (ah). If two of the three counts are equal, record this count on line (ai). If all three counts are different, record the count which falls between the smallest and the largest on line (ai).

39. Complete lines (aj), (ak), (al) and (am).

40. Set the VDW to the value recorded on line (am).

41. Manipulate the Optics Hand Controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 is approaching the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

42. Record the DSKY Row 2 indication on line (an). Repeat step 41 two more times, recording the DSKY Row 2 indication for each MARK.

43. Observe the three bit counts on line (an). If two of the three counts are equal, record this count on line (ao). If all three counts are different, record the count which falls between the smallest and the largest on line (ao).

44. Complete lines (ap), (aq), (ar) and (as).

45. Set the VDW to the value recorded on line (as).

46. Manipulate the Optics Hand Controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 is approaching the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

47. Record the DSKY Row 2 indication on line (at). Repeat step 46 two more times, recording the DSKY Row 2 indication for each MARK.

48. Observe the three bit counts on line (at). If two of the three counts are equal, record this count on line (au). If all three counts are different, record the count which falls between the smallest and the largest on line (au).

49. Complete lines (av) and (aw).

NOTE: Step 50 applies to Indicator Control panel 2021290 only. Step 50A applies to all Indicator Control panels except 2021290.

50. Set OPTICS ZERO switch on Indicator Control panel to ZERO. After approximately 20 seconds, set OPTICS ZERO switch to OFF.

50A. Set OPTICS MODE switch on Indicator Control panel to ZERO. After approximately 20 seconds, set OPTICS MODE switch to MAN.

NOTE: Step 51 applies to Indicator Control panel 2021290 only. Step 51A applies to all Indicator Control panels except 2021290.

51. Set OPTICS SPEED switch to HI and, using Optics Hand Controller, drive SXT until Shaft TPAC indicates approximately +27000. Return OPTICS SPEED switch to LO and manipulate Optics Hand Controller to fine position and hold SXT so Shaft TPAC indicates +27000.

51A. Set OPTICS CONTROLLER SPEED switch to HI and, using Optics Hand Controller, drive SXT until Shaft TPAC indicates approximately +27000. Return OPTICS CONTROLLER SPEED switch to LO and manipulate Optics Hand Controller to fine position and hold SXT so Shaft TPAC indicates +27000.

52. Insure that the horizontal reticle line of the SCT is coincident with the horizontal reticle line of target number 2 by adjusting the G & N Mounting Fixture cradle.

NOTE: Step 53 applies to Indicator Control panel 2021290 only. Step 53A applies to all Indicator Control panels except 2021290.

53. Set OPTICS ZERO switch on Indicator Control panel to ZERO. After approximately 20 seconds, set OPTICS ZERO switch to OFF. Set OPTICS TEL TRUN switch to 25°. The target number 2 reticle pattern shall appear to intersect the number 0 on the SCT vertical reticle line.

53A. Set OPTICS MODE switch on Indicator Control panel to ZERO. After approximately 20 seconds, set OPTICS MODE switch to MAN. Set OPTICS TELESCOPE TRUNNION switch to 25°. The target number 2 reticle pattern shall appear to intersect the number 0 on the SCT vertical reticle line.

NOTE: Step 54 applies to Indicator Control panel 2021290 only. Step 54A applies to all Indicator Control panels except 2021290.

54. Set OPTICS TEL TRUN switch to 0°. The target number 2 reticle pattern shall appear to intersect the center of the SCT reticle pattern.

54A. Set OPTICS TELESCOPE TRUNNION switch to 0°. The target number 2 reticle pattern shall appear to intersect the center of the SCT reticle pattern.

NOTE: Step 55 applies to Indicator Control panel 2021290 only. Step 55A applies to all Indicator Control panels except 2021290.

55. Set OPTICS TEL TRUN switch to SLAVE TO SXT.

55A. Set OPTICS TELESCOPE TRUNNION switch to SLAVE TO SXT.

NOTE: Step 56 applies to Indicator Control panel 2021290. Step 56A applies to all Indicator Control panels except 2021290.

56. Set OPTICS ZERO switch to ZERO. After approximately 20 seconds, set OPTICS ZERO switch to OFF.

56A. Set OPTICS MODE switch to ZERO. After approximately 20 seconds, set OPTICS MODE switch to MAN.

NOTE: Step 57 applies to Indicator Control panel 2021290 only. Step 57A applies to all Indicator Control panels except 2021290.

57. Set OPTICS SPEED switch to HI and, using Optics Hand Controller, drive SXT until Shaft TPAC indicates approximately +27000. Set OPTICS SPEED switch to LO and manipulate Optics Hand Controller to fine position and hold SXT so that Shaft TPAC indicates +27000.

57A. Set OPTICS CONTROLLER SPEED switch to HI and, using Optics Hand Controller, drive SXT until Shaft TPAC indicates approximately +27000. Set OPTICS CONTROLLER SPEED switch to LO and manipulate Optics Hand Controller to fine position and hold SXT so that Shaft TPAC indicates +27000.

58. Insure the horizontal reticle line of the SCT is coincident with horizontal reticle line of target number 2 by adjusting the G & N Mounting Fixture cradle.

59. Sight through the SXT StLOS and, using the Optics Hand Controller, position the approximate center of the SXT StLOS reticle pattern to the number 10 resolution pattern of target number 1.

---

60. Sight through StLOS and LLOS and observe the number 10 and surrounding lines of target number 1 reticle. The number 10 and surrounding lines shall be clear and distinct. Record indication.

61. Position the SCT resolution card approximately 10 feet from the SCT trunnion axis.

62. Sight through the SCT LOS and, using the Optics Hand Controller, position the approximate center of the SCT LOS reticle pattern to the 3 min. resolution pattern of the resolution card.

63. Sight through the SCT and observe the number and surrounding lines on the resolution card. The number and surrounding lines shall be clear and distinct. Record indication.

NOTE: Step 64 applies to Indicator Control panel 2021290 only. Step 64A applies to all Indicator Control panels except 2021290.

64. Set OPTICS ZERO switch on Indicator Control panel to ZERO. After approximately 20 seconds, set OPTICS ZERO switch to OFF. Press OPTICS POWER ON pushbutton on Test Control panel. OPTICS POWER ON pushbutton shall go out.

64A. Set OPTICS MODE switch on Indicator Control panel to ZERO. After approximately 20 seconds, set OPTICS MODE switch to MAN. Press OPTICS POWER ON pushbutton on Test Control panel. OPTICS POWER ON pushbutton shall go out.

ALTERNATE SXT LOS PARALLELISM PROCEDURE

65. Place the theodolite in a line coincident with the SXT LLOS and cover the SXT StLOS.

66. Level theodolite base to the plate spirit level and level the altitude spirit level. Adjust the telescope focus to infinity. Set telescope to approximately 90 . Install the portable light assembly and adapter in the SXT eyepiece assembly. While observing the theodolite image, adjust the G & N Mounting Fixture until the SXT reticle is superimposed on the theodolite horizontal filar.

67. Align the theodolite horizontal filar to the SXT reticle and record the vertical angle.

68. Reverse and plunge the theodolite telescope and repeat step 67.

69. Repeat steps 67 and 68 for seven additional pairs of readings. After each time that step 68 is completed, drive the theodolite elevation off prior to realigning to the SXT reticle.

70. Place the theodolite in a line coincident with the SXT StLOS and cover the SXT LLOS.

JOB OPTICS POSITIONAL ACCURACY TEST | **JDC** 12214 **REV** N **PAGE** 9 **OF** 9

SUBSYSTEM G & N SYSTEM | **ASSY**

71. Repeat step 66.
72. Repeat steps 67, 68, and 69.
73. Complete calculations for SXT StLOS to LLOS parallelism error.
74. Continue normal test sequence at step 9.

REFERENCES PS 2015000
JDC 19128

IMPORTANT See below.

INTERVAL

TOOLS AND MATERIAL Variable Deviation Wedge
SCT Resolution Card

IMPORTANT: 1. Insure that JDC 19128 has been performed within the last six months.

2. Avoid slewing of SXT shaft and trunnion axes into their mechanical stops.

3. If a Fresh Start (VERB 36 ENTR) is performed at any time during performance of this JDC, set OPTICS ZERO switch (Indicator Control panel 2021290) to OFF and then to ON and wait 18 seconds before proceeding; or set OPTICS MODE switch (all Indicator Control panels except 2021290) to MAN and then to ZERO and wait 18 seconds before proceeding.

NOTE: 1. The G & N Mounting Fixture shall be set at the 0.0° position.

2. Step 1 applies to Indicator Control panel 2021290 only. Step 1A applies to all Indicator Control panels except 2021290.

1. Press OPTICS POWER ON pushbutton on Test Control panel. OPTICS POWER ON pushbutton shall light. Insure that OPTICS TEL TRUN switch on Indicator Control panel is set to SLAVE TO SXT and the OPTICS ZERO switch is set to OFF.

1A. Press OPTICS POWER ON pushbutton on Test Control panel. OPTICS POWER ON pushbutton shall light. Insure that OPTICS TELESCOPE TRUNNION switch on Indicator Control panel is set to SLAVE TO SXT and that OPTICS TRACKER switch is set to OFF.

VERIFICATION WITH SIDL REQUIRED BEFORE USE

NOTE: Step 2 applies to Indicator Control panel 2021290 only. Step 2A applies to all Indicator Control panels except 2021290.

2. Set OPTICS COUPLING switch to DIRECT and set OPTICS SPEED switch to HI.

2A. Set OPTICS CONTROLLER COUPLING switch to DIRECT and set OPTICS CONTROLLER SPEED switch to HI.

3. Place OPTICS MODE switch on the Indicator Control Panel to MAN.

3A. Using Optics Hand Controller, position the SXT Trunnion between 0° and 10° as indicated by the Trunnion TPAC.

NOTE: Step 4 applies to Indicator Control panel 2021290 only. Step 4A applies to all Indicator Control panels except 2021290.

4. Set OPTICS ZERO switch to ZERO. After one minute, perform the following DSKY operations:

a. VERB 06 NOUN 55 ENTR
b. Record Row 1 (Shaft Angle) and Row 2 (Trunnion LOS Angle) indications on lines (a) and (b) of the Data Sheet.

4A. Set OPTICS MODE switch to ZERO. After one minute, perform the following DSKY operations:

a. VERB 06 NOUN 55 ENTR
b. Record Row 1 (Shaft Angle) and Row 2 (Trunnion LOS Angle) indications on lines (a) and (b) of the Data Sheet.

5. Place the Variable Deviation Wedge (VDW) in front of target number 1 using the VDW base which allows deviation to be measured in the vertical plane (setting knob points upward). Set VDW dial to zero.

6. Cover the SXT StLOS. Sight through the SXT LLOS and adjust the G & N Mounting Fixture until the horizontal reticle line of the SXT is coincident with the dot and horizontal reticle line of target number 1.

7. Sight through the SXT LLOS and move the VDW laterally until target number 1 reticle is seen clearly. Adjust the VDW dial until the central horizontal reticle line of SXT is coincident with dot and horizontal reticle line of target number 1. Record the VDW reading on line (c). Uncover the SXT StLOS.

NOTE: If the value obtained for line (g) in step 8 is not within tolerance, perform the alternate procedure given in steps 65 through 74 to verify that an out-of-tolerance condition exists.

8. Cover the SXT LLOS. Sight through the SXT StLOS and adjust the VDW dial until the central horizontal reticle line of SXT is coincident with the dot and horizontal reticle line of target number 1. Record the VDW reading on line (e). Complete lines (d), (f), and (g). Uncover SXT LLOS.

---

9. Rotate the VDW to the other base (setting knob points right). Set the VDW dial to zero.

NOTE: Step 10 applies to Indicator Control panel 2021290 only. Step 10A applies to all Indicator Control panels except 2021290.

10. Set OPTICS ZERO switch on Indicator Control panel to OFF. Set OPTICS MODE switch to CMC and perform the following DSKY operations:

a. VERB 41 NOUN 55 ENTR
b. +27000 ENTR
c. +45000 ENTR

Wait until optics stop driving before proceeding.

10A. Set OPTICS MODE switch on Indicator Control panel to CGC and perform the following DSKY operations:

a. VERB 41 NOUN 55 ENTR
b. +27000 ENTR
c. +45000 ENTR

Wait until optics stop driving before proceeding.

11. Cover the SXT StLOS. Sight through the SXT LLOS and move the VDW laterally until the target number 1 reticle is seen clearly. Adjust the VDW dial until the central vertical reticle line of SXT is coincident with dot and vertical reticle line of target number 1. Record the VDW dial reading on line (g. 1). Complete line (g. 2). Uncover the SXT StLOS.

12. Complete lines (h), (i), (j), and (k) on the Data Sheet.

13. Place the VDW in front of target number 3 and cover target number 1.

14. Set the VDW to the value recorded on line (k).

NOTE: Step 15 applies to Indicator Control panel 2021290 only. Step 15A applies to all Indicator Control panels except 2021290.

15. Set OPTICS MODE switch on Indicator Control panel to MAN and set OPTICS SPEED switch to LO.

15A. Set OPTICS MODE switch on Indicator Control panel to MAN and set OPTICS CONTROLLER SPEED switch to LO.

16. Manipulate the Optics Hand Controller vertically to position the SXT StLOS until the central dot on reticle of target number 3 approaches the vertical crosshair on the SXT reticle. At the instant of coincidence, press the MARK pushbutton.

NOTE: VERB 06, NOUN 56 shall appear on the CMC DSKY indicating optical CDU and time displays.

17. Record the DSKY Row 2 indication on line (l) of the Data Sheet. Repeat step 16 two more times, recording the DSKY Row 2 indication for each MARK.

18. Observe the three bit counts of line (l) of the Data Sheet. If two of the three counts are equal, record this count in line (m). If all three counts are different, record the count which falls between the smallest and the largest on line (m).

19. Complete lines (n) and (o) of the Data Sheet.

20. Set the VDW to the value recorded on line (o).

21. Manipulate the Optics Hand Controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 approaches the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

22. Record the DSKY Row 2 indication on line (p) of the Data Sheet. Repeat step 21 two more times, recording the DSKY Row 2 indication for each MARK.

23. Observe the three bit counts of line (p). If two of the three counts are equal, record this count on line (q). If all three counts are different, record the count which falls between the smallest and the largest on line (q).

24. Complete lines (r), (s), (t) and (u).

25. Set the VDW to the value recorded on line (u).

26. Manipulate the Optics Hand Controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 is approaching the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

27. Record the DSKY Row 2 indication on line (v). Repeat step 26 two more times, recording the DSKY Row 2 indication for each MARK.

28. Observe the three bit counts of line (v). If two of the three counts are equal, record this count on line (w). If all three counts are different, record the count which falls between the smallest and the largest on line (w).

29. Complete lines (x), (y), (z) and (aa).

30. Set the VDW to the value recorded on line (aa).

31. Manipulate the Optics Hand Controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 is approaching the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

32. Record the DSKY Row 2 indication on line (ab). Repeat step 31 two more times,

recording the DSKY Row 2 indication for each MARK.

33. Observe the three bit counts of line (ab). If two of the three counts are equal, record this count on line (ac). If all three counts are different, record the count which falls between the smallest and the largest on line (ac).

34. Complete lines (ad), (ae), (af) and (ag).

35. Set the VDW to the value recorded on line (ag).

36. Manipulate the Optics Hand Controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 is approaching the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

37. Record the DSKY Row 2 indication on line (ah). Repeat step 36 two more times, recording the DSKY Row 2 indication for each MARK.

38. Observe the three bit counts on line (ah). If two of the three counts are equal, record this count on line (ai). If all three counts are different, record the count which falls between the smallest and the largest on line (ai).

39. Complete lines (aj), (ak), (al) and (am).

40. Set the VDW to the value recorded on line (am).

41. Manipulate the Optics Hand Controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 is approaching the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

42. Record the DSKY Row 2 indication on line (an). Repeat step 41 two more times, recording the DSKY Row 2 indication for each MARK.

43. Observe the three bit counts on line (an). If two of the three counts are equal, record this count on line (ao). If all three counts are different, record the count which falls between the smallest and the largest on line (ao).

44. Complete lines (ap), (aq), (ar) and (as).

45. Set the VDW to the value recorded on line (as).

46. Manipulate the Optics Hand Controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 is approaching the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

47. Record the DSKY Row 2 indication on line (at). Repeat step 46 two more times, recording the DSKY Row 2 indication for each MARK.

48. Observe the three bit counts on line (at). If two of the three counts are equal, record this count on line (au). If all three counts are different, record the count which falls between the smallest and the largest on line (au).

49. Complete lines (av) and (aw).

49A. Using Optics Hand Controller, position the SXT Trunnion between 0° and 10° as indicated by the Trunnion TPAC.

NOTE: Step 50 applies to
Indicator Control panel
2021290 only. Step 50A
applies to all Indicator
Control panels except
2021290.

50. Set OPTICS ZERO switch on Indicator Control panel to ZERO. After approximately 20 seconds, set OPTICS ZERO switch to OFF.

50A. Set OPTICS MODE switch on Indicator Control panel to ZERO. After approximately 20 seconds, set OPTICS MODE switch to MAN.

NOTE: Step 51 applies to
Indicator Control panel
2021290 only. Step 51A
applies to all Indicator
Control panels except
2021290.

51. Set OPTICS SPEED switch to HI and, using Optics Hand Controller, drive SXT until Shaft TPAC indicates approximately +27000. Return OPTICS SPEED switch to LO and manipulate Optics Hand Controller to fine position and hold SXT so Shaft TPAC indicates +27000.

51A. Set OPTICS CONTROLLER SPEED switch to HI and, using Optics Hand Controller, drive SXT until Shaft TPAC indicates approximately +27000. Return OPTICS CONTROLLER SPEED switch to LO and manipulate Optics Hand Controller to fine position and hold SXT so Shaft TPAC indicates +27000.

52. Insure that the horizontal reticle line of the SCT is coincident with the horizontal reticle line of target number 2 by adjusting the G & N Mounting Fixture cradle.

NOTE: Step 53 applies to
Indicator Control panel
2021290 only. Step 53A
applies to all Indicator
Control panels except
2021290.

53. Set OPTICS ZERO switch on Indicator Control panel to ZERO. After approximately 20 seconds, set OPTICS ZERO switch to OFF. Set OPTICS TEL TRUN switch to 25°. The target number 2 reticle pattern shall appear to intersect the number 0 on the SCT vertical reticle line.

53A. Set OPTICS MODE switch on Indicator Control panel to ZERO. After approximately 20 seconds, set OPTICS MODE switch to MAN. Set OPTICS TELESCOPE TRUNNION switch to 25°. The target number 2 reticle pattern shall appear to intersect the number 0 on the SCT vertical reticle line.

NOTE: Step 54 applies to
Indicator Control panel
2021290 only. Step 54A
applies to all Indicator
Control panels except
2021290.

54. Set OPTICS TEL TRUN switch to 0°. The target number 2 reticle pattern shall appear to intersect the center of the SCT reticle pattern.

54A. Set OPTICS TELESCOPE TRUNNION switch to 0°. The target number 2 reticle pattern shall appear to intersect the center of the SCT reticle pattern.

NOTE: Step 55 applies to
Indicator Control panel
2021290 only. Step 55A
applies to all Indicator
Control panels except
2021290.

55. Set OPTICS TEL TRUN switch to SLAVE TO SXT.

55A. Set OPTICS TELESCOPE TRUNNION switch to SLAVE TO SXT.

NOTE: Step 56 applies to
Indicator Control panel
2021290. Step 56A applies to all Indicator
Control panels except 2021290.

56. Set OPTICS ZERO switch to ZERO. After approximately 20 seconds, set OPTICS ZERO switch to OFF.

56A. Set OPTICS MODE switch to ZERO. After approximately 20 seconds, set OPTICS MODE switch to MAN.

NOTE: Step 57 applies to
Indicator Control panel
2021290 only. Step 57A
applies to all Indicator
Control panels except
2021290.

57. Set OPTICS SPEED switch to HI and, using Optics Hand Controller, drive SXT until Shaft TPAC indicates approximately +27000. Set OPTICS SPEED switch to LO and manipulate Optics Hand Controller to fine position and hold SXT so that Shaft TPAC indicates +27000.

57A. Set OPTICS CONTROLLER SPEED switch to HI and, using Optics Hand Controller, drive SXT until Shaft TPAC indicates approximately +27000. Set OPTICS CONTROLLER SPEED switch to LO and manipulate Optics Hand Controller to fine position and hold SXT so that Shaft TPAC indicates +27000.

58. Insure the horizontal reticle line of the SCT is coincident with horizontal reticle line of target number 2 by adjusting the G & N Mounting Fixture cradle.

59. Sight through the SXT StLOS and, using the Optics Hand Controller, position the approximate center of the SXT StLOS reticle pattern to the number 10 resolution pattern of target number 1.

60. Sight through StLOS and LLOS and observe the number 10 and surrounding lines of target number 1 reticle. The number 10 and surrounding lines shall be clear and distinct. Record indication.

61. Position the SCT resolution card approximately 10 feet from the SCT trunnion axis.

62. Sight through the SCT LOS and, using the Optics Hand Controller, position the approximate center of the SCT LOS reticle pattern to the 3 min. resolution pattern of the resolution card.

63. Sight through the SCT and observe the number and surrounding lines on the resolution card. The number and surrounding lines shall be clear and distinct. Record indication.

63A. Using Optics Hand Controller, position the SXT Trunnion between 0° and 10° as indicated by the Trunnion TPAC.

NOTE: Step 64 applies to
Indicator Control panel
2021290 only. Step 64A
applies to all Indicator
Control panels except
2021290.

64. Set OPTICS ZERO switch on Indicator Control panel to ZERO. After approximately 20 seconds, set OPTICS ZERO switch to OFF. Press OPTICS POWER ON pushbutton on Test Control panel. OPTICS POWER ON pushbutton shall go out.

64A. Set OPTICS MODE switch on Indicator Control panel to ZERO. After approximately 20 seconds, set OPTICS MODE switch to MAN. Press OPTICS POWER ON pushbutton on Test Control panel. OPTICS POWER ON pushbutton shall go out.

ALTERNATE SXT LOS PARALLELISM PROCEDURE

65. Place the theodolite in a line coincident with the SXT LLOS and cover the SXT StLOS.

66. Level theodolite base to the plate spirit level and level the altitude spirit level. Adjust the telescope focus to infinity. Set telescope to approximately 90°. Install the portable light assembly and adapter in the SXT eyepiece assembly. While observing the theodolite image, adjust the G & N Mounting Fixture until the SXT reticle is superimposed on the theodolite horizontal filar.

67. Align the theodolite horizontal filar to the SXT reticle and record the vertical angle.

68. Reverse and plunge the theodolite telescope and repeat step 67.

69. Repeat steps 67 and 68 for seven additional pairs of readings. After each time that step 68 is completed, drive the theodolite elevation off prior to realigning to the SXT reticle.

70. Place the theodolite in a line coincident with the SXT StLOS and cover the SXT LLOS.

JOB OPTICS POSITIONAL ACCURACY TEST | JDC 12214 REV P PAGE 9 OF 9

SUBSYSTEM G & N SYSTEM | ASSY

71. Repeat step 66.
72. Repeat steps 67, 68, and 69.
73. Complete calculations for SXT StLOS to LLOS parallelism error.
74. Continue normal test sequence at step 9.

TOOLS AND MATERIAL Variable Deviation Wedge
SCT Resolution Card

IMPORTANT: 1. Insure that JDC 19128 has been performed within the last six months. 2. Avoid slewing of SXT shaft and trunnion axes into their mechanical stops. 3. If a Fresh Start (VERB 36 ENTR) is performed at any time during performance of this JDC, set OPTICS ZERO switch (Indicator Control panel 2021290) to OFF and then to ON and wait 18 seconds before proceeding; or set OPTICS MODE switch (all Indicator Control panels except 2021290) to MAN and then to ZERO and wait 18 seconds before proceeding.

NOTE: 1. Perform JDC 12215 to establish a Master Initialization condition. Place the G & N Mounting Fixture in the 0.0° position immediately after the IMU is coarse aligned to zero degree. 2. Step 1 applies to Indicator Control panel 2021290 only. Step 1A applies to all Indicator Control panels except 2021290.

1. Press OPTICS POWER ON pushbutton on Test Control panel. OPTICS POWER ON pushbutton shall light. Insure that OPTICS TEL TRUN switch on Indicator Control panel is set to SLAVE TO SXT and the OPTICS

VERIFICATION WITH SDL REQUIRED BEFORE USE

ZERO switch is set to OFF. Press RSET pushbutton on DSKY and ALARM RESET pushbutton on Programmer and Monitor panel of CTS to reset alarms which may occur.

1A. Press OPTICS POWER ON pushbutton on Test Control panel. OPTICS POWER ON pushbutton shall light. Insure that OPTICS TELESCOPE TRUNNION switch on Indicator Control panel is set to SLAVE TO SXT and that OPTICS TRACKER switch is set to OFF. Press RSET pushbutton on DSKY and ALARM RESET pushbutton on Programmer and Monitor panel of CTS to reset alarms which may occur.

NOTE: Step 2 applies to Indicator Control panel 2021290 only. Step 2A applies to all Indicator Control panels except 2021290.

2. Set OPTICS COUPLING switch to DIRECT and set OPTICS SPEED switch to HI.

2A. Set OPTICS CONTROLLER COUPLING switch to DIRECT and set OPTICS CONTROLLER SPEED switch to HI.

3. Place OPTICS MODE switch on the Indicator Control Panel to MAN.

3A. Using Optics Hand Controller, position the SXT Trunnion between 0° and 10° as indicated by the Trunnion TPAC.

NOTE: Step 4 applies to Indicator Control panel 2021290 only. Step 4A applies to all Indicator Control panels except 2021290.

4. Set OPTICS ZERO switch to ZERO. After one minute, perform the following DSKY operations:

a. VERB 06 NOUN 55 ENTR
b. Record Row 1 (Shaft Angle) and Row 2 (Trunnion LOS Angle) indications on lines (a) and (b) of the Data Sheet.

4A. Set OPTICS MODE switch to ZERO. After one minute, perform the following DSKY operations:

a. VERB 06 NOUN 55 ENTR
b. Record Row 1 (Shaft Angle) and Row 2 (Trunnion LOS Angle) indications on lines (a) and (b) of the Data Sheet.

5. Place the Variable Deviation Wedge (VDW) in front of target number 1 using the VDW base which allows deviation to be measured in the vertical plane (setting knob points upward). Set VDW dial to zero.

6. Cover the SXT StLOS. Sight through the SXT LLOS and adjust the G & N Mounting Fixture until the horizontal reticle line of the SXT is coincident with the dot and horizontal reticle line of target number 1.

---

7. Sight through the SXT LLOS and move the VDW laterally until target number 1 reticle is seen clearly. Adjust the VDW dial until the central horizontal reticle line of SXT is coincident with dot and horizontal reticle line of target number 1. Record the VDW reading on line (c). Uncover the SXT StLOS.

NOTE: If the value obtained for line (g) in step 8 is not within tolerance, perform the alternate procedure given in steps 65 through 74 to verify that an out-of-tolerance condition exists.

8. Cover the SXT LLOS. Sight through the SXT StLOS and adjust the VDW dial until the central horizontal reticle line of SXT is coincident with the dot and horizontal reticle line of target number 1. Record the VDW reading on line (e). Complete lines (d), (f), and (g). Uncover SXT LLOS.

9. Rotate the VDW to the other base (setting knob points right). Set the VDW dial to zero.

NOTE: Step 10 applies to Indicator Control panel 2021290 only. Step 10A applies to all Indicator Control panels except 2021290.

10. Set OPTICS ZERO switch on Indicator Control panel to OFF. Set OPTICS MODE switch to CMC and perform the following DSKY operations:

a. VERB 41 NOUN 55 ENTR
b. +27000 ENTR
c. +45000 ENTR

Wait until optics stop driving before proceeding.

10A. Set OPTICS MODE switch on Indicator Control panel to CGC and perform the following DSKY operations:

a. VERB 41 NOUN 55 ENTR
b. +27000 ENTR
c. +45000 ENTR

Wait until optics stop driving before proceeding.

11. Cover the SXT StLOS. Sight through the SXT LLOS and move the VDW laterally until the target number 1 reticle is seen clearly. Adjust the VDW dial until the central vertical reticle line of SXT is coincident with dot and vertical reticle line of target number 1. Record the VDW dial reading on line (g.1). Complete line (g.2). Uncover the SXT StLOS.

12. Complete lines (h), (i), (j), and (k) on the Data Sheet.

13. Place the VDW in front of target number 3 and cover target number 1.

14. Set the VDW to the value recorded on line (k).

NOTE: Step 15 applies to Indicator Control panel 2021290 only. Step 15A applies to all Indicator Control panels except 2021290.

---

15. Set OPTICS MODE switch on Indicator Control panel to MAN and set OPTICS SPEED switch to LO.

15A. Set OPTICS MODE switch on Indicator Control panel to MAN and set OPTICS CONTROLLER SPEED switch to LO.

16. Manipulate the Optics Hand Controller vertically to position the SXT StLOS until the central dot on reticle of target number 3 approaches the vertical crosshair on the SXT reticle. At the instant of coincidence, press MARK pushbutton.

NOTE: VERB 06, NOUN 56 shall appear on the CMC DSKY indicating optical CDU and time displays.

17. Record the DSKY Row 2 indication on line (l) of the Data Sheet. Repeat step 16 two more times, recording the DSKY Row 2 indication for each MARK.

18. Observe the three bit counts of line (l) of the Data Sheet. If two of the three counts are equal, record this count in line (m). If all three counts are different, record the count which falls between the smallest and the largest on line (m).

19. Complete lines (n) and (o) of the Data Sheet.

20. Set the VDW to the value recorded on line (o).

21. Manipulate the Optics Hand Controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 approaches the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

22. Record the DSKY Row 2 indication on line (p) of the Data Sheet. Repeat step 21 two more times, recording the DSKY Row 2 indication for each MARK.

23. Observe the three bit counts of line (p). If two of the three counts are equal, record this count on line (q). If all three counts are different, record the count which falls between the smallest and the largest on line (q).

24. Complete lines (r), (s), (t) and (u).

25. Set the VDW to the value recorded on line (u).

26. Manipulate the Optics Hand Controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 is approaching the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

27. Record the DSKY Row 2 indication on line (v). Repeat step 26 two more times, recording the DSKY Row 2 indication for each MARK.

28. Observe the three bit counts of line (v). If two of the three counts are equal, record this count on line (w). If all three counts are different, record the count which falls between the smallest and the largest on line (w).

29. Complete lines (x), (y), (z) and (aa).

30. Set the VDW to the value recorded on line (aa).

31. Manipulate the Optics Hand Controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 is approaching the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

32. Record the DSKY Row 2 indication on line (ab). Repeat step 31 two more times, recording the DSKY Row 2 indication for each MARK.

33. Observe the three bit counts of line (ab). If two of the three counts are equal, record this count on line (ac). If all three counts are different, record the count which falls between the smallest and the largest on line (ac).

34. Complete lines (ad), (ae), (af) and (ag).

35. Set the VDW to the value recorded on line (ag).

36. Manipulate the Optics Hand Controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 is approaching the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

37. Record the DSKY Row 2 indication on line (ah). Repeat step 36 two more times, recording the DSKY Row 2 indication for each MARK.

38. Observe the three bit counts on line (ah). If two of the three counts are equal, record this count on line (ai). If all three counts are different, record the count which falls between the smallest and the largest on line (ai).

39. Complete lines (aj), (ak), (al) and (am).

40. Set the VDW to the value recorded on line (am).

41. Manipulate the Optics Hand Controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 is approaching the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

42. Record the DSKY Row 2 indication on line (an). Repeat step 41 two more times, recording the DSKY Row 2 indication for each MARK.

43. Observe the three bit counts on line (an). If two of the three counts are equal, record this count on line (ao). If all three counts are different, record the count which falls between the smallest and the largest on line (ao).

44. Complete lines (ap), (aq), (ar) and (as).

45. Set the VDW to the value recorded on line (as).

46. Manipulate the Optics Hand Controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 is approaching the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

47. Record the DSKY Row 2 indication on line (at). Repeat step 46 two more times, recording the DSKY Row 2 indication for each MARK.

---

48. Observe the three bit counts on line (at). If two of the three counts are equal, record this count on line (au). If all three counts are different, record the count which falls between the smallest and the largest on line (au).

49. Complete lines (av) and (aw).

49A. Using Optics Hand Controller, position the SXT Trunnion between 0° and 10° as indicated by the Trunnion TPAC.

NOTE: Step 50 applies to
Indicator Control panel
2021290 only. Step 50A
applies to all Indicator
Control panels except
2021290.

50. Set OPTICS ZERO switch on Indicator Control panel to ZERO. After approximately 20 seconds, set OPTICS ZERO switch to OFF.

50A. Set OPTICS MODE switch on Indicator Control panel to ZERO. After approximately 20 seconds, set OPTICS MODE switch to MAN.

NOTE: Step 51 applies to
Indicator Control panel
2021290 only. Step 51A
applies to all Indicator
Control panels except
2021290.

51. Set OPTICS SPEED switch to HI and, using Optics Hand Controller, drive SXT until Shaft TPAC indicates approximately +27000. Return OPTICS SPEED switch to LO and manipulate Optics Hand Controller to fine position and hold SXT so Shaft TPAC indicates +27000.

51A. Set OPTICS CONTROLLER SPEED switch to HI and, using Optics Hand Controller, drive SXT until Shaft TPAC indicates approximately +27000. Return OPTICS CONTROLLER SPEED switch to LO and manipulate Optics Hand Controller to fine position and hold SXT so Shaft TPAC indicates +27000.

52. Insure that the horizontal reticle line of the SCT is coincident with the horizontal reticle line of target number 2 by adjusting the G & N Mounting Fixture cradle.

NOTE: Step 53 applies to
Indicator Control panel
2021290 only. Step 53A
applies to all Indicator
Control panels except
2021290.

53. Set OPTICS ZERO switch on Indicator Control panel to ZERO. After approximately 20 seconds, set OPTICS ZERO switch to OFF. Set OPTICS TEL TRUN switch to 25°. The target number 2 reticle pattern shall appear to intersect the number 0 on the SCT vertical reticle line.

53A. Set OPTICS MODE switch on Indicator Control panel to ZERO. After approximately 20 seconds, set OPTICS MODE switch to MAN. Set OPTICS TELESCOPE TRUNNION switch to 25°. The target number 2 reticle pattern shall appear to intersect the number 0 on the SCT vertical reticle line.

NOTE: Step 54 applies to
Indicator Control panel
2021290 only. Step 54A
applies to all Indicator
Control panels except
2021290.

54. Set OPTICS TEL TRUN switch to 0°. The target number 2 reticle pattern shall appear to intersect the center of the SCT reticle pattern.

54A. Set OPTICS TELESCOPE TRUNNION switch to 0°. The target number 2 reticle pattern shall appear to intersect the center of the SCT reticle pattern.

NOTE: Step 55 applies to
Indicator Control panel
2021290 only. Step 55A
applies to all Indicator
Control panels except
2021290.

55. Set OPTICS TEL TRUN switch to SLAVE TO SXT.

55A. Set OPTICS TELESCOPE TRUNNION switch to SLAVE TO SXT.

NOTE: Step 56 applies to
Indicator Control panel
2021290. Step 56A applies to all Indicator
Control panels except 2021290.

56. Set OPTICS ZERO switch to ZERO. After approximately 20 seconds, set OPTICS ZERO switch to OFF.

56A. Set OPTICS MODE switch to ZERO. After approximately 20 seconds, set OPTICS MODE switch to MAN.

NOTE: Step 57 applies to
Indicator Control panel
2021290 only. Step 57A
applies to all Indicator
Control panels except
2021290.

57. Set OPTICS SPEED switch to HI and using Optics Hand Controller, drive SXT until Shaft TPAC indicates approximately +27000. Set OPTICS SPEED switch to LO and manipulate Optics Hand Controller to fine position and hold SXT so that Shaft TPAC indicates +27000.

57A. Set OPTICS CONTROLLER SPEED switch to HI and, using Optics Hand Controller, drive SXT until Shaft TPAC indicates approximately +27000. Set OPTICS CONTROLLER SPEED switch to LO and manipulate Optics Hand Controller to fine position and hold SXT so that Shaft TPAC indicates +27000.

58. Insure the horizontal reticle line of the SCT is coincident with horizontal reticle line of target number 2 by adjusting the G & N Mounting Fixture cradle.

59. Sight through the SXT StLOS and, using the Optics Hand Controller, position the approximate center of the SXT StLOS reticle pattern to the number 10 resolution pattern of target number 1.

---

60. Sight through StLOS and LLOS and observe the number 10 and surrounding lines of target number 1 reticle. The number 10 and surrounding lines shall be clear and distinct. Record indication.

61. Position the SCT resolution card approximately 10 feet from the SCT trunnion axis.

62. Sight through the SCT LOS and, using the Optics Hand Controller, position the approximate center of the SCT LOS reticle pattern to the 3 min. resolution pattern of the resolution card.

63. Sight through the SCT and observe the number and surrounding lines on the resolution card. The number and surrounding lines shall be clear and distinct. Record indication.

63A. Using Optics Hand Controller, position the SXT Trunnion between 0° and 10° as indicated by the Trunnion TPAC.

NOTE: Step 64 applies to
Indicator Control panel
2021290 only. Step 64A
applies to all Indicator
Control panels except
2021290.

64. Set OPTICS ZERO switch on Indicator Control panel to ZERO. After approximately 20 seconds, set OPTICS ZERO switch to OFF. Press OPTICS POWER ON pushbutton on Test Control panel. OPTICS POWER ON pushbutton shall go out.

64A. Set OPTICS MODE switch on Indicator Control panel to ZERO. After approximately 20 seconds, set OPTICS MODE switch to MAN. Press OPTICS POWER ON pushbutton on Test Control panel. OPTICS POWER ON pushbutton shall go out.

ALTERNATE SXT LOS PARALLELISM PROCEDURE

65. Place the theodolite in a line coincident with the SXT LLOS and cover the SXT StLOS.

66. Level theodolite base to the plate spirit level and level the altitude spirit level. Adjust the telescope focus to infinity. Set telescope to approximately 90°. Install the portable light assembly and adapter in the SXT eyepiece assembly. While observing the theodolite image, adjust the G & N Mounting Fixture until the SXT reticle is superimposed on the theodolite horizontal filar.

67. Align the theodolite horizontal filar to the SXT reticle and record the vertical angle.

68. Reverse and plunge the theodolite telescope and repeat step 67.

69. Repeat steps 67 and 68 for seven additional pairs of readings. After each time that step 68 is completed, drive the theodolite elevation off prior to realigning to the SXT reticle.

70. Place the theodolite in a line coincident with the SXT StLOS and cover the SXT LLOS.

JOB OPTICS POSITIONAL ACCURACY TEST | JDC 12214 REV R PAGE 9 OF 9

SUBSYSTEM G & N SYSTEM | ASSY

71. Repeat step 66.
72. Repeat steps 67, 68, and 69.
73. Complete calculations for SXT StLOS to LLOS parallelism error.
74. Continue normal test sequence at step 9.

JDC 19128

IMPORTANT See below.

INTERVAL

TOOLS AND MATERIAL Variable Deviation Wedge
SCT Resolution Card

IMPORTANT: 1. Insure that JDC 19128 has been performed within the last six months. 2. Avoid slewing of SXT shaft and trunnion axes into their mechanical stops. 3. If a Fresh Start (VERB 36 ENTR) is performed at any time during performance of this JDC, set OPTICS ZERO switch (Indicator Control panel 2021290) to OFF and then to ON and wait 18 seconds before proceeding; or set OPTICS MODE switch (all Indicator Control panels except 2021290) to MAN and then to ZERO and wait 18 seconds before proceeding.

NOTE: 1. Perform JDC 12215 to establish a Master Initialization condition. Place the G & N Mounting Fixture in the 0.0° position immediately after the IMU is coarse aligned to zero degree. 2. Step 1 applies to Indicator Control panel 2021290 only. Step 1A applies to all Indicator Control panels except 2021290.

1. Press OPTICS POWER ON pushbutton on Test Control panel. OPTICS POWER ON pushbutton shall light. Insure that OPTICS TEL TRUN switch on Indicator Control panel is set to SLAVE TO SXT and the OPTICS

VERIFICATION WITH SIDL REQUIRED BEFORE USE

ZERO switch is set to OFF. Press RSET pushbutton on DSKY and ALARM RESET pushbutton on Programmer and Monitor panel of CTS to reset alarms which may occur.

1A. Press OPTICS POWER ON pushbutton on Test Control panel. OPTICS POWER ON pushbutton shall light. Insure that OPTICS TELESCOPE TRUNNION switch on Indicator Control panel is set to SLAVE TO SXT and that OPTICS TRACKER switch is set to OFF. Press RSET pushbutton on DSKY and ALARM RESET pushbutton on Programmer and Monitor panel of CTS to reset alarms which may occur.

NOTE: Step 2 applies to Indicator Control panel 2021290 only. Step 2A applies to all Indicator Control panels except 2021290.

2. Set OPTICS COUPLING switch to DIRECT and set OPTICS SPEED switch to HI.

2A. Set OPTICS CONTROLLER COUPLING switch to DIRECT and set OPTICS CONTROLLER SPEED switch to HI.

3. Place OPTICS MODE switch on the Indicator Control panel to MAN.

4. through 7. Deleted.

8. Cover the SXT StLOS. Sight through the SXT LLOS and adjust the G&N Mounting Fixture until the single vertical reticle line is adjacent to the dot of target number 1.

9. Place the Variable Deviation Wedge (VDW) in front of target number 1 using the VDW base which allows deviation to be measured in the horizontal plane (setting knob points right). Set the VDW dial to zero.

NOTE: Step 10 applies to Indicator Control panel 2021290 only. Step 10A applies to all Indicator Control panels except 2021290.

10. Set OPTICS MODE switch to CMC and perform the following DSKY operations:

a. VERB 41 NOUN 55 ENTR
b. +27000 ENTR
c. +45000 ENTR

Wait until optics stop driving before proceeding.

10A. Set OPTICS MODE switch on Indicator Control panel to CGC and perform the following DSKY operations:

a. VERB 41 NOUN 55 ENTR
b. +27000 ENTR
c. +45000 ENTR

Wait until optics stop driving before proceeding.

11. Sight through the SXT LLOS and move the VDW laterally until the target number 1 reticle is seen clearly. Adjust the VDW dial until the central vertical reticle line of SXT is coincident with dot and vertical

---

reticle line of target number 1. Record the VDW dial reading on line (g.1). Complete line (g.2). Uncover the SXT StLOS.

12. Complete lines (h), (i), (j), and (k) on the Data Sheet.

13. Place the VDW in front of target number 3 and cover target number 1.

14. Set the VDW to the value recorded on line (k).

NOTE: Step 15 applies to Indicator Control panel 2021290 only. Step 15A applies to all Indicator Control panels except 2021290.

15. Set OPTICS MODE switch on Indicator Control panel to MAN and set OPTICS SPEED switch to LO.

15A. Set OPTICS MODE switch on Indicator Control panel to MAN and set OPTICS CONTROLLER SPEED switch to LO.

16. Manipulate the Optics Hand Controller vertically to position the SXT StLOS until the central dot on reticle of target number 3 approaches the vertical crosshair on the SXT reticle. At the instant of coincidence, press MARK pushbutton.

NOTE: VERB 06, NOUN 56 shall appear on the CMC DSKY indicating optical CDU and time displays.

17. Record the DSKY Row 2 indication on line (1) of the Data Sheet. Repeat step 16 two more times, recording the DSKY Row 2 indication for each MARK.

18. Observe the three bit counts of line (1) of the Data Sheet. If two of the three counts are equal, record this count in line (m). If all three counts are different, record the count which falls between the smallest and the largest on line (m).

19. Complete lines (n) and (o) of the Data Sheet.

20. Set the VDW to the value recorded on line (o).

21. Manipulate the Optics Hand Controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 approaches the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

22. Record the DSKY Row 2 indication on line (p) of the Data Sheet. Repeat step 21 two more times, recording the DSKY Row 2 indication for each MARK.

23. Observe the three bit counts of line (p). If two of the three counts are equal, record this count on line (q). If all three counts are different, record the count which falls between the smallest and the largest on line (q).

24. Complete lines (r), (s), (t) and (u).

25. Set the VDW to the value recorded on line (u).

26. Manipulate the Optics Hand Controller vertically to position the SXT StLOS until the central dot on the reticle of target

---

number 3 is approaching the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

27. Record the DSKY Row 2 indication on line (v). Repeat step 26 two more times, recording the DSKY Row 2 indication for each MARK.

28. Observe the three bit counts of line (v). If two of the three counts are equal, record this count on line (w). If all three counts are different, record the count which falls between the smallest and the largest on line (w).

29. Complete lines (x), (y), (z) and (aa).

30. Set the VDW to the value recorded on line (aa).

31. Manipulate the Optics Hand Controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 is approaching the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

32. Record the DSKY Row 2 indication on line (ab). Repeat step 31 two more times, recording the DSKY Row 2 indication for each MARK.

33. Observe the three bit counts of line (ab). If two of the three counts are equal, record this count on line (ac). If all three counts are different, record the count which falls between the smallest and the largest on line (ac).

34. Complete lines (ad), (ae), (af) and (ag).

35. Set the VDW to the value recorded on line (ag).

36. Manipulate the Optics Hand Controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 is approaching the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

37. Record the DSKY Row 2 indication on line (ah). Repeat step 36 two more times, recording the DSKY Row 2 indication for each MARK.

38. Observe the three bit counts on line (ah). If two of the three counts are equal, record this count on line (ai). If all three counts are different, record the count which falls between the smallest and the largest on line (ai).

39. Complete lines (aj), (ak), (al) and (am).

40. Set the VDW to the value recorded on line (am).

41. Manipulate the Optics Hand Controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 is approaching the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

42. Record the DSKY Row 2 indication on line (an). Repeat step 41 two more times, recording the DSKY Row 2 indication for each MARK.

43. Observe the three bit counts on line (an). If two of the three counts are equal, record this count on line (ao). If all three

counts are different, record the count which falls between the smallest and the largest on line (ac).

44. Complete lines (ap), (aq), (ar) and (as).

45. Set the VDW to the value recorded on line (as).

46. Manipulate the Optics Hand Controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 is approaching the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

47. Record the DSKY Row 2 indication on line (at). Repeat step 46 two more times, recording the DSKY Row 2 indication for each MARK.

48. Observe the three bit counts on line (at). If two of the three counts are equal, record this count on line (au). If all three counts are different, record the count which falls between the smallest and the largest on line (au).

49. Complete lines (av) and (aw).

49A. Using Optics Hand Controller, position the SXT Trunnion between 0° and 10° as indicated by the Trunnion TPAC.

NOTE: Step 50 applies to Indicator Control panel 2021290 only. Step 50A applies to all Indicator Control panels except 2021290.

50. Set OPTICS ZERO switch on Indicator Control panel to ZERO. After approximately 20 seconds, set OPTICS ZERO switch to OFF.

50A. Set OPTICS MODE switch on Indicator Control panel to ZERO. After approximately 20 seconds, set OPTICS MODE switch to MAN.

NOTE: Step 51 applies to Indicator Control panel 2021290 only. Step 51A applies to all Indicator Control panels except 2021290.

51. Set OPTICS SPEED switch to HI and, using Optics Hand Controller, drive SXT until Shaft TPAC indicates approximately +27000. Return OPTICS SPEED switch to LO and manipulate Optics Hand Controller to fine position and hold SXT so Shaft TPAC indicates +27000.

51A. Set OPTICS CONTROLLER SPEED switch to HI and, using Optics Hand Controller, drive SXT until Shaft TPAC indicates approximately +27000. Return OPTICS CONTROLLER SPEED switch to LO and manipulate Optics Hand Controller to fine position and hold SXT so Shaft TPAC indicates +27000.

52. Insure that the horizontal reticle line of the SCT is coincident with the horizontal reticle line of target number 2 by adjusting the G & N Mounting Fixture cradle.

NOTE: Step 53 applies to Indicator Control panel 2021290 only. Step 53A applies to all Indicator Control panels except 2021290.

53. Set OPTICS ZERO switch on Indicator Control panel to ZERO. After approximately 20 seconds, set OPTICS ZERO switch to OFF. Set OPTICS TEL TRUN switch to 25°. The target number 2 reticle pattern shall appear to intersect the number 0 on the SCT vertical reticle line.

53A. Set OPTICS MODE switch on Indicator Control panel to ZERO. After approximately 20 seconds, set OPTICS MODE switch to MAN. Set OPTICS TELESCOPE TRUNNION switch to 25°. The target number 2 reticle pattern shall appear to intersect the number 0 on the SCT vertical reticle line.

NOTE: Step 54 applies to Indicator Control panel 2021290 only. Step 54A applies to all Indicator Control panels except 2021290.

54. Set OPTICS TEL TRUN switch to 0°. The target number 2 reticle pattern shall appear to intersect the center of the SCT reticle pattern.

54A. Set OPTICS TELESCOPE TRUNNION switch to 0°. The target number 2 reticle pattern shall appear to intersect the center of the SCT reticle pattern.

NOTE: Step 55 applies to Indicator Control panel 2021290 only. Step 55A applies to all Indicator Control panels except 2021290.

55. Set OPTICS TEL TRUN switch to SLAVE TO SXT.

55A. Set OPTICS TELESCOPE TRUNNION switch to SLAVE TO SXT.

NOTE: Step 56 applies to Indicator Control panel 2021290. Step 56A applies to all Indicator Control panels except 2021290.

56. Set OPTICS ZERO switch to ZERO. After approximately 20 seconds, set OPTICS ZERO switch to OFF.

56A. Set OPTICS MODE switch to ZERO. After approximately 20 seconds, set OPTICS MODE switch to MAN.

NOTE: Step 57 applies to Indicator Control panel 2021290 only. Step 57A applies to all Indicator Control panels except 2021290.

57. Set OPTICS SPEED switch to HI and, using Optics Hand Controller, drive SXT until Shaft TPAC indicates approximately +27000. Set OPTICS SPEED switch to LO and manipulate Optics Hand Controller to fine position and hold SXT so that Shaft TPAC indicates +27000.

57A. Set OPTICS CONTROLLER SPEED switch to HI and, using Optics Hand Controller, drive SXT until Shaft TPAC indicates approximately +27000. Set OPTICS CONTROLLER SPEED switch to LO and manipulate Optics Hand Controller to fine position and hold SXT so that Shaft TPAC indicates +27000.

58. Insure the horizontal reticle line of the SCT is coincident with horizontal reticle line of target number 2 by adjusting the G & N Mounting Fixture cradle.

59. Sight through the SXT StLOS and, using the Optics Hand Controller, position the approximate center of the SXT StLOS reticle pattern to the number 10 resolution pattern of target number 1.

60. Sight through StLOS and LLOS and observe the number 10 and surrounding lines of target number 1 reticle. The number 10 and surrounding lines shall be clear and distinct. Record indication.

61. Position the SCT resolution card approximately 10 feet from the SCT trunnion axis.

62. Sight through the SCT LOS and, using the Optics Hand Controller, position the approximate center of the SCT LOS reticle pattern to the 3 min. resolution pattern of the resolution card.

63. Sight through the SCT and observe the number and surrounding lines on the resolution card. The number and surrounding lines shall be clear and distinct. Record indication.

64. Using Optics Hand Controller, position the SXT Trunnion between 0° and 10° as indicated by the Trunnion TPAC.

NOTE: Step 65 applies to Indicator Control panel 2021290 only. Step 65A applies to all Indicator Control panels except 2021290.

65. Set OPTICS ZERO switch to ZERO. After one minute, perform following DSKY operations:

a. VERB 06 NOUN 55 ENTR
b. Record Row 1 (Shaft Angle) and Row 2 (Trunnion LOS Angle) indications on lines (a) and (b) of the Data Sheet.

65A. Set OPTICS MODE switch to ZERO. After one minute, perform the following DSKY operations:

a. VERB 06 NOUN 55 ENTR
b. Record Row 1 (Shaft Angle) and Row 2 (Trunnion LOS Angle) indications on lines (a) and (b) of the Data Sheet.

66. Place the VDW in front of target number 1 using the VDW base which allows deviation to be measured in the vertical plane (setting knob points upward). Set VDW dial to zero.

67. Cover the SXT StLOS. Sight through the SXT LLOS and adjust the G & N Mounting Fixture until the horizontal reticle line of the SXT is coincident with the dot and horizontal reticle line of target number 1.

NOTE: If coincidence cannot be achieved in step 67 by adjusting the G & N Mounting Fixture, target number 1 may be adjusted in azimuth as necessary to achieve coincidence.

68. Sight through the SXT LLOS and move the VDW laterally until target number 1 reticle is seen clearly. Adjust the VDW dial until the central horizontal reticle line of SXT is coincident with dot and horizontal reticle line of target number 1. Record the VDW reading on line (c). Uncover the SXT StLOS.

NOTE: If the value obtained for line (g) in step 69 is not within tolerance, perform the alternate procedure given in steps 72 through 80 to verify that an out-of-tolerance condition exists.

69. Cover the SXT LLOS. Sight through the SXT StLOS and adjust the VDW dial until the central horizontal reticle line of SXT is coincident with the dot and horizontal reticle line of target number 1. Record the VDW reading on line (e). Complete lines (d), (f), and (g). Uncover SXT LLOS.

NOTE: Step 70 applies to Indicator Control panel 2021290 only. Step 70A applies to all Indicator Control panels except 2021290.

70. Set OPTICS ZERO switch on Indicator Control panel to OFF.

70A. Set OPTICS MODE switch on Indicator Control panel to MAN.

71. Press OPTICS POWER ON pushbutton on Test Control panel. OPTICS POWER ON pushbutton shall go out.

ALTERNATE SXT LOS PARALLELISM PROCEDURE

72. Place the theodolite in a line coincident with the SXT LLOS and cover the SXT StLOS.

73. Level theodolite base to the plate spirit level and level the altitude spirit level. Adjust the telescope focus to infinity. Set telescope to approximately 90°. Install the portable light assembly and adapter in the SXT eyepiece assembly. While observing the theodolite image, adjust the G & N Mounting Fixture until the SXT reticle is superimposed on the theodolite horizontal filar.

74. Align the theodolite horizontal filar to the SXT reticle and record the vertical angle.

75. Reverse and plunge the theodolite telescope and repeat step 74.

76. Repeat steps 74 and 75 for seven additional pairs of readings. After each time that step 75 is completed, drive the theodolite elevation off prior to realigning to the SXT reticle.

77. Place the theodolite in a line coincident with the SXT StLOS and cover the SXT LLOS.

78. Repeat step 73.

79. Repeat steps 74, 75, and 76.

80. Complete calculations for SXT StLOS to LLOS parallelism error. ______

JDC 19128

IMPORTANT See below.

INTERVAL

TOOLS AND MATERIAL Variable Deviation Wedge
SCT Resolution Card

IMPORTANT: 1. Insure that JDC 19128 has been performed within the last six months. 2. Avoid slewing of SXT shaft and trunnion axes into their mechanical stops. 3. If a Fresh Start (VERB 36 ENTR) is performed at any time during performance of this JDC, set OPTICS ZERO switch (Indicator Control panel 2021290) to OFF and then to ON and wait 18 seconds before proceeding; or set OPTICS MODE switch (all Indicator Control panels except 2021290) to MAN and then to ZERO and wait 18 seconds before proceeding.

NOTE: 1. Perform JDC 12215 to establish a Master Initialization condition. Place the G & N Mounting Fixture in the 0.0° position immediately after the IMU is coarse aligned to zero degree. 2. Step 1 applies to Indicator Control panel 2021290 only. Step 1A applies to all Indicator Control panels except 2021290.

VERIFICATION WITH SIDL REQUIRED BEFORE USE

---

1. Press OPTICS POWER ON pushbutton on Test Control panel. OPTICS POWER ON pushbutton shall light. Insure that OPTICS TEL TRUN switch on Indicator Control panel is set to SLAVE TO SXT and the OPTICS ZERO switch is set to OFF. Press RSET pushbutton on DSKY and ALARM RESET pushbutton on Programmer and Monitor panel of CTS to reset alarms which may occur.

1A. Press OPTICS POWER ON pushbutton on Test Control panel. OPTICS POWER ON pushbutton shall light. Insure that OPTICS TELESCOPE TRUNNION switch on Indicator Control panel is set to SLAVE TO SXT and that OPTICS TRACKER switch is set to OFF. Press RSET pushbutton on DSKY and ALARM RESET pushbutton on Programmer and Monitor panel of CTS to reset alarms which may occur.

NOTE: Step 2 applies to Indicator Control panel 2021290 only. Step 2A applies to all Indicator Control panels except 2021290.

2. Set OPTICS COUPLING switch to DIRECT and set OPTICS SPEED switch to HI.

2A. Set OPTICS CONTROLLER COUPLING switch to DIRECT and set OPTICS CONTROLLER SPEED switch to HI.

3. Place OPTICS MODE switch on the Indicator Control panel to MAN.

NOTE: Step 4 applies to Indicator Control panel 2021290 only. Step 4A applies to all Indicator Control panels except 2021290.

4. Set OPTICS ZERO switch on Indicator Control panel to ZERO. After 20 seconds, return OPTICS ZERO switch to OFF.

4A. Set OPTICS MODE switch on Indicator Control panel to ZERO. After 20 seconds, return OPTICS MODE switch to MAN.

5. through 7. Deleted

8. Cover the SXT StLOS. Sight through the SXT LLOS and adjust the G&N Mounting Fixture until the single vertical reticle line is adjacent to the dot of target number 1.

9. Place the Variable Deviation Wedge (VDW) in front of target number 1 using the VDW base which allows deviation to be measured in the horizontal plane (setting knob points right). Set the VDW dial to zero.

NOTE: Step 10 applies to Indicator Control panel 2021290 only. Step 10A applies to all Indicator Control panels except 2021290.

10. Set OPTICS MODE switch to CMC and perform the following DSKY operations:

a. VERB 41 NOUN 55 ENTR

---

b. +27000 ENTR

c. +45000 ENTR

Wait until optics stop driving before proceeding.

10A. Set OPTICS MODE switch on Indicator Control panel to CGC and perform the following DSKY operations:

a. VERB 41 NOUN 55 ENTR

b. +27000 ENTR

c. +45000 ENTR

Wait until optics stop driving before proceeding.

11. Sight through the SXT LLOS and move the VDW laterally until the target number 1 reticle is seen clearly. Adjust the VDW dial until the central vertical reticle line of SXT is coincident with dot and vertical reticle line of target number 1. Record the VDW dial reading on line (g. 1). Complete line (g. 2). Uncover the SXT StLOS.

12. Complete lines (h), (i), (j), and (k) on the Data Sheet.

13. Place the VDW in front of target number 3 and cover target number 1.

14. Set the VDW to the value recorded on line (k).

NOTE: Step 15 applies to Indicator Control panel 2021290 only. Step 15A applies to all Indicator Control panels except 2021290.

15. Set OPTICS MODE switch on Indicator Control panel to MAN and set OPTICS SPEED switch to LO.

15A. Set OPTICS MODE switch on Indicator Control panel to MAN and set OPTICS CONTROLLER SPEED switch to LO.

16. Manipulate the Optics Hand Controller vertically to position the SXT StLOS until the central dot on reticle of target number 3 approaches the vertical crosshair on the SXT reticle. At the instant of coincidence, press MARK pushbutton.

NOTE: VERB 06, NOUN 56 shall appear on the CMC DSKY indicating optical CDU and time displays.

17. Record the DSKY Row 2 indication on line (l) of the Data Sheet. Repeat step 16 two more times, recording the DSKY Row 2 indication for each MARK.

18. Observe the three bit counts of line (l) of the Data Sheet. If two of the three counts are equal, record this count in line (m). If all three counts are different, record the count which falls between the smallest and the largest on line (m).

19. Complete lines (n) and (o) of the Data Sheet.

20. Set the VDW to the value recorded on line (o).

21. Manipulate the Optics Hand Controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 approaches the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

---

22. Record the DSKY Row 2 indication on line (p) of the Data Sheet. Repeat step 21 two more times, recording the DSKY Row 2 indication for each MARK.

23. Observe the three bit counts of line (p). If two of the three counts are equal, record this count on line (q). If all three counts are different, record the count which falls between the smallest and the largest on line (q).

24. Complete lines (r), (s), (t) and (u).

25. Set the VDW to the value recorded on line (u).

26. Manipulate the Optics Hand Controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 is approaching the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

27. Record the DSKY Row 2 indication on line (v). Repeat step 26 two more times, recording the DSKY Row 2 indication for each MARK.

28. Observe the three bit counts of line (v). If two of the three counts are equal, record this count on line (w). If all three counts are different, record the count which falls between the smallest and the largest on line (w).

29. Complete lines (x), (y), (z) and (aa).

30. Set the VDW to the value recorded on line (aa).

31. Manipulate the Optics Hand Controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 is approaching the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

32. Record the DSKY Row 2 indication on line (ab). Repeat step 31 two more times, recording the DSKY Row 2 indication for each MARK.

33. Observe the three bit counts of line (ab). If two of the three counts are equal, record this count on line (ac). If all three counts are different, record the count which falls between the smallest and the largest on line (ac).

34. Complete lines (ad), (ae), (af) and (ag).

35. Set the VDW to the value recorded on line (ag).

36. Manipulate the Optics Hand Controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 is approaching the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

37. Record the DSKY Row 2 indication on line (ah). Repeat step 36 two more times, recording the DSKY Row 2 indication for each MARK.

38. Observe the three bit counts on line (ah). If two of the three counts are equal, record this count on line (ai). If all three counts are different, record the count which falls between the smallest and the largest on line (ai).

39. Complete lines (aj), (ak), (al) and (am).

40. Set the VDW to the value recorded on line (am).

41. Manipulate the Optics Hand Controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 is approaching the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

42. Record the DSKY Row 2 indication on line (an). Repeat step 41 two more times, recording the DSKY Row 2 indication for each MARK.

43. Observe the three bit counts on line (an). If two of the three counts are equal, record this count on line (ao). If all three counts are different, record the count which falls between the smallest and the largest on line (ao).

44. Complete lines (ap), (aq), (ar) and (as).

45. Set the VDW to the value recorded on line (as).

46. Manipulate the Optics Hand Controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 is approaching the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

47. Record the DSKY Row 2 indication on line (at). Repeat step 46 two more times, recording the DSKY Row 2 indication for each MARK.

48. Observe the three bit counts on line (at). If two of the three counts are equal, record this count on line (au). If all three counts are different, record the count which falls between the smallest and the largest on line (au).

49. Complete lines (av) and (aw).

49A. Using Optics Hand Controller, position the SXT Trunnion between 0^o and 10^o as indicated by the Trunnion TPAC.

NOTE: Step 50 applies to Indicator Control panel 2021290 only. Step 50A applies to all Indicator Control panels except 2021290.

50. Set OPTICS ZERO switch on Indicator Control panel to ZERO. After approximately 20 seconds, set OPTICS ZERO switch to OFF.

50A. Set OPTICS MODE switch on Indicator Control panel to ZERO. After approximately 20 seconds, set OPTICS MODE switch to MAN.

NOTE: Step 51 applies to Indicator Control panel 2021290 only. Step 51A applies to all Indicator Control panels except 2021290.

51. Set OPTICS SPEED switch to HI and, using Optics Hand Controller, drive SXT until Shaft TPAC indicates approximately +27000. Return OPTICS SPEED switch to LO and manipulate Optics Hand Controller to fine position and hold SXT so Shaft TPAC indicates +27000.

51A. Set OPTICS CONTROLLER SPEED switch to HI and, using Optics Hand Controller, drive SXT until Shaft TPAC indicates approximately +27000. Return OPTICS CONTROLLER SPEED switch to LO and manipulate Optics Hand Controller to fine position and hold SXT so Shaft TPAC indicates +27000.

52. Insure that the horizontal reticle line of the SCT is coincident with the horizontal reticle line of target number 2 by adjusting the G & N Mounting Fixture cradle.

NOTE: Step 53 applies to Indicator Control panel 2021290 only. Step 53A applies to all Indicator Control panels except 2021290.

53. Set OPTICS ZERO switch on Indicator Control panel to ZERO. After approximately 20 seconds, set OPTICS ZERO switch to OFF. Set OPTICS TEL TRUN switch to 25^o. The target number 2 reticle pattern shall appear to intersect the number 0 on the SCT vertical reticle line.

53A. Set OPTICS MODE switch on Indicator Control panel to ZERO. After approximately 20 seconds, set OPTICS MODE switch to MAN. Set OPTICS TELESCOPE TRUNNION switch to 25^o. The target number 2 reticle pattern shall appear to intersect the number 0 on the SCT vertical reticle line.

NOTE: Step 54 applies to Indicator Control panel 2021290 only. Step 54A applies to all Indicator Control panels except 2021290.

54. Set OPTICS TEL TRUN switch to 0^o. The target number 2 reticle pattern shall appear to intersect the center of the SCT reticle pattern.

54A. Set OPTICS TELESCOPE TRUNNION switch to 0^o. The target number 2 reticle pattern shall appear to intersect the center of the SCT reticle pattern.

NOTE: Step 55 applies to Indicator Control panel 2021290 only. Step 55A applies to all Indicator Control panels except 2021290.

55. Set OPTICS TEL TRUN switch to SLAVE TO SXT.

55A. Set OPTICS TELESCOPE TRUNNION switch to SLAVE TO SXT.

NOTE: Step 56 applies to Indicator Control panel 2021290. Step 56A applies to all Indicator Control panels except 2021290.

56. Set OPTICS ZERO switch to ZERO. After approximately 20 seconds, set OPTICS ZERO switch to OFF.

56A. Set OPTICS MODE switch to ZERO. After approximately 20 seconds, set OPTICS MODE switch to MAN.

NOTE: Step 57 applies to Indicator Control panel 2021290 only. Step 57A applies to all Indicator Control panels except 2021290.

57. Set OPTICS SPEED switch to HI and, using Optics Hand Controller, drive SXT until Shaft TPAC indicates approximately +27000. Set OPTICS SPEED switch to LO and manipulate Optics Hand Controller to fine position and hold SXT so that Shaft TPAC indicates +27000.

57A. Set OPTICS CONTROLLER SPEED switch to HI and, using Optics Hand Controller, drive SXT until Shaft TPAC indicates approximately +27000. Set OPTICS CONTROLLER SPEED switch to LO and manipulate Optics Hand Controller to fine position and hold SXT so that Shaft TPAC indicates +27000.

58. Insure the horizontal reticle line of the SCT is coincident with horizontal reticle line of target number 2 by adjusting the G & N Mounting Fixture cradle.

59. Sight through the SXT StLOS and, using the Optics Hand Controller, position the approximate center of the SXT StLOS reticle pattern to the number 10 resolution pattern of target number 1.

60. Sight through StLOS and LLOS and observe the number 10 and surrounding lines of target number 1 reticle. The number 10 and surrounding lines shall be clear and distinct. Record indication.

61. Position the SCT resolution card approximately 10 feet from the SCT trunnion axis.

62. Sight through the SCT LOS and, using the Optics Hand Controller, position the approximate center of the SCT LOS reticle pattern to the 3 min. resolution pattern of the resolution card.

63. Sight through the SCT and observe the number and surrounding lines on the resolution card. The number and surrounding lines shall be clear and distinct. Record indication.

64. Using Optics Hand Controller, position the SXT Trunnion between 0^o and 10^o as indicated by the Trunnion TPAC.

NOTE: Step 65 applies to Indicator Control panel 2021290 only. Step 65A applies to all Indicator Control panels except 2021290.

65. Set OPTICS ZERO switch to ZERO. After one minute, perform following DSKY operations:

a. VERB 06 NOUN 55 ENTR
b. Record Row 1 (Shaft Angle) and Row 2 (Trunnion LOS Angle) indications on lines (a) and (b) of the Data Sheet.

65A. Set OPTICS MODE switch to ZERO. After one minute, perform the following DSKY operations:

a. VERB 06 NOUN 55 ENTR
b. Record Row 1 (Shaft Angle) and Row 2 (Trunnion LOS Angle) indications on lines (a) and (b) of the Data Sheet.

66. Place the VDW in front of target number 1 using the VDW base which allows deviation to be measured in the vertical plane (setting knob points upward). Set VDW dial to zero.

67. Cover the SXT StLOS. Sight through the SXT LLOS and adjust the G & N Mounting Fixture until the horizontal reticle line of the SXT is coincident with the dot and horizontal reticle line of target number 1.

NOTE: If coincidence cannot be achieved in step 67 by adjusting the G & N Mounting Fixture, target number 1 may be adjusted in azimuth as necessary to achieve coincidence.

68. Sight through the SXT LLOS and move the VDW laterally until target number 1 reticle is seen clearly. Adjust the VDW dial until the central horizontal reticle line of SXT is coincident with dot and horizontal reticle line of target number 1. Record the VDW reading on line (c). Uncover the SXT StLOS.

NOTE: If the value obtained for line (g) in step 69 is not within tolerance, perform the alternate procedure given in steps 72 through 80 to verify that an out-of-tolerance condition exists.

69. Cover the SXT LLOS. Sight through the SXT StLOS and adjust the VDW dial until the central horizontal reticle line of SXT is coincident with the dot and horizontal reticle line of target number 1. Record the VDW reading on line (e). Complete lines (d), (f), and (g). Uncover SXT LLOS.

NOTE: Step 70 applies to Indicator Control panel 2021290 only. Step 70A applies to all Indicator Control panels except 2021290.

70. Set OPTICS ZERO switch on Indicator Control panel to OFF.

70A. Set OPTICS MODE switch on Indicator Control panel to MAN.

71. Press OPTICS POWER ON pushbutton on Test Control panel. OPTICS POWER ON pushbutton shall go out.

ALTERNATE SXT LOS PARALLELISM PROCEDURE

72. Place the theodolite in a line coincident with the SXT LLOS and cover the SXT StLOS.

JOB OPTICS POSITIONAL ACCURACY TEST | JDC 12214 REV T PAGE 9 OF 9

SUBSYSTEM G & N SYSTEM | ASSY

73. Level theodolite base to the plate spirit level and level the altitude spirit level. Adjust the telescope focus to infinity. Set telescope to approximately 90°. Install the portable light assembly and adapter in the SXT eyepiece assembly. While observing the theodolite image, adjust the G & N Mounting Fixture until the SXT reticle is superimposed on the theodolite horizontal filar.

74. Align the theodolite horizontal filar to the SXT reticle and record the vertical angle.

75. Reverse and plunge the theodolite telescope and repeat step 74.

76. Repeat steps 74 and 75 for seven additional pairs of readings. After each time that step 75 is completed, drive the theodolite elevation off prior to realigning to the SXT reticle.

77. Place the theodolite in a line coincident with the SXT StLOS and cover the SXT LLOS.

78. Repeat step 73.

79. Repeat steps 74, 75, and 76.

80. Complete calculations for SXT StLOS to LLOS parallelism error.

JDC 19128

IMPORTANT See below.

INTERVAL

TOOLS AND MATERIAL Variable Deviation Wedge
SCT Resolution Card

IMPORTANT: 1. Insure that JDC 19128 has been performed within the last six months.
2. Avoid slewing of SXT shaft and trunnion axes into their mechanical stops.
3. If a Fresh Start (VERB 36 ENTR) is performed at any time during performance of this JDC, set OPTICS ZERO switch (Indicator Control panel 2021290) to OFF and then to ON and wait 18 seconds before proceeding; or set OPTICS MODE switch (all Indicator Control panels except 2021290) to MAN and then to ZERO and wait 18 seconds before proceeding.

NOTE: 1. Perform JDC 12215 to establish a Master Initialization condition. Place the G & N Mounting Fixture in the 0.0° position immediately after the IMU is coarse aligned to zero degree. 2. Step 1 applies to Indicator Control panel 2021290 only. Step 1A applies to all Indicator Control panels except 2021290.

VERIFICATION WITH SIDL REQUIRED BEFORE USE

DATE 30 JUN 66

FCR 4 0143A
Chg. 3-8-66

JOB OPTICS POSITIONAL ACCURACY TEST | JDC 12214 REV U PAGE 2 OF 9

SUBSYSTEM G & N SYSTEM | ASSY

1. Press OPTICS POWER ON pushbutton on Test Control panel. OPTICS POWER ON pushbutton shall light. Insure that OPTICS TEL TRUN switch on Indicator Control panel is set to SLAVE TO SXT and the OPTICS ZERO switch is set to OFF. Press RSET pushbutton on DSKY and ALARM RESET pushbutton on Programmer and Monitor panel of CTS to reset alarms which may occur.

1A. Press OPTICS POWER ON pushbutton on Test Control panel. OPTICS POWER ON pushbutton shall light. Insure that OPTICS TELESCOPE TRUNNION switch on Indicator Control panel is set to SLAVE TO SXT and that OPTICS TRACKER switch is set to OFF. Press RSET pushbutton on DSKY and ALARM RESET pushbutton on Programmer and Monitor panel of CTS to reset alarms which may occur.

NOTE: Step 2 applies to Indicator Control panel 2021290 only. Step 2A applies to all Indicator Control panels except 2021290.

2. Set OPTICS COUPLING switch to DIRECT and set OPTICS SPEED switch to HI.

2A. Set OPTICS CONTROLLER COUPLING switch to DIRECT and set OPTICS CONTROLLER SPEED switch to HI.

3. Place OPTICS MODE switch on the Indicator Control panel to MAN.

NOTE: Step 4 applies to Indicator Control panel 2021290 only. Step 4A applies to all Indicator Control panels except 2021290.

4. Set OPTICS ZERO switch on Indicator Control panel to ZERO. After 20 seconds, return OPTICS ZERO switch to OFF.

4A. Set OPTICS MODE switch on Indicator Control panel to ZERO. After 20 seconds, return OPTICS MODE switch to MAN.

5. through 7. Deleted

8. Cover the SXT StLOS. Sight through the SXT LLOS and adjust the G&N Mounting Fixture until the single vertical reticle line is adjacent to the dot of target number 1.

9. Place the Variable Deviation Wedge (VDW) in front of target number 1 using the VDW base which allows deviation to be measured in the horizontal plane (setting knob points right). Set the VDW dial to zero.

NOTE: Step 10 applies to Indicator Control panel 2021290 only. Step 10A applies to all Indicator Control panels except 2021290.

10. Set OPTICS MODE switch to CMC and perform the following DSKY operations:

a. VERB 41 NOUN 55 ENTR

DATE 30 JUN 66

JOB OPTICS POSITIONAL ACCURACY TEST | JDC 12214 REV U PAGE 3 OF 9

SUBSYSTEM G & N SYSTEM | ASSY

b. +27000 ENTR
c. +45000 ENTR

Wait until optics stop driving before proceeding.

10A. Set OPTICS MODE switch on Indicator Control panel to CGC and perform the following DSKY operations:

a. VERB 41 NOUN 55 ENTR
b. +27000 ENTR
c. +45000 ENTR

Wait until optics stop driving before proceeding.

11. Sight through the SXT LLOS and move the VDW laterally until the target number 1 reticle is seen clearly. Adjust the VDW dial until the central vertical reticle line of SXT is coincident with dot and vertical reticle line of target number 1. Record the VDW dial reading on line (g. 1). Complete line (g. 2). Uncover the SXT StLOS.

12. Complete lines (h), (i), (j), and (k) on the Data Sheet.

13. Place the VDW in front of target number 3 and cover target number 1.

14. Set the VDW to the value recorded on line (k).

NOTE: Step 15 applies to Indicator Control panel 2021290 only. Step 15A applies to all Indicator Control panels except 2021290.

15. Set OPTICS MODE switch on Indicator Control panel to MAN and set OPTICS SPEED switch to LO.

15A. Set OPTICS MODE switch on Indicator Control panel to MAN and set OPTICS CONTROLLER SPEED switch to LO.

16. Manipulate the Optics Hand Controller vertically to position the SXT StLOS until the central dot on reticle of target number 3 approaches the vertical crosshair on the SXT reticle. At the instant of coincidence, press MARK pushbutton.

NOTE: VERB 06, NOUN 56 shall appear on the CMC DSKY indicating optical CDU and time displays.

17. Record the DSKY Row 2 indication on line (1) of the Data Sheet. Repeat step 16 two more times, recording the DSKY Row 2 indication for each MARK.

18. Observe the three bit counts of line (1) of the Data Sheet. If two of the three counts are equal, record this count in line (m). If all three counts are different, record the count which falls between the smallest and the largest on line (m).

19. Complete lines (n) and (o) of the Data Sheet.

20. Set the VDW to the value recorded on line (o).

21. Manipulate the Optics Hand Controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 approaches the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

DATE 30 JUN 66

JOB OPTICS POSITIONAL ACCURACY TEST | JDC 12214 REV U PAGE 4 OF 9

SUBSYSTEM G & N SYSTEM | ASSY

22. Record the DSKY Row 2 indication on line (p) of the Data Sheet. Repeat step 21 two more times, recording the DSKY Row 2 indication for each MARK.

23. Observe the three bit counts of line (p). If two of the three counts are equal, record this count on line (q). If all three counts are different, record the count which falls between the smallest and the largest on line (q).

24. Complete lines (r), (s), (t) and (u).

25. Set the VDW to the value recorded on line (u).

26. Manipulate the Optics Hand Controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 is approaching the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

27. Record the DSKY Row 2 indication on line (v). Repeat step 26 two more times, recording the DSKY Row 2 indication for each MARK.

28. Observe the three bit counts of line (v). If two of the three counts are equal, record this count on line (w). If all three counts are different, record the count which falls between the smallest and the largest on line (w).

29. Complete lines (x), (y), (z) and (aa).

30. Set the VDW to the value recorded on line (aa).

31. Manipulate the Optics Hand Controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 is approaching the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

32. Record the DSKY Row 2 indication on line (ab). Repeat step 31 two more times, recording the DSKY Row 2 indication for each MARK.

33. Observe the three bit counts of line (ab). If two of the three counts are equal, record this count on line (ac). If all three counts are different, record the count which falls between the smallest and the largest on line (ac).

34. Complete lines (ad), (ae), (af) and (ag).

35. Set the VDW to the value recorded on line (ag).

36. Manipulate the Optics Hand Controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 is approaching the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

37. Record the DSKY Row 2 indication on line (ah). Repeat step 36 two more times, recording the DSKY Row 2 indication for each MARK.

38. Observe the three bit counts on line (ah). If two of the three counts are equal, record this count on line (ai). If all three counts are different, record the count which falls between the smallest and the largest on line (ai).

39. Complete lines (aj), (ak), (al) and (am).

DATE 30 JUN 66

40. Set the VDW to the value recorded on line (am).

41. Manipulate the Optics Hand Controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 is approaching the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

42. Record the DSKY Row 2 indication on line (an). Repeat step 41 two more times, recording the DSKY Row 2 indication for each MARK.

43. Observe the three bit counts on line (an). If two of the three counts are equal, record this count on line (ao). If all three counts are different, record the count which falls between the smallest and the largest on line (ao).

44. Complete lines (ap), (aq), (ar) and (as).

45. Set the VDW to the value recorded on line (as).

46. Manipulate the Optics Hand Controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 is approaching the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

47. Record the DSKY Row 2 indication on line (at). Repeat step 46 two more times, recording the DSKY Row 2 indication for each MARK.

48. Observe the three bit counts on line (at). If two of the three counts are equal, record this count on line (au). If all three counts are different, record the count which falls between the smallest and the largest on line (au).

49. Complete lines (av) and (aw).

49A. Using Optics Hand Controller, position the SXT Trunnion between 0° and 10° as indicated by the Trunnion TPAC.

NOTE: Step 50 applies to Indicator Control panel 2021290 only. Step 50A applies to all Indicator Control panels except 2021290.

50. Set OPTICS ZERO switch on Indicator Control panel to ZERO. After approximately 20 seconds, set OPTICS ZERO switch to OFF.

50A. Set OPTICS MODE switch on Indicator Control panel to ZERO. After approximately 20 seconds, set OPTICS MODE switch to MAN.

NOTE: Step 51 applies to Indicator Control panel 2021290 only. Step 51A applies to all Indicator Control panels except 2021290.

51. Set OPTICS SPEED switch to HI and, using Optics Hand Controller, drive SXT until Shaft TPAC indicates approximately +27000. Return OPTICS SPEED switch to LO and manipulate Optics Hand Controller to fine position and hold SXT so Shaft TPAC indicates +27000.

51A. Set OPTICS CONTROLLER SPEED switch to HI and, using Optics Hand Controller, drive SXT until Shaft TPAC indicates approximately +27000. Return OPTICS CONTROLLER SPEED switch to LO and manipulate Optics Hand Controller to fine position and hold SXT so Shaft TPAC indicates +27000.

52. Insure that the horizontal reticle line of the SCT is coincident with the horizontal reticle line of target number 2 by adjusting the G & N Mounting Fixture cradle.

NOTE: Step 53 applies to Indicator Control panel 2021290 only. Step 53A applies to all Indicator Control panels except 2021290.

53. Set OPTICS ZERO switch on Indicator Control panel to ZERO. After approximately 20 seconds, set OPTICS ZERO switch to OFF. Set OPTICS TEL TRUN switch to 25°. The target number 2 reticle pattern shall appear to intersect the number 0 on the SCT vertical reticle line.

53A. Set OPTICS MODE switch on Indicator Control panel to ZERO. After approximately 20 seconds, set OPTICS MODE switch to MAN. Set OPTICS TELESCOPE TRUNNION switch to 25°. The target number 2 reticle pattern shall appear to intersect the number 0 on the SCT vertical reticle line.

NOTE: Step 54 applies to Indicator Control panel 2021290 only. Step 54A applies to all Indicator Control panels except 2021290.

54. Set OPTICS TEL TRUN switch to 0°. The target number 2 reticle pattern shall appear to intersect the center of the SCT reticle pattern.

54A. Set OPTICS TELESCOPE TRUNNION switch to 0°. The target number 2 reticle pattern shall appear to intersect the center of the SCT reticle pattern.

NOTE: Step 55 applies to Indicator Control panel 2021290 only. Step 55A applies to all Indicator Control panels except 2021290.

55. Set OPTICS TEL TRUN switch to SLAVE TO SXT.

55A. Set OPTICS TELESCOPE TRUNNION switch to SLAVE TO SXT.

NOTE: Step 56 applies to Indicator Control panel 2021290. Step 56A applies to all Indicator Control panels except 2021290.

56. Set OPTICS ZERO switch to ZERO. After approximately 20 seconds, set OPTICS ZERO switch to OFF.

56A. Set OPTICS MODE switch to ZERO. After approximately 20 seconds, set OPTICS MODE switch to MAN.

NOTE: Step 57 applies to Indicator Control panel 2021290 only. Step 57A applies to all Indicator Control panels except 2021290.

57. Set OPTICS SPEED switch to HI and, using Optics Hand Controller, drive SXT until Shaft TPAC indicates approximately +27000. Set OPTICS SPEED switch to LO and manipulate Optics Hand Controller to fine position and hold SXT so that Shaft TPAC indicates +27000.

57A. Set OPTICS CONTROLLER SPEED switch to HI and, using Optics Hand Controller, drive SXT until Shaft TPAC indicates approximately +27000. Set OPTICS CONTROLLER SPEED switch to LO and manipulate Optics Hand Controller to fine position and hold SXT so that Shaft TPAC indicates +27000.

58. Insure the horizontal reticle line of the SCT is coincident with horizontal reticle line of target number 2 by adjusting the G & N Mounting Fixture cradle.

59. Sight through the SXT StLOS and, using the Optics Hand Controller, position the approximate center of the SXT StLOS reticle pattern to the number 10 resolution pattern of target number 1.

60. Sight through StLOS and LLOS and observe the number 10 and surrounding lines of target number 1 reticle. The number 10 and surrounding lines shall be clear and distinct. Record indication.

61. Position the SCT resolution card approximately 10 feet from the SCT trunnion axis.

62. Sight through the SCT LOS and, using the Optics Hand Controller, position the approximate center of the SCT LOS reticle pattern to the 3 min. resolution pattern of the resolution card.

63. Sight through the SCT and observe the number and surrounding lines on the resolution card. The number and surrounding lines shall be clear and distinct. Record indication.

64. Using Optics Hand Controller, position the SXT Trunnion between 0° and 10° as indicated by the Trunnion TPAC.

NOTE: Step 65 applies to Indicator Control panel 2021290 only. Step 65A applies to all Indicator Control panels except 2021290.

65. Set OPTICS ZERO switch to ZERO. After one minute, perform following DSKY operations:

a. VERB 06 NOUN 55 ENTR
b. Record Row 1 (Shaft Angle) and Row 2 (Trunnion LOS Angle) indications on lines (a) and (b) of the Data Sheet.

65A. Set OPTICS MODE switch to ZERO. After one minute, perform the following DSKY operations:

a. VERB 06 NOUN 55 ENTR
b. Record Row 1 (Shaft Angle) and Row 2 (Trunnion LOS Angle) indications on lines (a) and (b) of the Data Sheet.

66. Place the VDW in front of target number 1 using the VDW base which allows deviation to be measured in the vertical plane (setting knob points upward). Set VDW dial to zero.

67. Cover the SXT StLOS. Sight through the SXT LLOS and adjust the G & N Mounting Fixture until the horizontal reticle line of the SXT is coincident with the dot and horizontal reticle line of target number 1.

NOTE: If coincidence cannot be achieved in step 67 by adjusting the G & N Mounting Fixture, target number 1 may be adjusted in azimuth as necessary to achieve coincidence.

68. Sight through the SXT LLOS and move the VDW laterally until target number 1 reticle is seen clearly. Adjust the VDW dial until the central horizontal reticle line of SXT is coincident with dot and horizontal reticle line of target number 1. Record the VDW reading on line (c). Uncover the SXT StLOS.

NOTE: If the value obtained for line (g) in step 69 is not within tolerance, perform the alternate procedure given in steps 72 through 80 to verify that an out-of-tolerance condition exists.

69. Cover the SXT LLOS. Sight through the SXT StLOS and adjust the VDW dial until the central horizontal reticle line of SXT is coincident with the dot and horizontal reticle line of target number 1. Record the VDW reading on line (e). Complete lines (d), (f), and (g). Uncover SXT LLOS.

NOTE: Step 70 applies to Indicator Control panel 2021290 only. Step 70A applies to all Indicator Control panels except 2021290.

70. Set OPTICS ZERO switch on Indicator Control panel to OFF.

70A. Set OPTICS MODE switch on Indicator Control panel to MAN.

71. Press OPTICS POWER ON pushbutton on Test Control panel. OPTICS POWER ON pushbutton shall go out.

ALTERNATE SXT LOS PARALLELISM PROCEDURE

72. Place the theodolite in a line coincident with the SXT LLOS and cover the SXT StLOS.

JOB OPTICS POSITIONAL ACCURACY TEST | JDC 12214 REV U PAGE 9 OF 9

SUBSYSTEM G & N SYSTEM | ASSY

73. Level theodolite base to the plate spirit level and level the altitude spirit level. Adjust the telescope focus to infinity. Set telescope to approximately 90 . Install the portable light assembly and adapter in the SXT eyepiece assembly. While observing the theodolite image, adjust the G & N Mounting Fixture until the SXT reticle is superimposed on the theodolite horizontal filar.

74. Align the theodolite horizontal filar to the SXT reticle and record the vertical angle.

75. Reverse and plunge the theodolite telescope and repeat step 74.

76. Repeat steps 74 and 75 for seven additional pairs of readings. After each time that step 75 is completed, drive the theodolite elevation off prior to realigning to the SXT reticle.

77. Place the theodolite in a line coincident with the SXT StLOS and cover the SXT LLOS.

78. Repeat step 73.

79. Repeat steps 74, 75, and 76.

80. Complete calculations for SXT StLOS to LLOS parallelism error.

IMPORTANT See below.

INTERVAL

TOOLS AND MATERIAL Variable Deviation Wedge
SCT Resolution Card

IMPORTANT: 1. Insure that JDC 19128 has been performed within the last six months.
2. Avoid slewing of SXT shaft and trunnion axes into their mechanical stops.
3. If a Fresh Start (VERB 36 ENTR) is performed at any time during performance of this JDC, set OPTICS ZERO switch (Indicator Control panel 2021290) to OFF and then to ON and wait 18 seconds before proceeding; or set OPTICS MODE switch (all Indicator Control panels except 2021290) to MAN and then to ZERO and wait 18 seconds before proceeding.

NOTE: 1. Perform JDC 12215 to establish a Master Initialization condition. Place the G & N Mounting Fixture in the 0.0° position immediately after the IMU is coarse aligned to zero degree. 2. Step 1 applies to Indicator Control panel 2021290 only. Step 1A applies to all Indicator Control panels except 2021290.

VERIFICATION WITH SIDL REQUIRED BEFORE USE

DATE 30 JUN 66

FCR 1.0-143A
Chg. 3-18-66

---

1. Press OPTICS POWER ON pushbutton on Test Control panel. OPTICS POWER ON pushbutton shall light. Insure that OPTICS TEL TRUN switch on Indicator Control panel is set to SLAVE TO SXT and the OPTICS ZERO switch is set to OFF. Press RSET pushbutton on DSKY and ALARM RESET pushbutton on Programmer and Monitor panel of CTS to reset alarms which may occur.

1A. Press OPTICS POWER ON pushbutton on Test Control panel. OPTICS POWER ON pushbutton shall light. Insure that OPTICS TELESCOPE TRUNNION switch on Indicator Control panel is set to SLAVE TO SXT and that OPTICS TRACKER switch is set to OFF. Press RSET pushbutton on DSKY and ALARM RESET pushbutton on Programmer and Monitor panel of CTS to reset alarms which may occur.

NOTE: Step 2 applies to Indicator Control panel 2021290 only. Step 2A applies to all Indicator Control panels except 2021290.

2. Set OPTICS COUPLING switch to DIRECT and set OPTICS SPEED switch to HI.

2A. Set OPTICS CONTROLLER COUPLING switch to DIRECT and set OPTICS CONTROLLER SPEED switch to HI.

3. Place OPTICS MODE switch on the Indicator Control panel to MAN.

NOTE: Step 4 applies to Indicator Control panel 2021290 only. Step 4A applies to all Indicator Control panels except 2021290.

4. Set OPTICS ZERO switch on Indicator Control panel to ZERO. After 20 seconds, return OPTICS ZERO switch to OFF.

4A. Set OPTICS MODE switch on Indicator Control panel to ZERO. After 20 seconds, return OPTICS MODE switch to MAN.

5. through 7. Deleted

8. Cover the SXT StLOS. Sight through the SXT LLOS and adjust the G&N Mounting Fixture until the dot of target number 1 is horizontally adjacent to the double vertical lines of the SXT reticle.

9. Place the Variable Deviation Wedge (VDW) in front of target number 1 using the VDW base which allows deviation to be measured in the horizontal plane (setting knob points right). Set the VDW dial to zero.

NOTE: Step 10 applies to Indicator Control panel 2021290 only. Step 10A applies to all Indicator Control panels except 2021290.

10. Set OPTICS MODE switch to CMC and perform the following DSKY operations:
a. VERB 41 NOUN 55 ENTR

---

b. +27000 ENTR
c. +45000 ENTR

Wait until optics stop driving before proceeding.

10A. Set OPTICS MODE switch on Indicator Control panel to CGC and perform the following DSKY operations:
a. VERB 41 NOUN 55 ENTR
b. +27000 ENTR
c. +45000 ENTR

Wait until optics stop driving before proceeding.

11. Sight through the SXT LLOS and move the VDW laterally until the target number 1 reticle is seen clearly. Adjust the VDW dial until the central vertical reticle line of SXT is coincident with dot and vertical reticle line of target number 1. Record the VDW dial reading on line (g.1). Complete line (g.2). Uncover the SXT StLOS.

12. Complete lines (h), (i), (j), and (k) on the Data Sheet.

13. Place the VDW in front of target number 3 and cover target number 1.

14. Set the VDW to the value recorded on line (k).

NOTE: Step 15 applies to Indicator Control panel 2021290 only. Step 15A applies to all Indicator Control panels except 2021290.

15. Set OPTICS MODE switch on Indicator Control panel to MAN and set OPTICS SPEED switch to LO.

15A. Set OPTICS MODE switch on Indicator Control panel to MAN and set OPTICS CONTROLLER SPEED switch to LO.

16. Manipulate the Optics Hand Controller vertically to position the SXT StLOS until the central dot on reticle of target number 3 approaches the vertical crosshair on the SXT reticle. At the instant of coincidence, press MARK pushbutton.

NOTE: VERB 06, NOUN 56 shall appear on the CMC DSKY indicating optical CDU and time displays.

17. Record the DSKY Row 2 indication on line (1) of the Data Sheet. Repeat step 16 two more times, recording the DSKY Row 2 indication for each MARK.

18. Observe the three bit counts of line (1) of the Data Sheet. If two of the three counts are equal, record this count in line (m). If all three counts are different, record the count which falls between the smallest and the largest on line (m).

19. Complete lines (n) and (o) of the Data Sheet.

20. Set the VDW to the value recorded on line (o).

21. Manipulate the Optics Hand Controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 approaches the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

---

22. Record the DSKY Row 2 indication on line (p) of the Data Sheet. Repeat step 21 two more times, recording the DSKY Row 2 indication for each MARK.

23. Observe the three bit counts of line (p). If two of the three counts are equal, record this count on line (q). If all three counts are different, record the count which falls between the smallest and the largest on line (q).

24. Complete lines (r), (s), (t) and (u).

25. Set the VDW to the value recorded on line (u).

26. Manipulate the Optics Hand Controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 is approaching the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

27. Record the DSKY Row 2 indication on line (v). Repeat step 26 two more times, recording the DSKY Row 2 indication for each MARK.

28. Observe the three bit counts of line (v). If two of the three counts are equal, record this count on line (w). If all three counts are different, record the count which falls between the smallest and the largest on line (w).

29. Complete lines (x), (y), (z) and (aa).

30. Set the VDW to the value recorded on line (aa).

31. Manipulate the Optics Hand Controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 is approaching the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

32. Record the DSKY Row 2 indication on line (ab). Repeat step 31 two more times, recording the DSKY Row 2 indication for each MARK.

33. Observe the three bit counts of line (ab). If two of the three counts are equal, record this count on line (ac). If all three counts are different, record the count which falls between the smallest and the largest on line (ac).

34. Complete lines (ad), (ae), (af) and (ag).

35. Set the VDW to the value recorded on line (ag).

36. Manipulate the Optics Hand Controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 is approaching the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

37. Record the DSKY Row 2 indication on line (ah). Repeat step 36 two more times, recording the DSKY Row 2 indication for each MARK.

38. Observe the three bit counts on line (ah). If two of the three counts are equal, record this count on line (ai). If all three counts are different, record the count which falls between the smallest and the largest on line (ai).

39. Complete lines (aj), (ak), (al) and (am).

40. Set the VDW to the value recorded on line (am).

41. Manipulate the Optics Hand Controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 is approaching the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

42. Record the DSKY Row 2 indication on line (an). Repeat step 41 two more times, recording the DSKY Row 2 indication for each MARK.

43. Observe the three bit counts on line (an). If two of the three counts are equal, record this count on line (ao). If all three counts are different, record the count which falls between the smallest and the largest on line (ao).

44. Complete lines (ap), (aq), (ar) and (as).

45. Set the VDW to the value recorded on line (as).

46. Manipulate the Optics Hand Controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 is approaching the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

47. Record the DSKY Row 2 indication on line (at). Repeat step 46 two more times, recording the DSKY Row 2 indication for each MARK.

48. Observe the three bit counts on line (at). If two of the three counts are equal, record this count on line (au). If all three counts are different, record the count which falls between the smallest and the largest on line (au).

49. Complete lines (av) and (aw).

49A. Using Optics Hand Controller, position the SXT Trunnion between 0° and 10° as indicated by the Trunnion TPAC.

NOTE: Step 50 applies to Indicator Control panel 2021290 only. Step 50A applies to all Indicator Control panels except 2021290.

50. Set OPTICS ZERO switch on Indicator Control panel to ZERO. After approximately 20 seconds, set OPTICS ZERO switch to OFF.

50A. Set OPTICS MODE switch on Indicator Control panel to ZERO. After approximately 20 seconds, set OPTICS MODE switch to MAN.

NOTE: Step 51 applies to Indicator Control panel 2021290 only. Step 51A applies to all Indicator Control panels except 2021290.

51. Set OPTICS SPEED switch to HI and, using Optics Hand Controller, drive SXT until Shaft TPAC indicates approximately +27000. Return OPTICS SPEED switch to LO and manipulate Optics Hand Controller to fine position and hold SXT so Shaft TPAC indicates +27000.

51A. Set OPTICS CONTROLLER SPEED switch to HI and, using Optics Hand Controller, drive SXT until Shaft TPAC indicates approximately +27000. Return OPTICS CONTROLLER SPEED switch to LO and manipulate Optics Hand Controller to fine position and hold SXT so Shaft TPAC indicates +27000.

52. Insure that the horizontal reticle line of the SCT is coincident with the horizontal reticle line of target number 2 by adjusting the G & N Mounting Fixture cradle.

NOTE: Step 53 applies to Indicator Control panel 2021290 only. Step 53A applies to all Indicator Control panels except 2021290.

53. Set OPTICS ZERO switch on Indicator Control panel to ZERO. After approximately 20 seconds, set OPTICS ZERO switch to OFF. Set OPTICS TEL TRUN switch to 25°. The target number 2 reticle pattern shall appear to intersect the number 0 on the SCT vertical reticle line.

53A. Set OPTICS MODE switch on Indicator Control panel to ZERO. After approximately 20 seconds, set OPTICS MODE switch to MAN. Set OPTICS TELESCOPE TRUNNION switch to 25°. The target number 2 reticle pattern shall appear to intersect the number 0 on the SCT vertical reticle line.

NOTE: Step 54 applies to Indicator Control panel 2021290 only. Step 54A applies to all Indicator Control panels except 2021290.

54. Set OPTICS TEL TRUN switch to 0°. The target number 2 reticle pattern shall appear to intersect the center of the SCT reticle pattern.

54A. Set OPTICS TELESCOPE TRUNNION switch to 0°. The target number 2 reticle pattern shall appear to intersect the center of the SCT reticle pattern.

NOTE: Step 55 applies to Indicator Control panel 2021290 only. Step 55A applies to all Indicator Control panels except 2021290.

55. Set OPTICS TEL TRUN switch to SLAVE TO SXT.

55A. Set OPTICS TELESCOPE TRUNNION switch to SLAVE TO SXT.

NOTE: Step 56 applies to Indicator Control panel 2021290. Step 56A applies to all Indicator Control panels except 2021290.

56. Set OPTICS ZERO switch to ZERO. After approximately 20 seconds, set OPTICS ZERO switch to OFF.

56A. Set OPTICS MODE switch to ZERO. After approximately 20 seconds, set OPTICS MODE switch to MAN.

NOTE: Step 57 applies to Indicator Control panel 2021290 only. Step 57A applies to all Indicator Control panels except 2021290.

57. Set OPTICS SPEED switch to HI and, using Optics Hand Controller, drive SXT until Shaft TPAC indicates approximately +27000. Set OPTICS SPEED switch to LO and manipulate Optics Hand Controller to fine position and hold SXT so that Shaft TPAC indicates +27000.

57A. Set OPTICS CONTROLLER SPEED switch to HI and, using Optics Hand Controller, drive SXT until Shaft TPAC indicates approximately +27000. Set OPTICS CONTROLLER SPEED switch to LO and manipulate Optics Hand Controller to fine position and hold SXT so that Shaft TPAC indicates +27000.

58. Insure the horizontal reticle line of the SCT is coincident with horizontal reticle line of target number 2 by adjusting the G & N Mounting Fixture cradle.

59. Sight through the SXT StLOS and, using the Optics Hand Controller, position the approximate center of the SXT StLOS reticle pattern to the number 10 resolution pattern of target number 1.

60. Sight through StLOS and LLOS and observe the number 10 and surrounding lines of target number 1 reticle. The number 10 and surrounding lines shall be clear and distinct. Record indication.

61. Position the SCT resolution card approximately 10 feet from the SCT trunnion axis.

62. Sight through the SCT LOS and, using the Optics Hand Controller, position the approximate center of the SCT LOS reticle pattern to the 3 min. resolution pattern of the resolution card.

63. Sight through the SCT and observe the number and surrounding lines on the resolution card. The number and surrounding lines shall be clear and distinct. Record indication.

64. Using Optics Hand Controller, position the SXT Trunnion between 0° and 10° as indicated by the Trunnion TPAC.

NOTE: Step 65 applies to Indicator Control panel 2021290 only. Step 65A applies to all Indicator Control panels except 2021290.

65. Set OPTICS ZERO switch to ZERO. After one minute, perform following DSKY operations:

a. VERB 06 NOUN 55 ENTR
b. Record Row 1 (Shaft Angle) and Row 2 (Trunnion LOS Angle) indications on lines (a) and (b) of the Data Sheet.

65A. Set OPTICS MODE switch to ZERO. After one minute, perform the following DSKY operations:

a. VERB 06 NOUN 55 ENTR
b. Record Row 1 (Shaft Angle) and Row 2 (Trunnion LOS Angle) indications on lines (a) and (b) of the Data Sheet.

66. Place the VDW in front of target number 1 using the VDW base which allows deviation to be measured in the vertical plane (setting knob points upward). Set VDW dial to zero.

67. Cover the SXT StLOS. Sight through the SXT LLOS and adjust the G & N Mounting Fixture until the horizontal reticle line of the SXT is coincident with the dot and horizontal reticle line of target number 1.

NOTE: If coincidence cannot be achieved in step 67 by adjusting the G & N Mounting Fixture, target number 1 may be adjusted in azimuth as necessary to achieve coincidence.

68. Sight through the SXT LLOS and move the VDW laterally until target number 1 reticle is seen clearly. Adjust the VDW dial until the central horizontal reticle line of SXT is coincident with dot and horizontal reticle line of target number 1. Record the VDW reading on line (c). Uncover the SXT StLOS.

NOTE: If the value obtained for line (g) in step 69 is not within tolerance, perform the alternate procedure given in steps 72 through 80 to verify that an out-of-tolerance condition exists.

69. Cover the SXT LLOS. Sight through the SXT StLOS and adjust the VDW dial until the central horizontal reticle line of SXT is coincident with the dot and horizontal reticle line of target number 1. Record the VDW reading on line (e). Complete lines (d), (f), and (g). Uncover SXT LLOS.

NOTE: Step 70 applies to Indicator Control panel 2021290 only. Step 70A applies to all Indicator Control panels except 2021290.

70. Set OPTICS ZERO switch on Indicator Control panel to OFF.

70A. Set OPTICS MODE switch on Indicator Control panel to MAN.

71. Press OPTICS POWER ON pushbutton on Test Control panel. OPTICS POWER ON pushbutton shall go out.

ALTERNATE SXT LOS PARALLELISM PROCEDURE

72. Place the theodolite in a line coincident with the SXT LLOS and cover the SXT StLOS.

JOB OPTICS POSITIONAL ACCURACY TEST | JDC 12214 REV V PAGE 9 OF 9

SUBSYSTEM G & N SYSTEM | ASSY

73. Level theodolite base to the plate spirit level and level the altitude spirit level. Adjust the telescope focus to infinity. Set telescope to approximately 90°. Install the portable light assembly and adapter in the SXT eyepiece assembly. While observing the theodolite image, adjust the G & N Mounting Fixture until the SXT reticle is superimposed on the theodolite horizontal filar.

74. Align the theodolite horizontal filar to the SXT reticle and record the vertical angle.

75. Reverse and plunge the theodolite telescope and repeat step 74.

76. Repeat steps 74 and 75 for seven additional pairs of readings. After each time that step 75 is completed, drive the theodolite elevation off prior to realigning to the SXT reticle.

77. Place the theodolite in a line coincident with the SXT StLOS and cover the SXT LLOS.

78. Repeat step 73.

79. Repeat steps 74, 75, and 76.

80. Complete calculations for SXT StLOS to LLOS parallelism error.

JDC 19128

IMPORTANT See below.

INTERVAL

TOOLS AND MATERIAL Variable Deviation Wedge
SCT Resolution Card

IMPORTANT: 1. Insure that JDC 19128 has been performed within the last six months.
2. Avoid slewing of SXT shaft and trunnion axes into their mechanical stops.
3. If a Fresh Start (VERB 36 ENTR) is performed at any time during performance of this JDC, set OPTICS ZERO switch (Indicator Control panel 2021290) to OFF and then to ON and wait 18 seconds before proceeding; or set OPTICS MODE switch (all Indicator Control panels except 2021290) to MAN and then to ZERO and wait 18 seconds before proceeding.

CAUTION: Use extreme care when tilting G&N Mounting Fixture to insure that components do not strike cradle locking handles.

NOTE: 1. Perform JDC 12215 to establish a Master Initialization condition. Place the G & N Mounting Fixture in the 0.0° position immediately after the IMU is coarse aligned to zero

VERIFICATION WITH SIDL REQUIRED BEFORE USE

DATE 30 JUN 66

---

degree. 2. Step 1 applies to Indicator Control panel 2021290 only. Step 1A applies to all Indicator Control panels except 2021290.

1. Press OPTICS POWER ON pushbutton on Test Control panel. OPTICS POWER ON pushbutton shall light. Insure that OPTICS TEL TRUN switch on Indicator Control panel is set to SLAVE TO SXT and the OPTICS ZERO switch is set to OFF. Press RSET pushbutton on DSKY and ALARM RESET pushbutton on Programmer and Monitor panel of CTS to reset alarms which may occur.

1A. Press OPTICS POWER ON pushbutton on Test Control panel. OPTICS POWER ON pushbutton shall light. Insure that OPTICS TELESCOPE TRUNNION switch on Indicator Control panel is set to SLAVE TO SXT and that OPTICS TRACKER switch is set to OFF. Press RSET pushbutton on DSKY and ALARM RESET pushbutton on Programmer and Monitor panel of CTS to reset alarms which may occur.

NOTE: Step 2 applies to Indicator Control panel 2021290 only. Step 2A applies to all Indicator Control panels except 2021290.

2. Set OPTICS COUPLING switch to DIRECT and set OPTICS SPEED switch to HI.

2A. Set OPTICS CONTROLLER COUPLING switch to DIRECT and set OPTICS CONTROLLER SPEED switch to HI.

3. Place OPTICS MODE switch on the Indicator Control panel to MAN.

NOTE: Step 4 applies to Indicator Control panel 2021290 only. Step 4A applies to all Indicator Control panels except 2021290.

4. Set OPTICS ZERO switch on Indicator Control panel to ZERO. After 20 seconds, return OPTICS ZERO switch to OFF.

4A. Set OPTICS MODE switch on Indicator Control panel to ZERO. After 20 seconds, return OPTICS MODE switch to MAN.

5. through 7. Deleted

8. Cover the SXT StLOS. Sight through the SXT LLOS and adjust the G&N Mounting Fixture until the dot of target number 1 is horizontally adjacent to the double vertical lines of the SXT reticle.

9. Place the Variable Deviation Wedge (VDW) in front of target number 1 using the VDW base which allows deviation to be measured in the horizontal plane (setting knob points right). Set the VDW dial to zero.

NOTE: Step 10 applies to Indicator Control panel 2021290 only. Step 10A applies to all Indicator Control panels except 2021290.

10. Set OPTICS MODE switch to CMC and perform the following DSKY operations:

---

a. VERB 41 NOUN 55 ENTR
b. +27000 ENTR
c. +45000 ENTR

Wait until optics stop driving before proceeding.

10A. Set OPTICS MODE switch on Indicator Control panel to CGC and perform the following DSKY operations:

a. VERB 41 NOUN 55 ENTR
b. +27000 ENTR
c. +45000 ENTR

Wait until optics stop driving before proceeding.

11. Sight through the SXT LLOS and move the VDW laterally until the target number 1 reticle is seen clearly. Adjust the VDW dial until the central vertical reticle line of SXT is coincident with dot and vertical reticle line of target number 1. Record the VDW dial reading on line (g. 1). Complete line (g. 2). Uncover the SXT StLOS.

12. Complete lines (h), (i), (j), and (k) on the Data Sheet.

13. Place the VDW in front of target number 3 and cover target number 1.

14. Set the VDW to the value recorded on line (k).

NOTE: Step 15 applies to Indicator Control panel 2021290 only. Step 15A applies to all Indicator Control panels except 2021290.

15. Set OPTICS MODE switch on Indicator Control panel to MAN and set OPTICS SPEED switch to LO.

15A. Set OPTICS MODE switch on Indicator Control panel to MAN and set OPTICS CONTROLLER SPEED switch to LO.

16. Manipulate the Optics Hand Controller vertically to position the SXT StLOS until the central dot on reticle of target number 3 approaches the vertical crosshair on the SXT reticle. At the instant of coincidence, press MARK pushbutton.

NOTE: VERB 06, NOUN 56 shall appear on the CMC DSKY indicating optical CDU and time displays.

17. Record the DSKY Row 2 indication on line (l) of the Data Sheet. Repeat step 16 two more times, recording the DSKY Row 2 indication for each MARK.

18. Observe the three bit counts of line (l) of the Data Sheet. If two of the three counts are equal, record this count in line (m). If all three counts are different, record the count which falls between the smallest and the largest on line (m).

19. Complete lines (n) and (o) of the Data Sheet.

20. Set the VDW to the value recorded on line (o).

21. Manipulate the Optics Hand Controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 approaches the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

---

22. Record the DSKY Row 2 indication on line (p) of the Data Sheet. Repeat step 21 two more times, recording the DSKY Row 2 indication for each MARK.

23. Observe the three bit counts of line (p). If two of the three counts are equal, record this count on line (q). If all three counts are different, record the count which falls between the smallest and the largest on line (q).

24. Complete lines (r), (s), (t) and (u).

25. Set the VDW to the value recorded on line (u).

26. Manipulate the Optics Hand Controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 is approaching the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

27. Record the DSKY Row 2 indication on line (v). Repeat step 26 two more times, recording the DSKY Row 2 indication for each MARK.

28. Observe the three bit counts of line (v). If two of the three counts are equal, record this count on line (w). If all three counts are different, record the count which falls between the smallest and the largest on line (w).

29. Complete lines (x), (y), (z) and (aa).

30. Set the VDW to the value recorded on line (aa).

31. Manipulate the Optics Hand Controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 is approaching the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

32. Record the DSKY Row 2 indication on line (ab). Repeat step 31 two more times, recording the DSKY Row 2 indication for each MARK.

33. Observe the three bit counts of line (ab). If two of the three counts are equal, record this count on line (ac). If all three counts are different, record the count which falls between the smallest and the largest on line (ac).

34. Complete lines (ad), (ae), (af) and (ag).

35. Set the VDW to the value recorded on line (ag).

36. Manipulate the Optics Hand Controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 is approaching the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

37. Record the DSKY Row 2 indication on line (ah). Repeat step 36 two more times, recording the DSKY Row 2 indication for each MARK.

38. Observe the three bit counts on line (ah). If two of the three counts are equal, record this count on line (ai). If all three counts are different, record the count which falls between the smallest and the largest on line (ai).

39. Complete lines (aj), (ak), (al) and (am).

40. Set the VDW to the value recorded on line (am).

41. Manipulate the Optics Hand Controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 is approaching the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

42. Record the DSKY Row 2 indication on line (an). Repeat step 41 two more times, recording the DSKY Row 2 indication for each MARK.

43. Observe the three bit counts on line (an). If two of the three counts are equal, record this count on line (ao). If all three counts are different, record the count which falls between the smallest and the largest on line (ao).

44. Complete lines (ap), (aq), (ar) and (as).

45. Set the VDW to the value recorded on line (as).

46. Manipulate the Optics Hand Controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 is approaching the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

47. Record the DSKY Row 2 indication on line (at). Repeat step 46 two more times, recording the DSKY Row 2 indication for each MARK.

48. Observe the three bit counts on line (at). If two of the three counts are equal, record this count on line (au). If all three counts are different, record the count which falls between the smallest and the largest on line (au).

49. Complete lines (av) and (aw).

49A. Using Optics Hand Controller, position the SXT Trunnion between 0° and 10° as indicated by the Trunnion TPAC.

NOTE: Step 50 applies to Indicator Control panel 2021290 only. Step 50A applies to all Indicator Control panels except 2021290.

50. Set OPTICS ZERO switch on Indicator Control panel to ZERO. After approximately 20 seconds, set OPTICS ZERO switch to OFF.

50A. Set OPTICS MODE switch on Indicator Control panel to ZERO. After approximately 20 seconds, set OPTICS MODE switch to MAN.

NOTE: Step 51 applies to Indicator Control panel 2021290 only. Step 51A applies to all Indicator Control panels except 2021290.

51. Set OPTICS SPEED switch to HI and, using Optics Hand Controller, drive SXT until Shaft TPAC indicates approximately +27000. Return OPTICS SPEED switch to LO and manipulate Optics Hand Controller to fine position and hold SXT so Shaft TPAC indicates +27000.

51A. Set OPTICS CONTROLLER SPEED switch to HI and, using Optics Hand Controller, drive SXT until Shaft TPAC indicates approximately +27000. Return OPTICS CONTROLLER SPEED switch to LO and manipulate Optics Hand Controller to fine position and hold SXT so Shaft TPAC indicates +27000.

52. Insure that the horizontal reticle line of the SCT is coincident with the horizontal reticle line of target number 2 by adjusting the G & N Mounting Fixture cradle.

NOTE: Step 53 applies to Indicator Control panel 2021290 only. Step 53A applies to all Indicator Control panels except 2021290.

53. Set OPTICS ZERO switch on Indicator Control panel to ZERO. After approximately 20 seconds, set OPTICS ZERO switch to OFF. Set OPTICS TEL TRUN switch to 25°. The target number 2 reticle pattern shall appear to intersect the number 0 on the SCT vertical reticle line.

53A. Set OPTICS MODE switch on Indicator Control panel to ZERO. After approximately 20 seconds, set OPTICS MODE switch to MAN. Set OPTICS TELESCOPE TRUNNION switch to 25°. The target number 2 reticle pattern shall appear to intersect the number 0 on the SCT vertical reticle line.

NOTE: Step 54 applies to Indicator Control panel 2021290 only. Step 54A applies to all Indicator Control panels except 2021290.

54. Set OPTICS TEL TRUN switch to 0°. The target number 2 reticle pattern shall appear to intersect the center of the SCT reticle pattern.

54A. Set OPTICS TELESCOPE TRUNNION switch to 0°. The target number 2 reticle pattern shall appear to intersect the center of the SCT reticle pattern.

NOTE: Step 55 applies to Indicator Control panel 2021290 only. Step 55A applies to all Indicator Control panels except 2021290.

55. Set OPTICS TEL TRUN switch to SLAVE TO SXT.

55A. Set OPTICS TELESCOPE TRUNNION switch to SLAVE TO SXT.

NOTE: Step 56 applies to Indicator Control panel 2021290. Step 56A applies to all Indicator Control panels except 2021290.

56. Set OPTICS ZERO switch to ZERO. After approximately 20 seconds, set OPTICS ZERO switch to OFF.

56A. Set OPTICS MODE switch to ZERO. After approximately 20 seconds, set OPTICS MODE switch to MAN.

NOTE: Step 57 applies to Indicator Control panel 2021290 only. Step 57A applies to all Indicator Control panels except 2021290.

57. Set OPTICS SPEED switch to HI and, using Optics Hand Controller, drive SXT until Shaft TPAC indicates approximately +27000. Set OPTICS SPEED switch to LO and manipulate Optics Hand Controller to fine position and hold SXT so that Shaft TPAC indicates +27000.

57A. Set OPTICS CONTROLLER SPEED switch to HI and, using Optics Hand Controller, drive SXT until Shaft TPAC indicates approximately +27000. Set OPTICS CONTROLLER SPEED switch to LO and manipulate Optics Hand Controller to fine position and hold SXT so that Shaft TPAC indicates +27000.

58. Insure the horizontal reticle line of the SCT is coincident with horizontal reticle line of target number 2 by adjusting the G & N Mounting Fixture cradle.

59. Sight through the SXT StLOS and, using the Optics Hand Controller, position the approximate center of the SXT StLOS reticle pattern to the number 10 resolution pattern of target number 1.

60. Sight through StLOS and LLOS and observe the number 10 and surrounding lines of target number 1 reticle. The number 10 and surrounding lines shall be clear and distinct. Record indication.

61. Position the SCT resolution card approximately 10 feet from the SCT trunnion axis.

62. Sight through the SCT LOS and, using the Optics Hand Controller, position the approximate center of the SCT LOS reticle pattern to the 3 min. resolution pattern of the resolution card.

63. Sight through the SCT and observe the number and surrounding lines on the resolution card. The number and surrounding lines shall be clear and distinct. Record indication.

64. Using Optics Hand Controller, position the SXT Trunnion between 0° and 10° as indicated by the Trunnion TPAC.

NOTE: Step 65 applies to Indicator Control panel 2021290 only. Step 65A applies to all Indicator Control panels except 2021290.

65. Set OPTICS ZERO switch to ZERO. After one minute, perform following DSKY operations:

a. VERB 06 NOUN 55 ENTR
b. Record Row 1 (Shaft Angle) and Row 2 (Trunnion LOS Angle) indications on lines (a) and (b) of the Data Sheet.

65A. Set OPTICS MODE switch to ZERO. After one minute, perform the following DSKY operations:

a. VERB 06 NOUN 55 ENTR
b. Record Row 1 (Shaft Angle) and Row 2 (Trunnion LOS Angle) indications on lines (a) and (b) of the Data Sheet.

66. Place the VDW in front of target number 1 using the VDW base which allows deviation to be measured in the vertical plane (setting knob points upward). Set VDW dial to zero.

67. Cover the SXT StLOS. Sight through the SXT LLOS and adjust the G & N Mounting Fixture until the horizontal reticle line of the SXT is coincident with the dot and horizontal reticle line of target number 1.

NOTE: If coincidence cannot be achieved in step 67 by adjusting the G & N Mounting Fixture, target number 1 may be adjusted in azimuth as necessary to achieve coincidence.

68. Sight through the SXT LLOS and move the VDW laterally until target number 1 reticle is seen clearly. Adjust the VDW dial until the central horizontal reticle line of SXT is coincident with dot and horizontal reticle line of target number 1. Record the VDW reading on line (c). Uncover the SXT StLOS.

NOTE: If the value obtained for line (g) in step 69 is not within tolerance, perform the alternate procedure given in steps 72 through 80 to verify that an out-of-tolerance condition exists.

69. Cover the SXT LLOS. Sight through the SXT StLOS and adjust the VDW dial until the central horizontal reticle line of SXT is coincident with the dot and horizontal reticle line of target number 1. Record the VDW reading on line (e). Complete lines (d), (f), and (g). Uncover SXT LLOS.

NOTE: Step 70 applies to Indicator Control panel 2021290 only. Step 70A applies to all Indicator Control panels except 2021290.

70. Set OPTICS ZERO switch on Indicator Control panel to OFF.

70A. Set OPTICS MODE switch on Indicator Control panel to MAN.

70B. Perform the following DSKY operations:

a. VERB 01 NOUN 10 ENTR
b. 00077 ENTR
c. The contents of Row 1 shall be 00000.

71. Press OPTICS POWER ON pushbutton on Test Control panel. OPTICS POWER ON pushbutton shall go out.

JOB OPTICS POSITIONAL ACCURACY TEST | JDC 12214 REV W PAGE 9 OF 9

SUBSYSTEM G & N SYSTEM | ASSY

ALTERNATE SXT LOS PARALLELISM PROCEDURE

72. Place the theodolite in a line coincident with the SXT LLOS and cover the SXT StLOS.

73. Level theodolite base to the plate spirit level and level the altitude spirit level. Adjust the telescope focus to infinity. Set telescope to approximately 90°. Install the portable light assembly and adapter in the SXT eyepiece assembly. While observing the theodolite image, adjust the G & N Mounting Fixture until the SXT reticle is superimposed on the theodolite horizontal filar.

74. Align the theodolite horizontal filar to the SXT reticle and record the vertical angle.

75. Reverse and plunge the theodolite telescope and repeat step 74.

76. Repeat steps 74 and 75 for seven additional pairs of readings. After each time that step 75 is completed, drive the theodolite elevation off prior to realigning to the SXT reticle.

77. Place the theodolite in a line coincident with the SXT StLOS and cover the SXT LLOS.

78. Repeat step 73.

79. Repeat steps 74, 75, and 76.

80. Complete calculations for SXT StLOS to LLOS parallelism error.

ASSY.

DESCRIPTION SXT LOS parallelism and SXT StLOS positional accuracy are checked in this test.

Rev. Let.	Date	TDRR NO.	PAGES REVISED		APPROVAL	
			JDC	D.S.	MIT	NASA

REFERENCES

IMPORTANT

INTERVAL

TOOLS AND MATERIAL Variable Deviation Wedge
SCT Resolution Card

NOTE: The G & N Mounting Fixture shall be set at the 0.0° position.

1. Insure that the TELESCOPE TRUNNION switch on the Indicator Control panel is set to SLAVE TO SXT and that the TRACKER switch is in the OFF position.

2. Set the CONTROLLER COUPLING switch to DIRECT and the CONTROLLER SPEED switch to HI.

3. Perform the following DSKY operations:

a. VERB 16 NOUN 55 ENTR

b. Observe SXT Shaft Angle Displayed on Row 1

c. Observe SXT TRN LOS Angle Displayed on Row 2

4. Set the OPTICS MODE switch on the Indicator Control panel to ZERO. After one minute, record the DSKY Row 1 (Shaft Angle) and Row 2 (Trunnion LOS Angle) indications on lines (a) and (b) of the Data Sheet.

5. Place the Variable Deviation Wedge (VDW) in front of target number 1 and set VDW dial to zero. Sight through SXT LLOS and adjust the G & N Mounting Fixture until the horizontal reticle line of the SXT is coincident with the dot and horizontal reticle line of target number 1.

VERIFICATION WITH SIDL REQUIRED BEFORE USE

DATE ________

---

6. Set the OPTICS MODE switch on the Indicator Control panel to MAN. Pushing the Optics hand controller to the left, drive the SXT until Row 1 of the DSKY indicates 27000. Set the CONTROLLER SPEED switch to LO and manipulate the Optics hand controller to fine position and hold the SXT so that Row 1 indicates 27000 and Row 2 indicates the value recorded in step 4, line (a).

7. Cover the SXT StLOS and sight through the SXT LLOS and move the VDW laterally until target number 1 reticle is seen clearly. Adjust the VDW dial until central vertical reticle line of SXT is coincident with dot and vertical reticle line of target number 1. Record the dial reading of the VDW on line (c). Uncover StLOS.

8. Cover the SXT LLOS and repeat step 7 for the SXT StLOS while maintaining a DSKY Row 2 indication of step 4, line (a), and Row 1 indication of 27000 by manipulating the Optics hand controller. Record VDW reading on line (e). Complete lines (d), (f) and (g).

9. Set OPTICS MODE switch to ZERO. After the DSKY displays all zeroes on Row 1 and Row 2, set the OPTICS MODE switch to MAN.

10. Complete lines (i) (j) and (k) on the Data Sheet. Set the CONTROLLER SPEED switch to HI.

11. Repeat step 6.

12. Set the VDW to value recorded on line (c). Sight through the SXT eyepiece and viewing along the LLOS, insure that the SXT vertical reticle line and target number 1 reticle dot (or vertical reticle line) are coincident.

13. Place the VDW in front of target number 3 and cover target number 1.

14. Set the VDW to the value recorded on line (k).

15. Set the CONTROLLER SPEED switch on the Indicator Control panel to HI and using the Optics hand controller, drive the SXT until Row 2 of the DSKY indicates 45000. Return the CONTROLLER SPEED switch to LO.

16. Manipulate the Optics hand controller vertically to position the SXT StLOS until the central dot on reticle of target number 3 approaches the vertical crosshair on the SXT reticle. At the instant of coincidence, press the MARK pushbutton.

NOTE: VERB 06, NOUN 56 shall appear on the CMC DSKY indicating optical CDU and time displays.

17. Record the NAV DSKY Row 2 indication on line (l) of the Data Sheet. Repeat step 16 two more times, recording the DSKY Row 2 indication for each MARK.

18. Observe the three bit counts of line (l) of the Data Sheet. If two of the three counts

DATE ________

---

are equal, record this count in line (m). If all three counts are different, record the count which falls between the smallest and the largest on line (m).

19. Complete lines (n) and (o) of the Data Sheet.

20. Set the VDW to the value recorded on line (n).

21. Manipulate the Optics hand controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 approaches the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

22. Record the NAV DSKY Row 2 indication on line (p) of the Data Sheet. Repeat step 21 two more times, recording the DSKY Row 2 indication for each MARK.

23. Observe the three bit counts of line (p). If two of the three counts are equal, record this count on line (q). If all three counts are different, record the count which falls between the smallest and the largest on line (q).

24. Complete lines (r), (s), (t) and (u).

25. Set the VDW to the value recorded on line (u).

26. Manipulate the Optics hand controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 is approaching the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

27. Record the NAV DSKY Row 2 indication on line (v). Repeat step 26 two more times, recording the DSKY Row 2 indication for each MARK.

28. Observe the three bit counts of line (v). If two of the three counts are equal, record this count on line (w). If all three counts are different, record the count which falls between the smallest and the largest on line (w).

29. Complete lines (x), (y), (z) and (aa).

30. Set the VDW to the value recorded on line (aa).

31. Manipulate the Optics hand controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 is approaching the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

32. Record the NAV DSKY Row 2 indication on line (ab). Repeat step 31 two more times, recording the DSKY Row 2 indication for each MARK.

33. Observe the three bit counts of line (ab). If two of the three counts are equal, record this count on line (ac). If all three counts are different, record the count which falls between the smallest and the largest on line (ac).

34. Complete lines (ad), (ae), (af) and (ag).

35. Set the VDW to the value recorded on line (ag).

36. Manipulate the Optics hand controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 is approaching the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

37. Record the NAV DSKY Row 2 indication on line (ah). Repeat step 36 two more times, recording the DSKY Row 2 indication for each MARK.

38. Observe the three bit counts on line (ah). If two of the three counts are equal, record this count on line (ai). If all three counts are different, record the count which falls between the smallest and the largest on line (ai).

39. Complete lines (aj), (ak), (al) and (am).

40. Set the VDW to the value recorded on line (am).

41. Manipulate the Optics hand controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 is approaching the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

42. Record the NAV DSKY Row 2 indication on line (an). Repeat step 41 two more times, recording the DSKY Row 2 indication for each MARK.

43. Observe the three bit counts on line (an). If two of the three counts are equal, record this count on line (ao). If all three counts are different, record the count which falls between the smallest and the largest on line (ao).

DATE ________

---

44. Complete lines (ap), (aq), (ar) and (as).

45. Set the VDW to the value recorded on line (as).

46. Manipulate the Optics hand controller vertically to position the SXT StLOS until the central dot on the reticle of target number 3 is approaching the vertical crosshair on the SXT reticle. Press the MARK pushbutton at the instant of coincidence.

47. Record the NAV DSKY Row 2 indication on line (at). Repeat step 46 two more times, recording the DSKY Row 2 indication for each MARK.

48. Observe the three bit counts on line (at). If two of the three counts are equal, record this count on line (au). If all three counts are different, record the count which falls between the smallest and the largest on line (au).

49. Complete lines (av) and (aw).

50. Set the OPTICS MODE switch on the Indicator Control panel to ZERO. After all zeroes are indicated on Row 1 and Row 2 of the DSKY, return the switch to MANUAL.

51. Set the CONTROLLER SPEED switch to HI, and using the Optics hand controller, drive the SXT until Row 1 of the DSKY indicates 27000. Return the CONTROLLER SPEED switch to LO and manipulate the Optics hand controller to fine position and hold the SXT so that Row 1 indicates 27000.

52. Insure that the horizontal reticle line of the SCT is coincident with the

DATE ________

JOB OPTICS POSITIONAL ACCURACY TEST | JDC 12214 REV - PAGE 5 OF 5

SUBSYSTEM G & N SYSTEM | ASSY

horizontal reticle line of target number 2 by adjusting the G & N Mounting Fixture cradle.

53. Set the OPTICS MODE switch on the Indicator panel to ZERO. Set the TELESCOPE TRUNNION switch to 25°. The target number 2 reticle pattern shall appear to intersect the number 0 on the SCT vertical reticle line.

54. Set the TELESCOPE TRUNNION switch to 0°. The target number 2 reticle pattern shall appear to intersect the center of the SCT reticle pattern.

55. Set the TELESCOPE TRUNNION switch to SLAVE TO SXT.

56. Set the OPTICS MODE switch to ZERO, and after all zeroes are indicated on Row 1 and Row 2 of the DSKY'S, set the OPTICS MODE switch to MANUAL.

57. Set the CONTROLLER SPEED switch to HI and using the Optics hand controller, drive the SXT until Row 1 of the NAV DSKY indicates +27000. Set the CONTROLLER SPEED switch to LO and manipulate the Optics hand controller to fine position and hold the SXT so that Row 1 of the DSKY indicates 270.00°.

58. Insure the horizontal reticle line of the SCT is coincident with horizontal reticle line of target number 2 by adjusting the G & N Mounting Fixture cradle.

59. Sight through the SXT StLOS and, using the Optics hand controller, position the approximate center of the SXT StLOS reticle pattern to the number 10 resolution pattern of target number 1.

60. Sight through StLOS and LLOS and observe the number 10 and surrounding lines on target number 1 reticle. The number 10 and surrounding lines shall be clear and distinct. Record indication.

61. Position the SCT resolution card approximately 10 feet from the SCT trunnion axis.

62. Sight through the SCT LOS and, using the Optics hand controller, position the approximate center of the SCT LOS reticle pattern to the 3 min. resolution pattern of the resolution card.

63. Sight through the SCT and observe the number and surrounding lines on the resolution card. The number and surrounding lines shall be clear and distinct. Record indication.

64. Set the OPTICS MODE switch to ZERO, and after all zeroes are indicated on Row 1 and Row 2 of the DSKY'S, set the OPTICS MODE switch to MAN.

INTERVAL

TOOLS AND MATERIAL

IMPORTANT: The G & N System must be handled, installed and operated with extreme care since it contains delicate, sensitive instruments and has many critical components. The proper setup procedure and operating sequence is required to prevent possible damage or degradation of G & N system and components. This JDC shall be complied with as specified to provide proper initial conditions before performing various tests.

1. Monitor the Monitor panel to insure that the BLOCK II and G/N TEST CONFIG indicators are lighted.

2. Monitor the Temperature Monitor Control panel to insure the AUX HTR PWR indicator or PSA HTR PWR indicator are lighted.

3. Monitor and insure that the ALARM INHIBIT pushbutton on the Monitor panel is not lighted.

4. Insure that the following items of test equipment are turned on:

- Digital Recorder
- Dual Beam Oscilloscope
- Monitor Oscilloscope
- Signal Generator
- Digital Voltmeter

VERIFICATION WITH SIDL REQUIRED BEFORE USE

DATE 30 JUN 66

JOB MASTER INITIALIZATION

JDC 12215 REV A PAGE 2 OF 2

SUBSYSTEM G & N SYSTEM

ASSY

- Counter
- Phase Angle Voltmeter
- Oscillograph
- Remote Counter Indicator

5. Press the POWER ON pushbutton on the Primary Signal Selector panel, as necessary, to light the pushbutton.

6. Monitor the Test Control panel to determine that the following pushbuttons are lighted:

- CGC/LGC POWER ON
- 400 CPS POWER ON
- ISS OPERATE

NOTE: If system is not in the OPERATE mode refer to JDC 12204 for applicable turn on procedures.

7. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 156. Monitor the IRIG temperature deviation (from 135°F) on the DVM for in spec temperature limits (-3.25 v min to +4.0 v max).

8. Set the CROSSBAR CONTROL to 255. Monitor the PIP temperature deviation (from 130°F) on the DVM for in spec temperature limits (-2.5 v min to +2.5 v max).

9. Set the CROSSBAR CONTROL to 220.

10. Adjust the G & N POWER ADJUST control on the Test Control panel until the DVM indicates 28.0 (±0.25) vdc.

11. Insure the G & N Fixture Cradle Assembly is set to the 32.5° position unless specified otherwise in the JDC to be performed.

CAUTION: If the GIMBAL LOCK lamp on the DSKY is lighted, proceed to step 12.c.

12. Perform the following DSKY operations:

a.	VERB 36		ENTR

indicator or PSA HTR PWR indicator are lighted.

3. Monitor and insure that the ALARM INHIBIT pushbutton on the Monitor panel is not lighted.

4. Insure that the following items of test equipment are turned on:

Digital Recorder
Dual Beam Oscilloscope
Monitor Oscilloscope
Signal Generator
Digital Voltmeter
Counter
Phase Angle Voltmeter
Oscillograph
Remote Counter Indicator

5. Press the POWER ON pushbutton on the Primary Signal Selector panel, as necessary, to light the pushbutton.

6. Monitor the Test Control panel to determine that the following pushbuttons are lighted:

CGC/LGC POWER ON
400 CPS POWER ON
ISS OPERATE

NOTE: If system is not in the OPERATE mode refer to JDC 12204 for applicable turn on procedures.

7. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 156. Monitor the IRIG temperature deviation (from 135°F) on the DVM for in spec temperature limits (-3.25 v min to +4.0 v max).

8. Set the CROSSBAR CONTROL to 255. Monitor the PIP temperature deviation (from 130°F) on the DVM for in spec temperature limits (-2.5 v min to +2.5 v max).

9. Set the CROSSBAR CONTROL to 220.

10. Adjust the G & N POWER ADJUST control on the Test Control panel until the DVM indicates 28.0 (±0.25) vdc.

11. Insure the G & N Fixture Cradle Assembly is set to the 32.5° position unless specified otherwise in the JDC to be performed.

CAUTION: If the GIMBAL LOCK lamp on the DSKY is lighted, proceed to step 12.c.

12. Perform the following DSKY operations:

a. VERB 36		ENTR
b. VERB 40	NOUN 20	ENTR
c. VERB 41	NOUN 20	ENTR
d. +00000		ENTR

TOOLS AND MATERIAL

IMPORTANT: 1. The G & N System must be handled, installed and operated with extreme care since it contains delicate, sensitive instruments and has many critical components. The proper set-up procedure and operating sequence is required to prevent possible damage or degradation of G & N system and components. This JDC shall be complied with as specified to provide proper initial conditions before performing various tests.

2. During performance of any JDC do not allow VERB or NOUN to flash or any monitor display to remain lighted longer than necessary in order to prevent excessive cycling of DSKY relays. Perform the step or steps required to extinguish the DSKY displays as soon as possible.

3. Insure that connector assembly (2003099) is removed and cable W226-P1 is connected to CGC test connector if required by JDC being performed.

1. Monitor the Monitor panel to insure that the BLOCK II and G/N TEST CONFIG indicators are lighted.

2. Monitor the Temperature Monitor Control panel to insure the AUX HTR PWR indicator or PSA HTR PWR indicator are lighted.

c. The contents of Row 1 shall be 00000.

NOTE: The contents of Row 1 should be interpreted as follows.

Channel 77 Code (Octal)		Alarm Source
001	**	*Parity Fail (F Memory)
003	**	*Parity Fail (E Memory)
004	**	TC Trap
010	**	Rupt Lock
020	**	Nightwatchman
040	***	Voltage Fail
100		Counter Fail
200		Scaler Fail
400		Scaler Double Frequency Alarm

*NOTE: Parity Fail will occur in either E or F Memory, but not in combination.

**NOTE: Depending on when the various alarms occur, a Counter Fail alarm may also occur and bit 7 will therefore also be set.

***NOTE: Other alarms will probably occur before the Voltage Fail alarm, in which case the contents of Channel 77 will contain the octal sum of all the alarms but it will contain the Voltage Fail Code.

g.	VERB 16	NOUN 20	ENTR

h. Observe NO ATT lamp lights

The IMU Gimbal angles (0°) shall be displayed on Rows 1, 2, and 3 of the MAIN and NAV DSKY's.

13. Insure that the OPTICS POWER ON pushbutton on the Test Control panel is lighted.

14. Insure the switches on the Indicator Control panel are set as follows:

a. COUPLING to DIRECT
b. MODE to MAN
c. TELESCOPE TRUNNION to SLAVE TO SXT
d. TRACKER to OFF
e. SPEED to LO
f. CONDITION LAMPS to ON
g. UP TELEMETRY to ACCEPT

15. Perform the following NAV DSKY operations:

a.	VERB 57	ENTR
b.	00015	ENTR

DATE ________

JOB SEMI AUTOMATIC MODE TEST | JDC 12216 REV. A PAGE 1 OF 6
INITIAL TDRR 29882 D.S. PGS 5

IMPORTANT

INTERVAL

TOOLS AND MATERIAL

1. Establish a Master Initialization condition and insure the Cradle Assembly is set to 32.5°.

2. Perform the following DSKY operations:

a.	VERB 57		ENTR
b.	Observe VERB 21	NOUN 01	Flashing
c.	00010		ENTR
d.	Observe VERB 06	NOUN 01	Flashing
e.	Observe PROG 07		Displayed

CDU ZERO

3. Enter VERB 33 and press the ENTR pushbutton on the DSKY. The NO ATT lamps shall light. After approximately 20 seconds, VERB 06 and NOUN 02 shall commence flashing.

4. Observe the Gimbal Angles, approximately 0.0°, are displayed on Rows 1, 2 and 3 of the NAV DSKY.

TOTAL ATTITUDE SINE INPHASE, TOTAL NULL

5. Set the Voltmeter Input to PAVM SIG 1. Record the total voltage for each corresponding CROSSBAR CONTROL setting on the Primary Signal Selector panel:

Signal	CROSSBAR CONTROL
a. Sin AIG 1X resolver	144
b. Sin AMG 1X resolver	143
c. Sin AOG 1X resolver	142

VERIFICATION WITH SIDL REQUIRED BEFORE USE

---

6. Enter VERB 33 and press the ENTR pushbutton on the DSKY. After approximately 20 seconds, VERB 06 and NOUN 03 shall commence flashing.

7. Observe and record the Gimbal Angles displayed on Rows 1, 2 and 3 of the NAV DSKY.

TOTAL ATTITUDE OUTPUTS

8. Set the Voltmeter Input to PAVM SIG 1 or 2 as indicated below. Record the inphase voltage for each corresponding CROSSBAR CONTROL setting on the Primary Signal Selector panel:

Signal	CROSSBAR CONTROL
a. Sin AIG 1X resolver	144
b. Sin AMG 1X resolver	143
c. Sin AOG 1X resolver	142
d. Cos AIG 1X resolver	243
e. Cos AMG 1X resolver	242
f. Cos AOG 1X resolver	241

9. Measure the phase angle of each of the outputs specified in step 8.

TOTAL ATTITUDE, BACKUP MODE

10. Press the INTERFACE LOAD TEST pushbutton and the TEST START pushbutton on the Test Selector panel. The pushbutton shall light. Set the INTERFACE LOAD TEST selector, and the CROSSBAR CONTROL on the Primary Signal Selector panel to the following positions and measure and record the indicated inphase voltages.

	INTERFACE LOAD TEST selector	CROSSBAR CONTROL
a.	2	144
b.	2	243
c.	3	143
d.	3	242
e.	4	142
f.	4	241

11. Press the INTERFACE LOAD TEST pushbutton and the TEST STOP pushbutton on the Test Selector panel. The pushbutton shall go out.

IMU CDU AC D/A OUTPUTS

12. Connect Buffered probes to each of the following test points on TPA #2. Record the total voltage indication on the PAVM for each signal:

a. TB4, 45(hi), 49(lo), IG AC D/A Error
b. TB4, 44(hi), 48(lo), MG AC D/A Error
c. TB4, 43(hi), 47(lo), OG AC D/A Error

CDU REPEATING ACCURACY 45°

13. Enter VERB 33 and press the ENTR pushbutton on the DSKY. The NO ATT lamp shall go out. After approximately 100 seconds, VERB 05 and NOUN 30 shall commence flashing. Record indications on Rows 1, 2 and 3 of the DSKY.

TOTAL ATTITUDE COSINE, TOTAL NULL

14. Perform the following DSKY operations:

a.	VERB 33	ENTR
b.	Observe NO ATT lamp lights	

---

c.	Observe VERB 06	NOUN 05	Flashing after approx. 20 seconds

The GIMBAL LOCK lamps on the DSKYs and the Monitor panel shall light, the PGNS lamp on the Indicator Control panel shall light and the G/N CAUTION lamp on the Monitor panel shall light.

15. Enter VERB 33 and press the ENTR pushbutton on the DSKY. After approximately 20 seconds, VERB 06 and NOUN 06 shall commence flashing.

16. Observe the Gimbal Angles, approximately 90.0°, are displayed on Rows 1, 2 and 3 of the DSKYs.

17. Set the Voltmeter Input to PAVM SIG 2. Record the total voltage for each corresponding CROSSBAR CONTROL setting on the Primary Signal Selector panel:

Signal	CROSSBAR CONTROL
a. Cos AIG 1X resolver	243
b. Cos AMG 1X resolver	242
c. Cos AOG 1X resolver	241

CDU COMMAND ACCURACY (135°)

18. Enter VERB 33 and press the ENTR pushbutton on the DSKY. After approximately 20 seconds, VERB 06 and NOUN 07 shall commence flashing.

19. Observe and record the Gimbal Angles are displayed on Row 1, Row 2 and Row 3 of the NAV DSKY.

20. Enter VERB 33 and press the ENTR pushbutton on the DSKY. After approximately 20 seconds, VERB 06 and NOUN 10 shall commence flashing. The GIMBAL LOCK indicators on the DSKYs and the Monitor panel shall not be lighted. Observe the Gimbal Angles, approximately 135°, 135° and 45° respectively, are indicated on Row 1, Row 2 and Row 3 of the DSKYs.

CDU REPEATING ACCURACY (135°)

21. Enter VERB 33 and press the ENTR pushbutton on the DSKY. The NO ATT lamp shall go out. After approximately 100 seconds, VERB 05 and NOUN 30 shall commence flashing. Record indications on Row 1, Row 2 and Row 3 of the DSKY.

CDU COMMAND ACCURACY (225°)

22. Perform the following DSKY operations:

a.	VERB 33		ENTR
b.	Observe NO ATT lamp lights		
c.	Observe VERB 06	NOUN 12	Flashing after approx. 20 seconds

23. Observe and record the Gimbal Angles displayed on Row 1, Row 2 and Row 3 of the NAV DSKY. The GIMBAL LOCK lamps on the DSKYs and Monitor panel, the G & N CAUTION lamp on the Monitor panel and the PGNS lamp on the Indicator Control panel shall be lighted.

---

24. Enter VERB 33 and press the ENTR pushbutton on the DSKY. After approximately 20 seconds, VERB 06 and NOUN 13 shall commence flashing. The GIMBAL LOCK indicators on the DSKYs and the Monitor panel shall not be lighted. Observe the Gimbal Angles, approximately 225°, 225° and 315° respectively, are indicated on Row 1, Row 2 and Row 3 of the DSKYs.

CDU REPEATING ACCURACY (225°)

25. Enter VERB 33 and press the ENTR pushbutton on the DSKY. The NO ATT lamp shall go out. After approximately 100 seconds, VERB 05 and NOUN 30 shall commence flashing. Record indications on Row 1, Row 2 and Row 3 of the DSKY.

TOTAL ATTITUDE OUTPUTS (315°)

26. Perform the following DSKY operations:

a.	VERB 33		ENTR
b.	Observe NO ATT lamp lights		
c.	Observe VERB 06	NOUN 15	Flashing after approx. 20 seconds

27. Observe and record the Gimbal Angles displayed on Row 1, Row 2 and Row 3 of the NAV DSKY.

28. Set the Voltmeter Input to PAVM SIG 1 or 2 as indicated below. Record the inphase voltage for each corresponding CROSSBAR CONTROL setting on the Primary Signal Selector panel:

Signal	CROSSBAR CONTROL
a. Sin AIG 1X resolver	144
b. Sin AMG 1X resolver	143
c. Sin AOG 1X resolver	142
d. Cos AIG 1Z resolver	243
e. Cos AMG 1X resolver	242
f. Cos AOG 1X resolver	241

29. Measure and record the phase angle of each of the outputs specified in step 28.

30. Press the INTERFACE LOAD TEST pushbutton and the TEST START pushbutton on the Test Selector panel. The pushbutton shall light. Set the INTERFACE LOAD TEST selector and the CROSSBAR CONTROL on the Primary Signal Selector panel to the following positions and measure and record the indicated inphase voltages.

	INTERFACE LOAD TEST selector	CROSSBAR CONTROL
a.	2	144
b.	2	243
c.	3	143
d.	3	242
e.	4	142
f.	4	241

31. Press the INTERFACE LOAD TEST pushbutton and the TEST STOP pushbutton on the Test Selector panel. The pushbutton shall go out.

CDU REPEATING ACCURACY (315°)

32. Enter VERB 33 and press the ENTR pushbutton on the DSKY. The NO ATT lamp shall go out. After approximately 100 seconds, VERB 05 and NOUN 30 shall commence flashing. Record indications on Row 1, Row 2 and Row 3 of the DSKY.

-GIMBAL LOCK TEST

33. Perform the following DSKY operations:

a. VERB 33 ENTR
b. Observe
NO ATT lamp lights
c. Observe
VERB 06 NOUN 17 Flashing after approx. 20 seconds

The GIMBAL LOCK lamps on the DSKYs and the Monitor panel, the G & N CAUTION lamp on the Monitor panel and the PGNS alarm lamp on the Indicator Control panel shall light. Observe the Gimbal Angles, approximately 289°, are indicated on Row 1, Row 2 and Row 3 of the DSKYs.

34. Enter VERB 33 and press the ENTR pushbutton on the DSKY. After approximately 20 seconds, VERB 06 and NOUN 20 shall commence flashing. Insure that Row 1, Row 2 and Row 3 display approximately 0°.

IMU CDU COMMAND RATE TEST

35. Enter VERB 33 and press the ENTR pushbutton on the DSKY. Observe that the COMP ACTY lamp on the DSKY flashes on for a few seconds and then goes out. After approximately 15 seconds, VERB 06 and NOUN 66 shall commence flashing. Record indications of Row 1 and Row 2 on the DSKY. (MG CDU rate.) The GIMBAL LOCK lamps on the DSKYs and the Monitor panel, the G & N CAUTION lamp on the Monitor panel and the PGNS lamp on the Indicator Control panel shall be lighted.

36. Perform the following DSKY operations:

a. VERB 33 ENTR

After approximately 30 seconds, observe that VERB 06 and NOUN 66 commence flashing. Record the indications on Row 1 and Row 2 of the DSKY. (IG CDU rate.) The GIMBAL LOCK lamps on the DSKY and the Monitor panel shall not be lighted.

37. Perform the following DSKY operations:

a. VERB 33 ENTR

After approximately 30 seconds, observe that VERB 06 and NOUN 66 commence flashing. Record the indications on Row 1 and Row 2 of the DSKY. (OG CDU rate.)

IMU CDU FINE FAIL TEST

38. Perform the following DSKY operations:

a. VERB 33 ENTR
b. Observe
NO ATT lamp goes out
c. Observe
VERB 21 NOUN 22 Flashing after approx. 20 seconds

Observe the GIMBAL LOCK lamps on the DSKYs and the Monitor panel are not lighted.

39. Perform the following DSKY operations:

a. +00100 ENTR
b. Observe
VERB 22 NOUN 22 Flashing
c. +00100 ENTR

DATE 30 JUN 66

---

d. Observe
VERB 23 NOUN 22 Flashing
e. +00100 ENTR

The NO ATT lamp shall light momentarily then go out. After approximately 100 seconds, VERB 01, and NOUN 10 shall commence flashing. The ISS WARNING and alarm lamps on the Monitor panel and the Indicator Control panel shall light.

40. Row 1 of the DSKYs shall indicate 33XXX and Row 3 shall indicate 00030.

IMU CDU COARSE FAIL TEST

41. Perform the following DSKY operations:

a. VERB 33 ENTR
b. Observe
ISS WARNING lamp goes out
c. Observe
VERB 21 NOUN 22 Flashing after approx. 20 seconds
c. +03375 ENTR
d. Observe
VERB 22 NOUN 22 Flashing
e. +03375 ENTR
f. Observe
VERB 23 NOUN 22 Flashing
g. +03375 ENTR

The NO ATT lamp shall light momentarily then go out. After approximately 90 seconds, VERB 01 and NOUN 10 shall commence flashing. The ISS WARNING and alarm lamps on the Monitor panel and the Indicator Control panel shall light.

42. Row 1 of the DSKYs shall indicate 33XXX and Row 3 shall indicate 00030.

OPTICS RATE TEST

43. Perform the following DSKY operations:

a. VERB 33 ENTR
b. Observe
ISS WARNING lamp goes out
c. Observe
NO ATT lamp lights
d. Observe
VERB 06 NOUN 55 Flashing after approx. 20 seconds

44. Set the OPTICS MODE switch on the Indicator Control panel to MAN then to ZERO. Wait 15 seconds.

45. Set the OPTICS MODE switch to CMC.

SHAFT RATE TEST

46. Enter VERB 33 and press the ENTR pushbutton on the DSKY. After approximately 25 seconds, VERB 06 and NOUN 66 shall commence flashing. Record the indications on Row 1 and Row 2.

TRUNNION RATE TEST

47. Perform the following DSKY operations:

a. VERB 33 ENTR

In approximately 15 seconds, VERB 06 and NOUN 66 shall commence flashing. Record the indications on Row 1 and Row 2 of the DSKY.

48. Perform the following DSKY operations:

a. VERB 34 ENTR
b. Observe
PROG lamp indicates 00

							TOOLS AND MATERIAL

1. Establish a Master Initialization condition and insure the Cradle Assembly is set to 32.5°.

1A. Press OPTICS POWER ON pushbutton on Test Control panel until pushbutton is lighted.

2. Perform the following DSKY operations:

a. VERB 57 ENTR
b. Observe VERB 21 NOUN 01 Flashing
c. 00010 ENTR
d. Observe VERB 06 NOUN 01 Flashing
e. Observe PROG 07 Displayed

CDU ZERO

3. Enter VERB 33 and press the ENTR pushbutton on the DSKY. The NO ATT lamps shall light. After approximately 20 seconds, VERB 06 and NOUN 02 shall commence flashing.

4. Observe the Gimbal Angles, approximately 0.0°, are displayed on Rows 1, 2 and 3 of the DSKY.

TOTAL ATTITUDE SINE INPHASE, TOTAL NULL

5. Set the Voltmeter Input to PAVM SIG 1. Record the total voltage for each corresponding CROSSBAR CONTROL setting on the Primary Signal Selector panel:

Signal	CROSSBAR CONTROL
a. Sin AIG 1X resolver	144
b. Sin AMG 1X resolver	143
c. Sin AOG 1X resolver	142

VERIFICATION WITH SIDL REQUIRED BEFORE USE

---

6. Enter VERB 33 and press the ENTR pushbutton on the DSKY. After approximately 20 seconds, VERB 06 and NOUN 03 shall commence flashing.

7. Observe and record the Gimbal Angles displayed on Rows 1, 2 and 3 of the DSKY.

TOTAL ATTITUDE OUTPUTS

8. Set the Voltmeter Input to PAVM SIG 1 or 2 as indicated below. Record the inphase voltage for each corresponding CROSSBAR CONTROL setting on the Primary Signal Selector panel:

Signal	CROSSBAR CONTROL
a. Sin AIG 1X resolver	144
b. Sin AMG 1X resolver	143
c. Sin AOG 1X resolver	142
d. Cos AIG 1X resolver	243
e. Cos AMG 1X resolver	242
f. Cos AOG 1X resolver	241

9. Measure the phase angle of each of the outputs specified in step 8.

TOTAL ATTITUDE, BACKUP MODE

10. Press the INTERFACE LOAD TEST pushbutton and the TEST START pushbutton on the Test Selector panel. The pushbutton shall light. Set the INTERFACE LOAD TEST selector, and the CROSSBAR CONTROL on the Primary Signal Selector panel to the following positions and measure and record the indicated inphase voltages.

	INTERFACE LOAD TEST selector	CROSSBAR CONTROL
a.	2	144
b.	2	243
c.	3	143
d.	3	242
e.	4	142
f.	4	241

11. Press the INTERFACE LOAD TEST pushbutton and the TEST STOP pushbutton on the Test Selector panel. The pushbutton shall go out.

IMU CDU AC D/A OUTPUTS

12. Connect Buffered probes to each of the following test points on TPA #2. Record the total voltage indication on the PAVM for each signal:

a. TB4, 45(hi), 49(lo), IG AC D/A Error
b. TB4, 44(hi), 48(lo), MG AC D/A Error
c. TB4, 43(hi), 47(lo), OG AC D/A Error

CDU REPEATING ACCURACY 45°

13. Enter VERB 33 and press the ENTR pushbutton on the DSKY. The NO ATT lamp shall go out. After approximately 100 seconds, VERB 05 and NOUN 30 shall commence flashing. Record indications on Rows 1, 2 and 3 of the DSKY.

TOTAL ATTITUDE COSINE, TOTAL NULL

14. Perform the following DSKY operations:

a. VERB 33 ENTR
b. Observe NO ATT lamp lights

---

c. Observe VERB 06 NOUN 05 Flashing after approx. 20 seconds

The GIMBAL LOCK lamps on the DSKY and the Monitor panel shall light, the PGNS lamp on the Indicator Control panel shall light and the G/N CAUTION lamp on the Monitor panel shall light.

15. Enter VERB 33 and press the ENTR pushbutton on the DSKY. After approximately 20 seconds, VERB 06 and NOUN 06 shall commence flashing.

16. Observe the Gimbal Angles, approximately 90.0°, are displayed on Rows 1, 2 and 3 of the DSKY.

17. Set the Voltmeter Input to PAVM SIG 2. Record the total voltage for each corresponding CROSSBAR CONTROL setting on the Primary Signal Selector panel:

Signal	CROSSBAR CONTROL
a. Cos AIG 1X resolver	243
b. Cos AMG 1X resolver	242
c. Cos AOG 1X resolver	241

CDU COMMAND ACCURACY (135°)

18. Enter VERB 33 and press the ENTR pushbutton on the DSKY. After approximately 20 seconds, VERB 06 and NOUN 07 shall commence flashing.

19. Observe and record the Gimbal Angles are displayed on Row 1, Row 2 and Row 3 of the DSKY.

20. Enter VERB 33 and press the ENTR pushbutton on the DSKY. After approximately 20 seconds, VERB 06 and NOUN 10 shall commence flashing. The GIMBAL LOCK indicators on the DSKY and the Monitor panel shall not be lighted. Observe the Gimbal Angles, approximately 135°, 135° and 45° respectively, are indicated on Row 1, Row 2 and Row 3 of the DSKY.

CDU REPEATING ACCURACY (135°)

21. Enter VERB 33 and press the ENTR pushbutton on the DSKY. The NO ATT lamp shall go out. After approximately 100 seconds, VERB 05 and NOUN 30 shall commence flashing. Record indications on Row 1, Row 2 and Row 3 of the DSKY.

CDU COMMAND ACCURACY (225°)

22. Perform the following DSKY operations:

a. VERB 33 ENTR
b. Observe NO ATT lamp lights
c. Observe VERB 06 NOUN 12 Flashing after approx. 20 seconds

23. Observe and record the Gimbal Angles displayed on Row 1, Row 2 and Row 3 of the DSKY. The GIMBAL LOCK lamps on the DSKY and Monitor panel, the G & N CAUTION lamp on the Monitor panel and the PGNS lamp on the Indicator Control panel shall be lighted.

---

24. Enter VERB 33 and press the ENTR pushbutton on the DSKY. After approximately 20 seconds, VERB 06 and NOUN 13 shall commence flashing. The GIMBAL LOCK indicators on the DSKY and the Monitor panel shall not be lighted. Observe the Gimbal Angles, approximately 225°, 225° and 315° respectively, are indicated on Row 1, Row 2 and Row 3 of the DSKY.

CDU REPEATING ACCURACY (225°)

25. Enter VERB 33 and press the ENTR pushbutton on the DSKY. The NO ATT lamp shall go out. After approximately 100 seconds, VERB 05 and NOUN 30 shall commence flashing. Record indications on Row 1, Row 2 and Row 3 of the DSKY.

TOTAL ATTITUDE OUTPUTS (315°)

26. Perform the following DSKY operations:

a. VERB 33 ENTR
b. Observe NO ATT lamp lights
c. Observe VERB 06 NOUN 15 Flashing after approx. 20 seconds

27. Observe and record the Gimbal Angles displayed on Row 1, Row 2 and Row 3 of the DSKY.

28. Set the Voltmeter Input to PAVM SIG 1 or 2 as indicated below. Record the inphase voltage for each corresponding CROSSBAR CONTROL setting on the Primary Signal Selector panel:

Signal	CROSSBAR CONTROL
a. Sin AIG 1X resolver	144
b. Sin AMG 1X resolver	143
c. Sin AOG 1X resolver	142
d. Cos AIG 1Z resolver	243
e. Cos AMG 1X resolver	242
f. Cos AOG 1X resolver	241

29. Measure and record the phase angle of each of the outputs specified in step 28.

30. Press the INTERFACE LOAD TEST pushbutton and the TEST START pushbutton on the Test Selector panel. The pushbutton shall light. Set the INTERFACE LOAD TEST selector and the CROSSBAR CONTROL on the Primary Signal Selector panel to the following positions and measure and record the indicated inphase voltages.

	INTERFACE LOAD TEST selector	CROSSBAR CONTROL
a.	2	144
b.	2	243
c.	3	143
d.	3	242
e.	4	142
f.	4	241

31. Press the INTERFACE LOAD TEST pushbutton and the TEST STOP pushbutton on the Test Selector panel. The pushbutton shall go out.

CDU REPEATING ACCURACY (315°)

32. Enter VERB 33 and press the ENTR pushbutton on the DSKY. The NO ATT lamp shall go out. After approximately 100 seconds, VERB 05 and NOUN 30 shall commence flashing. Record indications on Row 1, Row 2 and Row 3 of the DSKY.

SUBSYSTEM G & N SYSTEM | ASSY

-GIMBAL LOCK TEST

33. Perform the following DSKY operations:

a. VERB 33 ENTR

b. Observe
NO ATT lamp lights

c. Observe
VERB 06 NOUN 17 Flashing after approx. 20 seconds

The GIMBAL LOCK lamps on the DSKY and the Monitor panel, the G & N CAUTION lamp on the Monitor panel and the PGNS alarm lamp on the Indicator Control panel shall light. Observe the Gimbal Angles, approximately 289°, are indicated on Row 1, Row 2 and Row 3of the DSKY.

34. Enter VERB 33 and press the ENTR pushbutton on the DSKY. After approximately 20 seconds, VERB 06 and NOUN 20 shall commence flashing. Insure that Row 1, Row 2 and Row 3 display approximately 0°.

IMU CDU COMMAND RATE TEST

35. Enter VERB 33 and press the ENTR pushbutton on the DSKY. Observe that the COMP ACTY lamp on the DSKY flashes on for a few seconds and then goes out. After approximately 15 seconds, VERB 06 and NOUN 66 shall commence flashing. Record indications of Row 1 and Row 2 on the DSKY. (MG CDU rate.) The GIMBAL LOCK lamps on the DSKY and the Monitor panel, the G & N CAUTION lamp on the Monitor panel and the PGNS lamp on the Indicator Control panel shall be lighted.

36. Perform the following DSKY operations:

a. VERB 33 ENTR

After approximately 30 seconds, observe that VERB 06 and NOUN 66 commence flashing. Record the indications on Row 1 and Row 2 of the DSKY. (IG CDU rate.) The GIMBAL LOCK lamps on the DSKY and the Monitor panel shall not be lighted.

37. Perform the following DSKY operations:

a. VERB 33 ENTR

After approximately 30 seconds, observe that VERB 06 and NOUN 66 commence flashing. Record the indications on Row 1 and Row 2 of the DSKY. (OG CDU rate.)

IMU CDU FINE FAIL TEST

38. Perform the following DSKY operations:

a. VERB 33 ENTR

b. Observe
NO ATT lamp goes out

c. Observe
VERB 21 NOUN 22 Flashing after approx. 20 seconds

Observe the GIMBAL LOCK lamps on the DSKY and the Monitor panel are not lighted.

39. Perform the following DSKY operations:

a. +00100 ENTR

b. Observe
VERB 22 NOUN 22 Flashing

c. +00100 ENTR

DATE 30 JUN 66

SUBSYSTEM G & N SYSTEM | ASSY

d. Observe
VERB 23 NOUN 22 Flashing

e. +00100 ENTR

The NO ATT lamp shall light momentarily then go out. After approximately 100 seconds, VERB 01, and NOUN 10 shall commence flashing. The ISS WARNING and alarm lamps on the Monitor panel and the Indicator Control panel shall light.

40. Row 1 of the DSKY shall indicate 33XXX and Row 3 shall indicate 00030.

IMU CDU COARSE FAIL TEST

41. Perform the following DSKY operations:

a. VERB 33 ENTR

b. Observe
ISS WARNING lamp goes out

c. Observe
VERB 21 NOUN 22 Flashing after approx. 20 seconds

c. +03375 ENTR

d. Observe
VERB 22 NOUN 22 Flashing

e. +03375 ENTR

f. Observe
VERB 23 NOUN 22 Flashing

g. +03375 ENTR

The NO ATT lamp shall light momentarily then go out. After approximately 90 seconds, VERB 01 and NOUN 10 shall commence flashing. The ISS WARNING and alarm lamps on the Monitor panel and the Indicator Control panel shall light.

42. Row 1 of the DSKY shall indicate 33XXX and Row 3 shall indicate 00030.

OPTICS RATE TEST

43. Perform the following DSKY operations:

a. VERB 33 ENTR

b. Observe
ISS WARNING lamp goes out

c. Observe
NO ATT lamp lights

d. Observe
VERB 06 NOUN 55 Flashing after approx. 20 seconds

44. Set the OPTICS MODE switch on the Indicator Control panel to MAN then to ZERO. Wait 15 seconds.

45. Set the OPTICS MODE switch to CGC.

SHAFT RATE TEST

46. Enter VERB 33 and press the ENTR pushbutton on the DSKY. After approximately 25 seconds, VERB 06 and NOUN 66 shall commence flashing. Record the indications on Row 1 and Row 2.

TRUNNION RATE TEST

47. Perform the following DSKY operations:

a. VERB 33 ENTR

In approximately 15 seconds, VERB 06 and NOUN 66 shall commence flashing. Record the indications on Row 1 and Row 2 of the DSKY.

48. Perform the following DSKY operations:

a. VERB 34 ENTR

b. Observe
PROG lamp indicates 00

49. Press OPTICS POWER ON pushbutton on Test Control panel. The pushbutton shall go out.

JOB SEMI AUTOMATIC MODE TEST

INITIAL TDRR 29882 D.S. PGS 5

SUBSYSTEM G & N SYSTEM

ASSY.

DESCRIPTION This test is designed to verify the IMU CDU moding, CDU repeating accuracy, CDU command accuracy, CDU command rate and Attitude Error positioning commands. The test is under CGC program control but provides operator control intervals to make analog measurements.

IMPORTANT

INTERVAL

TOOLS AND MATERIAL

1. Establish a Master Initialization condition in accordance with JDC 12215 and insure the Cradle Assembly is set to 32.5°.

1A. Press OPTICS POWER ON pushbutton on Test Control panel until pushbutton is lighted.

2. Perform the following DSKY operations:

a. VERB 57		ENTR
b. Observe VERB 21	NOUN 01	Flashing
c. 00010		ENTR
d. Observe VERB 06	NOUN 01	Flashing
e. Observe PROG 07		Displayed

CDU ZERO

3. Enter VERB 33 and press the ENTR pushbutton on the DSKY. The NO ATT lamps shall light. After approximately 20 seconds, VERB 06 and NOUN 02 shall commence flashing.

4. Observe the Gimbal Angles, approximately 0.0°, are displayed on Rows 1, 2 and 3 of the DSKY.

TOTAL ATTITUDE SINE INPHASE, TOTAL NULL

5. Set the Voltmeter Input to PAVM SIG 1. Record the total voltage for each corresponding CROSSBAR CONTROL setting on the Primary Signal Selector panel:

Signal	CROSSBAR CONTROL
a. Sin AIG 1X resolver	144
b. Sin AMG 1X resolver	143
c. Sin AOG 1X resolver	142

VERIFICATION WITH SIDL REQUIRED BEFORE USE

---

6. Enter VERB 33 and press the ENTR pushbutton on the DSKY. After approximately 20 seconds, VERB 06 and NOUN 03 shall commence flashing.

7. Observe and record the Gimbal Angles displayed on Rows 1, 2 and 3 of the DSKY.

TOTAL ATTITUDE OUTPUTS

8. Set the Voltmeter Input to PAVM SIG 1 or 2 as indicated below. Record the inphase voltage for each corresponding CROSSBAR CONTROL setting on the Primary Signal Selector panel:

Signal	CROSSBAR CONTROL
a. Sin AIG 1X resolver	144
b. Sin AMG 1X resolver	143
c. Sin AOG 1X resolver	142
d. Cos AIG 1X resolver	243
e. Cos AMG 1X resolver	242
f. Cos AOG 1X resolver	241

9. Measure the phase angle of each of the outputs specified in step 8.

TOTAL ATTITUDE, BACKUP MODE

10. Press the INTERFACE LOAD TEST pushbutton and the TEST START pushbutton on the Test Selector panel. The pushbutton shall light. Set the INTERFACE LOAD TEST selector, and the CROSSBAR CONTROL on the Primary Signal Selector panel to the following positions and measure and record the indicated inphase voltages.

	INTERFACE LOAD TEST selector	CROSSBAR CONTROL
a.	2	144
b.	2	243
c.	3	143
d.	3	242
e.	4	142
f.	4	241

11. Press the INTERFACE LOAD TEST pushbutton and the TEST STOP pushbutton on the Test Selector panel. The pushbutton shall go out.

IMU CDU AC D/A OUTPUTS

12. Connect Buffered probes to each of the following test points on TPA #2. Record the total voltage indication on the PAVM for each signal:

a. TB4, 45(hi), 49(lo), IG AC D/A Error

b. TB4, 44(hi), 48(lo), MG AC D/A Error

c. TB4, 43(hi), 47(lo), OG AC D/A Error

CDU REPEATING ACCURACY 45°

13. Enter VERB 33 and press the ENTR pushbutton on the DSKY. The NO ATT lamp shall go out. After approximately 100 seconds, VERB 05 and NOUN 30 shall commence flashing. Record indications on Rows 1, 2 and 3 of the DSKY.

TOTAL ATTITUDE COSINE, TOTAL NULL

NOTE: When only one DSKY is available for testing the following conditions will occur:

a. With the DSKY in the NAV DSKY location the G/N CAUTION lamp on the Monitor panel will not light as specified.

b. With the DSKY in the MAIN DSKY location the PGNS lamp on the Indicator Control panel will not light as specified.

---

14. Perform the following DSKY operations:

a. VERB 33		ENTR
b. Observe NO ATT lamp lights		
c. Observe VERB 06	NOUN 05	Flashing after approx. 20 seconds

The GIMBAL LOCK lamps on the DSKY and the Monitor panel shall light, the PGNS lamp on the Indicator Control panel shall light and the G/N CAUTION lamp on the Monitor panel shall light.

15. Enter VERB 33 and press the ENTR pushbutton on the DSKY. After approximately 20 seconds, VERB 06 and NOUN 06 shall commence flashing.

16. Observe the Gimbal Angles, approximately 90.0°, are displayed on Rows 1, 2 and 3 of the DSKY.

17. Set the Voltmeter Input to PAVM SIG 2. Record the total voltage for each corresponding CROSSBAR CONTROL setting on the Primary Signal Selector panel:

Signal	CROSSBAR CONTROL
a. Cos AIG 1X resolver	243
b. Cos AMG 1X resolver	242
c. Cos AOG 1X resolver	241

CDU COMMAND ACCURACY (135°)

18. Enter VERB 33 and press the ENTR pushbutton on the DSKY. After approximately 20 seconds, VERB 06 and NOUN 07 shall commence flashing.

19. Observe and record the Gimbal Angles are displayed on Row 1, Row 2 and Row 3 of the DSKY.

20. Enter VERB 33 and press the ENTR pushbutton on the DSKY. After approximately 20 seconds, VERB 06 and NOUN 10 shall commence flashing. The GIMBAL LOCK indicators on the DSKY and the Monitor panel shall not be lighted. Observe the Gimbal Angles, approximately 135°, 135° and 45° respectively, are indicated on Row 1, Row 2 and Row 3 of the DSKY.

CDU REPEATING ACCURACY (135°)

21. Enter VERB 33 and press the ENTR pushbutton on the DSKY. The NO ATT lamp shall go out. After approximately 100 seconds, VERB 05 and NOUN 30 shall commence flashing. Record indications on Row 1, Row 2 and Row 3 of the DSKY.

CDU COMMAND ACCURACY (225°)

22. Perform the following DSKY operations:

a. VERB 33		ENTR
b. Observe NO ATT lamp lights		
c. Observe VERB 06	NOUN 12	Flashing after approx. 20 seconds

NOTE: When only one DSKY is available for testing the following conditions will occur:

a. With the DSKY in the NAV DSKY location the G/N CAUTION lamp on the Monitor panel will not light as specified.

b. With the DSKY in the MAIN DSKY location the PGNS lamp on the Indicator Control panel will not light as specified.

---

23. Observe and record the Gimbal Angles displayed on Row 1, Row 2 and Row 3 of the DSKY. The GIMBAL LOCK lamps on the DSKY and Monitor panel, the G & N CAUTION lamp on the Monitor panel and the PGNS lamp on the Indicator Control panel shall be lighted.

24. Enter VERB 33 and press the ENTR pushbutton on the DSKY. After approximately 20 seconds, VERB 06 and NOUN 13 shall commence flashing. The GIMBAL LOCK indicators on the DSKY and the Monitor panel shall not be lighted. Observe the Gimbal Angles, approximately 225°, 225° and 315° respectively, are indicated on Row 1, Row 2 and Row 3 of the DSKY.

CDU REPEATING ACCURACY (225°)

25. Enter VERB 33 and press the ENTR pushbutton on the DSKY. The NO ATT lamp shall go out. After approximately 100 seconds, VERB 05 and NOUN 30 shall commence flashing. Record indications on Row 1, Row 2 and Row 3 of the DSKY.

TOTAL ATTITUDE OUTPUTS (315°)

26. Perform the following DSKY operations:

a. VERB 33		ENTR
b. Observe NO ATT lamp lights		
c. Observe VERB 06	NOUN 15	Flashing after approx. 20 seconds

27. Observe and record the Gimbal Angles displayed on Row 1, Row 2 and Row 3 of the DSKY.

28. Set the Voltmeter Input to PAVM SIG 1 or 2 as indicated below. Record the inphase voltage for each corresponding CROSSBAR CONTROL setting on the Primary Signal Selector panel:

Signal	CROSSBAR CONTROL
a. Sin AIG 1X resolver	144
b. Sin AMG 1X resolver	143
c. Sin AOG 1X resolver	142
d. Cos AIG 1Z resolver	243
e. Cos AMG 1X resolver	242
f. Cos AOG 1X resolver	241

29. Measure and record the phase angle of each of the outputs specified in step 28.

30. Press the INTERFACE LOAD TEST pushbutton and the TEST START pushbutton on the Test Selector panel. The pushbutton shall light. Set the INTERFACE LOAD TEST selector and the CROSSBAR CONTROL on the Primary Signal Selector panel to the following positions and measure and record the indicated inphase voltages.

	INTERFACE LOAD TEST selector	CROSSBAR CONTROL
a.	2	144
b.	2	243
c.	3	143
d.	3	242
e.	4	142
f.	4	241

31. Press the INTERFACE LOAD TEST pushbutton and the TEST STOP pushbutton on the Test Selector panel. The pushbutton shall go out.

CDU REPEATING ACCURACY (315°)

32. Enter VERB 33 and press the ENTR pushbutton on the DSKY. The NO ATT lamp

SUBSYSTEM G & N SYSTEM | ASSY

shall go out. After approximately 100 seconds, VERB 05 and NOUN 30 shall commence flashing. Record indications on Row 1, Row 2 and Row 3 of the DSKY.

GIMBAL LOCK TEST

NOTE: When only one DSKY is available for testing the following conditions will occur:

a. With the DSKY in the NAV DSKY location the G/N CAUTION lamp on the Monitor panel will not light as specified.

b. With the DSKY in the MAIN DSKY location the PGNS lamp on the Indicator Control panel will not light as specified.

33. Perform the following DSKY operations:

a. VERB 33 ENTR

b. Observe
NO ATT lamp lights

c. Observe
VERB 06 NOUN 17 Flashing after approx. 20 seconds

The GIMBAL LOCK lamps on the DSKY and the Monitor panel, the G & N CAUTION lamp on the Monitor panel and the PGNS alarm lamp on the Indicator Control panel shall light. Observe the Gimbal Angles, approximately 289°, are indicated on Row 1, Row 2 and Row 3 of the DSKY.

34. Enter VERB 33 and press the ENTR pushbutton on the DSKY. After approximately 20 seconds, VERB 06 and NOUN 20 shall commence flashing. Insure that Row 1, Row 2 and Row 3 display approximately 0°.

IMU CDU COMMAND RATE TEST

NOTE: When only one DSKY is available for testing the following conditions will occur:

a. With the DSKY in the NAV DSKY location the G/N CAUTION lamp on the Monitor panel will not light as specified.

b. With the DSKY in the MAIN DSKY location the PGNS lamp on the Indicator Control panel will not light as specified.

35. Enter VERB 33 and press the ENTR pushbutton on the DSKY. Observe that the COMP ACTY lamp on the DSKY flashes on for a few seconds and then goes out. After approximately 15 seconds, VERB 06 and NOUN 66 shall commence flashing. Record indications of Row 1 and Row 2 on the DSKY. (MG CDU rate.) The GIMBAL LOCK lamps on the DSKY and the Monitor panel, the G & N CAUTION lamp on the Monitor panel and the PGNS lamp on the Indicator Control panel shall be lighted.

36. Perform the following DSKY operations:

a. VERB 33 ENTR

After approximately 30 seconds, observe that VERB 06 and NOUN 66 commence flashing. Record the indications on Row 1 and Row 2 of the DSKY. (IG CDU rate.) The GIMBAL LOCK lamps on the DSKY and the Monitor panel shall not be lighted.

37. Perform the following DSKY operations:

a. VERB 33 ENTR

SUBSYSTEM G & N SYSTEM | ASSY

After approximately 30 seconds, observe that VERB 06 and NOUN 66 commence flashing. Record the indications on Row 1 and Row 2 of the DSKY. (OG CDU rate.)

IMU CDU FINE FAIL TEST

38. Perform the following DSKY operations:

a. VERB 33 ENTR

b. Observe
NO ATT lamp goes out

c. Observe
VERB 21 NOUN 22 Flashing after approx. 20 seconds

Observe the GIMBAL LOCK lamps on the DSKY and the Monitor panel are not lighted.

39. Perform the following DSKY operations:

a. +00100 ENTR

b. Observe
VERB 22 NOUN 22 Flashing

c. +00100 ENTR

d. Observe
VERB 23 NOUN 22 Flashing

e. +00100 ENTR

The NO ATT lamp shall light momentarily then go out. After approximately 100 seconds, VERB 01, and NOUN 10 shall commence flashing. The ISS WARNING and alarm lamps on the Monitor panel and the Indicator Control panel shall light.

40. Row 1 of the DSKY shall indicate 33XXX and Row 3 shall indicate 00030.

IMU CDU COARSE FAIL TEST

41. Perform the following DSKY operations:

a. VERB 33 ENTR

b. Observe
ISS WARNING lamp goes out

c. Observe
VERB 21 NOUN 22 Flashing after approx. 20 seconds

d. +03375 ENTR

e. Observe
VERB 22 NOUN 22 Flashing

f. +03375 ENTR

g. Observe
VERB 23 NOUN 22 Flashing

h. +03375 ENTR

The NO ATT lamp shall light momentarily then go out. After approximately 90 seconds, VERB 01 and NOUN 10 shall commence flashing. The ISS WARNING and alarm lamps on the Monitor panel and the Indicator Control panel shall light.

42. Row 1 of the DSKY shall indicate 33XXX and Row 3 shall indicate 00030.

OPTICS RATE TEST

43. Perform the following DSKY operations:

a. VERB 33 ENTR

b. Observe
ISS WARNING lamp goes out

c. Observe
NO ATT lamp lights

SUBSYSTEM G & N SYSTEM | ASSY

d. Observe
VERB 06 NOUN 55 Flashing after approx. 20 seconds

44. Set the OPTICS MODE switch on the Indicator Control panel to MAN then to ZERO. Wait 15 seconds.

45. Set the OPTICS MODE switch to CGC.

SHAFT RATE TEST

46. Enter VERB 33 and press the ENTR pushbutton on the DSKY. After approximately 25 seconds, VERB 06 and NOUN 66 shall commence flashing. Record the indications on Row 1 and Row 2.

TRUNNION RATE TEST

47. Perform the following DSKY operations:

a. VERB 33 ENTR

In approximately 15 seconds, VERB 06 and NOUN 66 shall commence flashing. Record the indications on Row 1 and Row 2 of the DSKY.

48. Perform the following DSKY operations:

a. VERB 34 ENTR

b. Observe
PROG lamp indicates 00

49. Press OPTICS POWER ON pushbutton on Test Control panel. The pushbutton shall go out.

JOB SEMI AUTOMATIC MODE TEST | JDC 12216 REV. D PAGE 1 OF 7
INITIAL TDRR 29882 D.S. PGS 5

SUBSYSTEM G & N SYSTEM | ASSY.

DESCRIPTION This test is designed to verify the IMU CDU moding, CDU repeating accuracy, CDU command accuracy, CDU command rate and Attitude Error positioning commands. The test is under CGC program control but provides operator control intervals to make analog measurements.

IMPORTANT

INTERVAL

TOOLS AND MATERIAL

1. Establish a Master Initialization condition in accordance with JDC 12215 and insure the Cradle Assembly is set to 32.5°.

1A. Press OPTICS POWER ON pushbutton on Test Control panel until pushbutton is lighted.

2. Perform the following DSKY operations:

a. VERB 57		ENTR	
b. Observe VERB 21	NOUN 01	Flashing	
c. 00010		ENTR	
d. Observe VERB 06	NOUN 01	Flashing	
e. Observe PROG 07		Displayed	

CDU ZERO

3. Enter VERB 33 and press the ENTR pushbutton on the DSKY. The NO ATT lamps shall light. After approximately 20 seconds, VERB 06 and NOUN 02 shall commence flashing.

4. Observe the Gimbal Angles, approximately 0.0°, are displayed on Rows 1, 2 and 3 of the DSKY.

TOTAL ATTITUDE SINE INPHASE, TOTAL NULL

5. Set the Voltmeter Input to PAVM SIG 1. Record the total voltage for each corresponding CROSSBAR CONTROL setting on the Primary Signal Selector panel:

Signal	CROSSBAR CONTROL
a. Sin AIG 1X resolver	144
b. Sin AMG 1X resolver	143
c. Sin AOG 1X resolver	142

VERIFICATION WITH SIDL REQUIRED BEFORE USE

DATE 30 JUN 66

JOB SEMI AUTOMATIC MODE SYSTEM | JDC 12216 REV D PAGE 2 OF 7

SUBSYSTEM G & N SYSTEM | ASSY

6. Enter VERB 33 and press the ENTR pushbutton on the DSKY. After approximately 20 seconds, VERB 06 and NOUN 03 shall commence flashing.

7. Observe and record the Gimbal Angles displayed on Rows 1, 2 and 3 of the DSKY.

TOTAL ATTITUDE OUTPUTS

8. Set the Voltmeter Input to PAVM SIG 1 or 2 as indicated below. Record the inphase voltage for each corresponding CROSSBAR CONTROL setting on the Primary Signal Selector panel:

Signal	CROSSBAR CONTROL
a. Sin AIG 1X resolver	144
b. Sin AMG 1X resolver	143
c. Sin AOG 1X resolver	142
d. Cos AIG 1X resolver	243
e. Cos AMG 1X resolver	242
f. Cos AOG 1X resolver	241

9. Measure the phase angle of each of the outputs specified in step 8.

TOTAL ATTITUDE, BACKUP MODE

10. Press the INTERFACE LOAD TEST pushbutton and the TEST START pushbutton on the Test Selector panel. The pushbutton shall light. Set the INTERFACE LOAD TEST selector, and the CROSSBAR CONTROL on the Primary Signal Selector panel to the following positions and measure and record the indicated inphase voltages.

	INTERFACE LOAD TEST selector	CROSSBAR CONTROL
a.	2	144
b.	2	243
c.	3	143
d.	3	242
e.	4	142
f.	4	241

11. Press the INTERFACE LOAD TEST pushbutton and the TEST STOP pushbutton on the Test Selector panel. The pushbutton shall go out.

IMU CDU AC D/A OUTPUTS

12. Connect Buffered probes to each of the following test points on TPA #2. Record the total voltage indication on the PAVM for each signal:

a. TB4, 45(hi), 49(lo), IG AC D/A Error
b. TB4, 44(hi), 48(lo), MG AC D/A Error
c. TB4, 43(hi), 47(lo), OG AC D/A Error

CDU REPEATING ACCURACY 45°

13. Enter VERB 33 and press the ENTR pushbutton on the DSKY. The NO ATT lamp shall go out. After approximately 100 seconds, VERB 05 and NOUN 30 shall commence flashing. Record indications on Rows 1, 2 and 3 of the DSKY.

TOTAL ATTITUDE COSINE, TOTAL NULL

NOTE: When only one DSKY is available for testing the following conditions will occur:

a. With the DSKY in the NAV DSKY location the G/N CAUTION lamp on the Monitor panel will not light as specified.

b. With the DSKY in the MAIN DSKY location the PGNS lamp on the Indicator Control panel will not light as specified.

DATE 30 JUN 66

JOB SEMI AUTOMATIC MODE TEST | JDC 12216 REV D PAGE 3 OF 7

SUBSYSTEM G & N SYSTEM | ASSY

14. Perform the following DSKY operations:

a. VERB 33		ENTR	
b. Observe NO ATT lamp lights			
c. Observe VERB 06	NOUN 05	Flashing after approx. 20 seconds	

The GIMBAL LOCK lamps on the DSKY and the Monitor panel shall light, the PGNS lamp on the Indicator Control panel shall light and the G/N CAUTION lamp on the Monitor panel shall light.

15. Enter VERB 33 and press the ENTR pushbutton on the DSKY. After approximately 20 seconds, VERB 06 and NOUN 06 shall commence flashing.

16. Observe the Gimbal Angles, approximately 90.0°, are displayed on Rows 1, 2 and 3 of the DSKY.

17. Set the Voltmeter Input to PAVM SIG 2. Record the total voltage for each corresponding CROSSBAR CONTROL setting on the Primary Signal Selector panel:

Signal	CROSSBAR CONTROL
a. Cos AIG 1X resolver	243
b. Cos AMG 1X resolver	242
c. Cos AOG 1X resolver	241

CDU COMMAND ACCURACY (135°)

18. Enter VERB 33 and press the ENTR pushbutton on the DSKY. After approximately 20 seconds, VERB 06 and NOUN 07 shall commence flashing.

19. Observe and record the Gimbal Angles are displayed on Row 1, Row 2 and Row 3 of the DSKY.

20. Enter VERB 33 and press the ENTR pushbutton on the DSKY. After approximately 20 seconds, VERB 06 and NOUN 10 shall commence flashing. The GIMBAL LOCK indicators on the DSKY and the Monitor panel shall not be lighted. Observe the Gimbal Angles, approximately 135°, 135° and 45° respectively, are indicated on Row 1, Row 2 and Row 3 of the DSKY.

CDU REPEATING ACCURACY (135°)

21. Enter VERB 33 and press the ENTR pushbutton on the DSKY. The NO ATT lamp shall go out. After approximately 100 seconds, VERB 05 and NOUN 30 shall commence flashing. Record indications on Row 1, Row 2 and Row 3 of the DSKY.

CDU COMMAND ACCURACY (225°)

22. Perform the following DSKY operations:

a. VERB 33		ENTR"	
b. Observe NO ATT lamp lights			
c. Observe VERB 06	NOUN 12	Flashing after approx. 20 seconds	

NOTE: When only one DSKY is available for testing the following conditions will occur:

a. With the DSKY in the NAV DSKY location the G/N CAUTION lamp on the Monitor panel will not light as specified.

b. With the DSKY in the MAIN DSKY location the PGNS lamp on the Indicator

DATE 30 JUN 66

SUBSYSTEM G & N SYSTEM | ASSY

Control panel will not light as specified.

23. Observe and record the Gimbal Angles displayed on Row 1, Row 2 and Row 3 of the DSKY. The GIMBAL LOCK lamps on the DSKY and Monitor panel, the G & N CAUTION lamp on the Monitor panel and the PGNS lamp on the Indicator Control panel shall be lighted.

24. Enter VERB 33 and press the ENTR pushbutton on the DSKY. After approximately 20 seconds, VERB 06 and NOUN 13 shall commence flashing. The GIMBAL LOCK indicators on the DSKY and the Monitor panel shall not be lighted. Observe the Gimbal Angles, approximately 225°, 225° and 315° respectively, are indicated on Row 1, Row 2 and Row 3 of the DSKY.

CDU REPEATING ACCURACY (225°)

25. Enter VERB 33 and press the ENTR pushbutton on the DSKY. The NO ATT lamp shall go out. After approximately 100 seconds, VERB 05 and NOUN 30 shall commence flashing. Record indications on Row 1, Row 2 and Row 3 of the DSKY.

TOTAL ATTITUDE OUTPUTS (315°)

26. Perform the following DSKY operations:

a. VERB 33		ENTR	
b. Observe NO ATT lamp lights			
c. Observe VERB 06	NOUN 15	Flashing after approx. 20 seconds	

27. Observe and record the Gimbal Angles displayed on Row 1, Row 2 and Row 3 of the DSKY.

28. Set the Voltmeter Input to PAVM SIG 1 or 2 as indicated below. Record the inphase voltage for each corresponding CROSSBAR CONTROL setting on the Primary Signal Selector panel:

Signal	CROSSBAR CONTROL
a. Sin AIG 1X resolver	144
b. Sin AMG 1X resolver	143
c. Sin AOG 1X resolver	142
d. Cos AIG 1Z resolver	243
e. Cos AMG 1X resolver	242
f. Cos AOG 1X resolver	241

29. Measure and record the phase angle of each of the outputs specified in step 28.

30. Press the INTERFACE LOAD TEST pushbutton and the TEST START pushbutton on the Test Selector panel. The pushbutton shall light. Set the INTERFACE LOAD TEST selector and the CROSSBAR CONTROL on the Primary Signal Selector panel to the following positions and measure and record the indicated inphase voltages.

	INTERFACE LOAD TEST selector	CROSSBAR CONTROL
a.	2	144
b.	2	243
c.	3	143
d.	3	242
e.	4	142
f.	4	241

31. Press the INTERFACE LOAD TEST pushbutton and the TEST STOP pushbutton on the Test Selector panel. The pushbutton shall go out.

CDU REPEATING ACCURACY (315°)

32. Enter VERB 33 and press the ENTR pushbutton on the DSKY. The NO ATT lamp

DATE 30 JUN 66

shall go out. After approximately 100 seconds, VERB 05 and NOUN 30 shall commence flashing. Record indications on Row 1, Row 2 and Row 3 of the DSKY.

-GIMBAL LOCK TEST

NOTE: When only one DSKY is available for testing the following conditions will occur:

a. With the DSKY in the NAV DSKY location the G/N CAUTION lamp on the Monitor panel will not light as specified.

b. With the DSKY in the MAIN DSKY location the PGNS lamp on the Indicator Control panel will not light as specified.

33. Perform the following DSKY operations:

a. VERB 33 ENTR
b. Observe
NO ATT lamp lights
c. Observe
VERB 06 NOUN 17 Flashing after approx. 20 seconds

The GIMBAL LOCK lamps on the DSKY and the Monitor panel, the G & N CAUTION lamp on the Monitor panel and the PGNS alarm lamp on the Indicator Control panel shall light. Observe the Gimbal Angles, approximately 289°, are indicated on Row 1, Row 2 and Row 3of the DSKY.

34. Enter VERB 33 and press the ENTR pushbutton on the DSKY. After approximately 20 seconds, VERB 06 and NOUN 20 shall commence flashing. Insure that Row 1, Row 2 and Row 3 display approximately 0°.

IMU CDU COMMAND RATE TEST

NOTE: When only one DSKY is available for testing the following conditions will occur:

a. With the DSKY in the NAV DSKY location the G/N CAUTION lamp on the Monitor panel will not light as specified.

b. With the DSKY in the MAIN DSKY location the PGNS lamp on the Indicator Control panel will not light as specified.

35. Enter VERB 33 and press the ENTR pushbutton on the DSKY. Observe that the COMP ACTY lamp on the DSKY flashes on for a few seconds and then goes out. After approximately 15 seconds, VERB 06 and NOUN 66 shall commence flashing. Record indications of Row 1 and Row 2 on the DSKY. (MG CDU rate.) The GIMBAL LOCK lamps on the DSKY and the Monitor panel, the G & N CAUTION lamp on the Monitor panel and the PGNS lamp on the Indicator Control panel shall be lighted.

36. Perform the following DSKY operations:

a. VERB 33 ENTR

After approximately 30 seconds, observe that VERB 06 and NOUN 66 commence flashing. Record the indications on Row 1 and Row 2 of the DSKY. (IG CDU rate.) The GIMBAL LOCK lamps on the DSKY and the Monitor panel shall not be lighted.

37. Perform the following DSKY operations:

a. VERB 33 ENTR

After approximately 30 seconds, observe that VERB 06 and NOUN 66 commence flashing. Record the indications on Row 1 and Row 2 of the DSKY. (OG CDU rate.)

IMU CDU FINE FAIL TEST

38. Perform the following DSKY operations:

a. VERB 33 ENTR
b. Observe
NO ATT lamp goes out
c. Observe
VERB 21 NOUN 22 Flashing after approx. 20 seconds

Observe the GIMBAL LOCK lamps on the DSKY and the Monitor panel are not lighted.

39. Perform the following DSKY operations:

a. +00100 ENTR
b. Observe
VERB 22 NOUN 22 Flashing
c. +00100 ENTR
d. Observe
VERB 23 NOUN 22 Flashing
e. +00100 ENTR

The NO ATT lamp shall light momentarily then go out. After approximately 100 seconds, VERB 01, and NOUN 10 shall commence flashing.

40. Row 1 of the DSKY shall indicate 33XXX and Row 3 shall indicate 00030.

IMU CDU COARSE FAIL TEST

41. Perform the following DSKY operations:

a. VERB 33 ENTR
b. Observe
ISS WARNING lamp goes out
c. Observe
VERB 21 NOUN 22 Flashing after approx. 20 seconds
d. +03375 ENTR
e. Observe
VERB 22 NOUN 22 Flashing
f. +03375 ENTR
g. Observe
VERB 23 NOUN 22 Flashing
h. +03375 ENTR

The NO ATT lamp shall light momentarily then go out. After approximately 90 seconds, VERB 01 and NOUN 10 shall commence flashing.

42. Row 1 of the DSKY shall indicate 33XXX and Row 3 shall indicate 00030.

OPTICS RATE TEST

43. Perform the following DSKY operations:

a. VERB 33 ENTR
b. Observe
ISS WARNING lamp goes out
c. Observe
NO ATT lamp lights

---

d. Observe
VERB 06 NOUN 55 Flashing after approx. 20 seconds

44. Set the OPTICS MODE switch on the Indicator Control panel to MAN then to ZERO. Wait 15 seconds.

45. Set the OPTICS MODE switch to CGC.

SHAFT RATE TEST

46. Enter VERB 33 and press the ENTR pushbutton on the DSKY. After approximately 25 seconds, VERB 06 and NOUN 66 shall commence flashing. Record the indications on Row 1 and Row 2.

TRUNNION RATE TEST

47. Perform the following DSKY operations:

a. VERB 33 ENTR

In approximately 15 seconds, VERB 06 and NOUN 66 shall commence flashing. Record the indications on Row 1 and Row 2 of the DSKY.

48. Perform the following DSKY operations:

a. VERB 34 ENTR
b. Observe
PROG lamp indicates 00

49. Press OPTICS POWER ON pushbutton on Test Control panel. The pushbutton shall go out.

INTERVAL

TOOLS AND MATERIAL

1. Perform JDC 12215 to establish a Master Initialization condition.

1A. Press OPTICS POWER ON pushbutton on Test Control panel until pushbutton is lighted.

2. Perform the following DSKY operations:

a. VERB 57		ENTR
b. Observe VERB 21	NOUN 01	Flashing
c. 00010		ENTR
d. Observe VERB 06	NOUN 01	Flashing
e. Observe PROG 07		Displayed

CDU ZERO

3. Enter VERB 33 and press the ENTR pushbutton on the DSKY. The NO ATT lamps shall light. After approximately 20 seconds, VERB 06 and NOUN 02 shall commence flashing.

4. Observe the Gimbal Angles, approximately 0.0°, are displayed on Rows 1, 2 and 3 of the DSKY.

TOTAL ATTITUDE SINE INPHASE, TOTAL NULL

5. Set the Voltmeter Input to PAVM SIG 1. Record the total voltage for each corresponding CROSSBAR CONTROL setting on the Primary Signal Selector panel:

Signal	CROSSBAR CONTROL
a. Sin AIG 1X resolver	144
b. Sin AMG 1X resolver	143
c. Sin AOG 1X resolver	142

VERIFICATION WITH SIDL REQUIRED BEFORE USE

DATE 30 JUN 66

JOB SEMI AUTOMATIC MODE SYSTEM

JDC 12216 REV E PAGE 2 OF 7

SUBSYSTEM G & N SYSTEM

ASSY

6. Enter VERB 33 and press the ENTR pushbutton on the DSKY. After approximately 20 seconds, VERB 06 and NOUN 03 shall commence flashing.

7. Observe and record the Gimbal Angles displayed on Rows 1, 2 and 3 of the DSKY.

TOTAL ATTITUDE OUTPUTS

8. Set the Voltmeter Input to PAVM SIG 1 or 2 as indicated below. Record the inphase voltage for each corresponding CROSSBAR CONTROL setting on the Primary Signal Selector panel:

Signal	CROSSBAR CONTROL
a. Sin AIG 1X resolver	144
b. Sin AMG 1X resolver	143
c. Sin AOG 1X resolver	142
d. Cos AIG 1X resolver	243
e. Cos AMG 1X resolver	242
f. Cos AOG 1X resolver	241

9. Measure the phase angle of each of the outputs specified in step 8.

TOTAL ATTITUDE, BACKUP MODE

10. Press the INTERFACE LOAD TEST pushbutton and the TEST START pushbutton on the Test Selector panel. The pushbutton shall light. Set the INTERFACE LOAD TEST selector, and the CROSSBAR CONTROL on the Primary Signal Selector panel to the following positions and measure and record the indicated inphase voltages.

	INTERFACE LOAD TEST selector	CROSSBAR CONTROL
a.	2	144
b.	2	243
c.	3	143
d.	3	242
e.	4	142
f.	4	241

11. Press the INTERFACE LOAD TEST pushbutton and the TEST STOP pushbutton on the Test Selector panel. The pushbutton shall go out.

IMU CDU AC D/A OUTPUTS

12. Connect Buffered probes to each of the following test points on TPA #2. Record the total voltage indication on the PAVM for each signal:

a. TB4, 45(hi), 49(lo), IG AC D/A Error

b. TB4, 44(hi), 48(lo), MG AC D/A Error

c. TB4, 43(hi), 47(lo), OG AC D/A Error

CDU REPEATING ACCURACY 45°

13. Enter VERB 33 and press the ENTR pushbutton on the DSKY. The NO ATT lamp shall go out. After approximately 100 seconds, VERB 05 and NOUN 30 shall commence flashing. Record indications on Rows 1, 2 and 3 of the DSKY.

TOTAL ATTITUDE COSINE, TOTAL NULL

NOTE: When only one DSKY is available for testing the following conditions will occur:

a. With the DSKY in the NAV DSKY location the G/N CAUTION lamp on the Monitor panel will not light as specified.

b. With the DSKY in the MAIN DSKY location the PGNS lamp on the Indicator Control panel will not light as specified.

27. Observe and record the Gimbal Angles displayed on Row 1, Row 2 and Row 3 of the DSKY.

28. Set the Voltmeter Input to PAVM SIG 1 or 2 as indicated below. Record the inphase voltage for each corresponding CROSSBAR CONTROL setting on the Primary Signal Selector panel:

	Signal	CROSSBAR CONTROL
a.	Sin AIG 1X resolver	144
b.	Sin AMG 1X resolver	143
c.	Sin AOG 1X resolver	142
d.	Cos AIG 1Z resolver	243
e.	Cos AMG 1X resolver	242
f.	Cos AOG 1X resolver	241

29. Measure and record the phase angle of each of the outputs specified in step 28.

30. Press the INTERFACE LOAD TEST pushbutton and the TEST START pushbutton on the Test Selector panel. The pushbutton shall light. Set the INTERFACE LOAD TEST selector and the CROSSBAR CONTROL on the Primary Signal Selector panel to the following positions and measure and record the indicated inphase voltages.

	INTERFACE LOAD TEST selector	CROSSBAR CONTROL
a.	2	144
b.	2	243
c.	3	143
d.	3	242
e.	4	142
f.	4	241

31. Press the INTERFACE LOAD TEST pushbutton and the TEST STOP pushbutton on the Test Selector panel. The pushbutton shall go out.

CDU REPEATING ACCURACY (315°)

32. Enter VERB 33 and press the ENTR pushbutton on the DSKY. The NO ATT lamp

shall go out. After approximately 100 seconds, VERB 05 and NOUN 30 shall commence flashing. Record indications on Row 1, Row 2 and Row 3 of the DSKY.

-GIMBAL LOCK TEST

NOTE: When only one DSKY is available for testing the following conditions will occur:

a. With the DSKY in the NAV DSKY location the G/N CAUTION lamp on the Monitor panel will not light as specified.

b. With the DSKY in the MAIN DSKY location the PGNS lamp on the Indicator Control panel will not light as specified.

33. Perform the following DSKY operations:

a. VERB 33 ENTR
b. Observe
NO ATT lamp lights
c. Observe
VERB 06 NOUN 17 Flashing after approx. 20 seconds

The GIMBAL LOCK lamps on the DSKY and the Monitor panel, the G & N CAUTION lamp on the Monitor panel and the PGNS alarm lamp on the Indicator Control panel shall light. Observe the Gimbal Angles, approximately 289°, are indicated on Row 1, Row 2 and Row 3 of the DSKY.

34. Enter VERB 33 and press the ENTR pushbutton on the DSKY. After approximately 20 seconds, VERB 06 and NOUN 20 shall commence flashing. Insure that Row 1, Row 2 and Row 3 display approximately 0°.

IMU CDU COMMAND RATE TEST

NOTE: When only one DSKY is available for testing the following conditions will occur:

a. With the DSKY in the NAV DSKY location the G/N CAUTION lamp on the Monitor panel will not light as specified.

b. With the DSKY in the MAIN DSKY location the PGNS lamp on the Indicator Control panel will not light as specified.

35. Enter VERB 33 and press the ENTR pushbutton on the DSKY. Observe that the COMP ACTY lamp on the DSKY flashes on for a few seconds and then goes out. After approximately 15 seconds, VERB 06 and NOUN 66 shall commence flashing. Record indications of Row 1 and Row 2 on the DSKY. (MG CDU rate.) The GIMBAL LOCK lamps on the DSKY and the Monitor panel, the G & N CAUTION lamp on the Monitor panel and the PGNS lamp on the Indicator Control panel shall be lighted.

36. Perform the following DSKY operations:

a. VERB 33 ENTR

After approximately 30 seconds, observe that VERB 06 and NOUN 66 commence flashing. Record the indications on Row 1 and Row 2 of the DSKY. (IG CDU rate.) The GIMBAL LOCK lamps on the DSKY and the Monitor panel shall not be lighted.

37. Perform the following DSKY operations:

a. VERB 33 ENTR

After approximately 30 seconds, observe that VERB 06 and NOUN 66 commence flashing. Record the indications on Row 1 and Row 2 of the DSKY. (OG CDU rate.)

IMU CDU FINE FAIL TEST

38. Perform the following DSKY operations:

a. VERB 33 ENTR
b. Observe
NO ATT lamp goes out
c. Observe
VERB 21 NOUN 22 Flashing after approx. 20 seconds

Observe the GIMBAL LOCK lamps on the DSKY and the Monitor panel are not lighted.

39. Perform the following DSKY operations:

a. +00100 ENTR
b. Observe
VERB 22 NOUN 22 Flashing
c. +00100 ENTR
d. Observe
VERB 23 NOUN 22 Flashing
e. +00100 ENTR

The NO ATT lamp shall light momentarily then go out. After approximately 100 seconds, VERB 01, and NOUN 10 shall commence flashing and the ISS WARNING lamp is lighted.

40. Row 1 of the DSKY shall indicate 33XXX and Row 3 shall indicate 00030.

IMU CDU COARSE FAIL TEST

41. Perform the following DSKY operations:

a. VERB 33 ENTR
b. Observe
ISS WARNING lamp goes out
c. Observe
VERB 21 NOUN 22 Flashing after approx. 20 seconds
d. +03375 ENTR
e. Observe
VERB 22 NOUN 22 Flashing
f. +03375 ENTR
g. Observe
VERB 23 NOUN 22 Flashing
h. +03375 ENTR

The NO ATT lamp shall light momentarily then go out. After approximately 90 seconds, VERB 01 and NOUN 10 shall commence flashing and the ISS WARNING lamp is lighted.

42. Row 1 of the DSKY shall indicate 33XXX and Row 3 shall indicate 00030.

OPTICS RATE TEST

43. Perform the following DSKY operations:

a. VERB 33 ENTR
b. Observe
ISS WARNING lamp goes out
c. Observe
NO ATT lamp lights

---

d. Observe
VERB 06 NOUN 55 Flashing after approx. 20 seconds

44. Set the OPTICS MODE switch on the Indicator Control panel to MAN then to ZERO. Wait 15 seconds.

45. Set the OPTICS MODE switch to CGC.

SHAFT RATE TEST

46. Enter VERB 33 and press the ENTR pushbutton on the DSKY. After approximately 25 seconds, VERB 06 and NOUN 66 shall commence flashing. Record the indications on Row 1 and Row 2.

TRUNNION RATE TEST

47. Perform the following DSKY operations:

a. VERB 33 ENTR

In approximately 15 seconds, VERB 06 and NOUN 66 shall commence flashing. Record the indications on Row 1 and Row 2 of the DSKY.

48. Perform the following DSKY operations:

a. VERB 34 ENTR
b. Observe
PROG lamp indicates 00

49. Press OPTICS POWER ON pushbutton on Test Control panel. The pushbutton shall go out.

JOB SEMI AUTOMATIC MODE TEST

JDC 12216 REV. F PAGE 1 OF 7

INITIAL TDRR 29882 D.S. PGS. 5

SUBSYSTEM G & N SYSTEM

ASSY.

DESCRIPTION This test is designed to verify the IMU CDU moding, CDU repeating accuracy, CDU command accuracy, CDU command rate and Attitude Error positioning commands. The test is under CGC program control but provides operator control intervals to make analog measurements.

REFERENCES - PS-2015000

IMPORTANT

INTERVAL

TOOLS AND MATERIAL

1. Perform JDC 12215 to establish a Master Initialization condition.

1A. Press OPTICS POWER ON pushbutton on Test Control panel until pushbutton is lighted.

2. Perform the following DSKY operations:

a.	VERB 57		ENTR
b.	Observe VERB 21	NOUN 01	Flashing
c.	00010		ENTR
d.	Observe VERB 06	NOUN 01	Flashing
e.	Observe PROG 07		Displayed

CDU ZERO

3. Enter VERB 33 and press the ENTR pushbutton on the DSKY. The NO ATT lamps shall light. After approximately 20 seconds, VERB 06 and NOUN 02 shall commence flashing.

4. Observe the Gimbal Angles, approximately 0.0°, are displayed on Rows 1, 2 and 3 of the DSKY.

TOTAL ATTITUDE SINE INPHASE, TOTAL NULL

5. Set the Voltmeter Input to PAVM SIG 1. Record the total voltage for each corresponding CROSSBAR CONTROL setting on the Primary Signal Selector panel:

	Signal	CROSSBAR CONTROL
a.	Sin AIG 1X resolver	144
b.	Sin AMG 1X resolver	143
c.	Sin AOG 1X resolver	142

VERIFICATION WITH SIDL REQUIRED BEFORE USE

---

6. Enter VERB 33 and press the ENTR pushbutton on the DSKY. After approximately 20 seconds, VERB 06 and NOUN 03 shall commence flashing.

7. Observe and record the Gimbal Angles displayed on Rows 1, 2 and 3 of the DSKY.

TOTAL ATTITUDE OUTPUTS

8. Set the Voltmeter Input to PAVM SIG 1 or 2 as indicated below. Record the inphase voltage for each corresponding CROSSBAR CONTROL setting on the Primary Signal Selector panel:

	Signal	CROSSBAR CONTROL
a.	Sin AIG 1X resolver	144
b.	Sin AMG 1X resolver	143
c.	Sin AOG 1X resolver	142
d.	Cos AIG 1X resolver	243
e.	Cos AMG 1X resolver	242
f.	Cos AOG 1X resolver	241

9. Measure the phase angle of each of the outputs specified in step 8.

TOTAL ATTITUDE, BACKUP MODE

10. Press the INTERFACE LOAD TEST pushbutton and the TEST START pushbutton on the Test Selector panel. The pushbutton shall light. Set the INTERFACE LOAD TEST selector, and the CROSSBAR CONTROL on the Primary Signal Selector panel to the following positions and measure and record the indicated inphase voltages.

	INTERFACE LOAD TEST selector	CROSSBAR CONTROL
a.	2	144
b.	2	243
c.	3	143
d.	3	242
e.	4	142
f.	4	241

11. Press the INTERFACE LOAD TEST pushbutton and the TEST STOP pushbutton on the Test Selector panel. The pushbutton shall go out.

IMU CDU AC D/A OUTPUTS

12. Connect Buffered probes to each of the following test points on TPA #2. Record the total voltage indication on the PAVM for each signal:

a. TB4, 45(hi), 49(lo), IG AC D/A Error

b. TB4, 44(hi), 48(lo), MG AC D/A Error

c. TB4, 43(hi), 47(lo), OG AC D/A Error

CDU REPEATING ACCURACY 45°

13. Enter VERB 33 and press the ENTR pushbutton on the DSKY. The NO ATT lamp shall go out. After approximately 100 seconds, VERB 05 and NOUN 30 shall commence flashing. Record indications on Rows 1, 2 and 3 of the DSKY.

TOTAL ATTITUDE COSINE, TOTAL NULL

NOTE: When only one DSKY is available for testing the following conditions will occur:

a. With the DSKY in the NAV DSKY location the G/N CAUTION lamp on the Monitor panel will not light as specified.

b. With the DSKY in the MAIN DSKY location the PGNS lamp on the Indicator Control panel will not light as specified.

---

14. Perform the following DSKY operations:

a.	VERB 33		ENTR
b.	Observe NO ATT lamp lights		
c.	Observe VERB 06	NOUN 05	Flashing after approx. 20 seconds

The GIMBAL LOCK lamps on the DSKY and the Monitor panel shall light, the PGNS lamp on the Indicator Control panel shall light and the G/N CAUTION lamp on the Monitor panel shall light.

15. Enter VERB 33 and press the ENTR pushbutton on the DSKY. After approximately 20 seconds, VERB 06 and NOUN 06 shall commence flashing.

16. Observe the Gimbal Angles, approximately 90.0°, are displayed on Rows 1, 2 and 3 of the DSKY.

17. Set the Voltmeter Input to PAVM SIG 2. Record the total voltage for each corresponding CROSSBAR CONTROL setting on the Primary Signal Selector panel:

	Signal	CROSSBAR CONTROL
a.	Cos AIG 1X resolver	243
b.	Cos AMG 1X resolver	242
c.	Cos AOG 1X resolver	241

CDU COMMAND ACCURACY (135°)

18. Enter VERB 33 and press the ENTR pushbutton on the DSKY. After approximately 20 seconds, VERB 06 and NOUN 07 shall commence flashing.

19. Observe and record the Gimbal Angles are displayed on Row 1, Row 2 and Row 3 of the DSKY.

20. Enter VERB 33 and press the ENTR pushbutton on the DSKY. After approximately 20 seconds, VERB 06 and NOUN 10 shall commence flashing. The GIMBAL LOCK indicators on the DSKY and the Monitor panel shall not be lighted. Observe the Gimbal Angles, approximately 135°, 135° and 45° respectively, are indicated on Row 1, Row 2 and Row 3 of the DSKY.

CDU REPEATING ACCURACY (135°)

21. Enter VERB 33 and press the ENTR pushbutton on the DSKY. The NO ATT lamp shall go out. After approximately 100 seconds, VERB 05 and NOUN 30 shall commence flashing. Record indications on Row 1, Row 2 and Row 3 of the DSKY.

CDU COMMAND ACCURACY (225°)

22. Perform the following DSKY operations:

a.	VERB 33		ENTR"
b.	Observe NO ATT lamp lights		
c.	Observe VERB 06	NOUN 12	Flashing after approx. 20 seconds

NOTE: When only one DSKY is available for testing the following conditions will occur:

a. With the DSKY in the NAV DSKY location the G/N CAUTION lamp on the Monitor panel will not light as specified.

b. With the DSKY in the MAIN DSKY location the PGNS lamp on the Indicator Control panel will not light as specified.

---

23. Observe and record the Gimbal Angles displayed on Row 1, Row 2 and Row 3 of the DSKY. The GIMBAL LOCK lamps on the DSKY and Monitor panel, the G & N CAUTION lamp on the Monitor panel and the PGNS lamp on the Indicator Control panel shall be lighted.

24. Enter VERB 33 and press the ENTR pushbutton on the DSKY. After approximately 20 seconds, VERB 06 and NOUN 13 shall commence flashing. The GIMBAL LOCK indicators on the DSKY and the Monitor panel shall not be lighted. Observe the Gimbal Angles, approximately 225°, 225° and 315° respectively, are indicated on Row 1, Row 2 and Row 3 of the DSKY.

CDU REPEATING ACCURACY (225°)

25. Enter VERB 33 and press the ENTR pushbutton on the DSKY. The NO ATT lamp shall go out. After approximately 100 seconds, VERB 05 and NOUN 30 shall commence flashing. Record indications on Row 1, Row 2 and Row 3 of the DSKY.

TOTAL ATTITUDE OUTPUTS (315°)

26. Perform the following DSKY operations:

a.	VERB 33		ENTR
b.	Observe NO ATT lamp lights		
c.	Observe VERB 06	NOUN 15	Flashing after approx. 20 seconds

27. Observe and record the Gimbal Angles displayed on Row 1, Row 2 and Row 3 of the DSKY.

28. Set the Voltmeter Input to PAVM SIG 1 or 2 as indicated below. Record the inphase voltage for each corresponding CROSSBAR CONTROL setting on the Primary Signal Selector panel:

	Signal	CROSSBAR CONTROL
a.	Sin AIG 1X resolver	144
b.	Sin AMG 1X resolver	143
c.	Sin AOG 1X resolver	142
d.	Cos AIG 1Z resolver	243
e.	Cos AMG 1X resolver	242
f.	Cos AOG 1X resolver	241

29. Measure and record the phase angle of each of the outputs specified in step 28.

30. Press the INTERFACE LOAD TEST pushbutton and the TEST START pushbutton on the Test Selector panel. The pushbutton shall light. Set the INTERFACE LOAD TEST selector and the CROSSBAR CONTROL on the Primary Signal Selector panel to the following positions and measure and record the indicated inphase voltages.

	INTERFACE LOAD TEST selector	CROSSBAR CONTROL
a.	2	144
b.	2	243
c.	3	143
d.	3	242
e.	4	142
f.	4	241

31. Press the INTERFACE LOAD TEST pushbutton and the TEST STOP pushbutton on the Test Selector panel. The pushbutton shall go out.

CDU REPEATING ACCURACY (315°)

32. Enter VERB 33 and press the ENTR pushbutton on the DSKY. The NO ATT lamp

shall go out. After approximately 100 seconds, VERB 05 and NOUN 30 shall commence flashing. Record indications on Row 1, Row 2 and Row 3 of the DSKY.

-GIMBAL LOCK TEST

NOTE: When only one DSKY is available for testing the following conditions will occur:

a. With the DSKY in the NAV DSKY location the G/N CAUTION lamp on the Monitor panel will not light as specified.

b. With the DSKY in the MAIN DSKY location the PGNS lamp on the Indicator Control panel will not light as specified.

33. Perform the following DSKY operations:

a. VERB 33 ENTR

b. Observe
NO ATT lamp lights

c. Observe
VERB 06 NOUN 17 Flashing after approx. 20 seconds

The GIMBAL LOCK lamps on the DSKY and the Monitor panel, the G & N CAUTION lamp on the Monitor panel and the PGNS alarm lamp on the Indicator Control panel shall light. Observe the Gimbal Angles, approximately 289°, are indicated on Row 1, Row 2 and Row 3of the DSKY.

34. Enter VERB 33 and press the ENTR pushbutton on the DSKY. After approximately 20 seconds, VERB 06 and NOUN 20 shall commence flashing. Insure that Row 1, Row 2 and Row 3 display approximately 0°.

IMU CDU COMMAND RATE TEST

NOTE: When only one DSKY is available for testing the following conditions will occur:

a. With the DSKY in the NAV DSKY location the G/N CAUTION lamp on the Monitor panel will not light as specified.

b. With the DSKY in the MAIN DSKY location the PGNS lamp on the Indicator Control panel will not light as specified.

35. Enter VERB 33 and press the ENTR pushbutton on the DSKY. Observe that the COMP ACTY lamp on the DSKY flashes on for a few seconds and then goes out. After approximately 15 seconds, VERB 06 and NOUN 66 shall commence flashing. Record indications of Row 1 and Row 2 on the DSKY. (MG CDU rate.) The GIMBAL LOCK lamps on the DSKY and the Monitor panel, the G & N CAUTION lamp on the Monitor panel and the PGNS lamp on the Indicator Control panel shall be lighted.

36. Perform the following DSKY operations:

a. VERB 33 ENTR

After approximately 30 seconds, observe that VERB 06 and NOUN 66 commence flashing. Record the indications on Row 1 and Row 2 of the DSKY. (IG CDU rate.) The GIMBAL LOCK lamps on the DSKY and the Monitor panel shall not be lighted.

37. Perform the following DSKY operations:

a. VERB 33 ENTR

After approximately 30 seconds, observe that VERB 06 and NOUN 66 commence flashing. Record the indications on Row 1 and Row 2 of the DSKY. (OG CDU rate.)

IMU CDU FINE FAIL TEST

38. Perform the following DSKY operations:

a. VERB 33 ENTR

b. Observe
NO ATT lamp goes out

c. Observe
VERB 21 NOUN 22 Flashing after approx. 20 seconds

Observe the GIMBAL LOCK lamps on the DSKY and the Monitor panel are not lighted.

39. Perform the following DSKY operations:

a. +00100 ENTR

b. Observe
VERB 22 NOUN 22 Flashing

c. +00100 ENTR

d. Observe
VERB 23 NOUN 22 Flashing

e. +00100 ENTR

The NO ATT lamp shall light momentarily then go out. After approximately 100 seconds, VERB 01, and NOUN 10 shall commence flashing and the ISS WARNING lamp is lighted.

40. Row 1 of the DSKY shall indicate 33XXX and Row 3 shall indicate 00030.

IMU CDU COARSE FAIL TEST

41. Perform the following DSKY operations:

a. VERB 33 ENTR

b. Observe
ISS WARNING lamp goes out

c. Observe
VERB 21 NOUN 22 Flashing after approx. 20 seconds

d. +03375 ENTR

e. Observe
VERB 22 NOUN 22 Flashing

f. +03375 ENTR

g. Observe
VERB 23 NOUN 22 Flashing

h. +03375 ENTR

The NO ATT lamp shall light momentarily then go out. After approximately 90 seconds, VERB 01 and NOUN 10 shall commence flashing and the ISS WARNING lamp is lighted.

42. Row 1 of the DSKY shall indicate 33XXX and Row 3 shall indicate 00030.

OPTICS RATE TEST

43. Perform the following DSKY operations:

a. VERB 33 ENTR

b. Observe
ISS WARNING lamp goes out

c. Observe
NO ATT lamp lights

---

d. Observe
VERB 06 NOUN 55 Flashing after approx. 30 seconds

44. Set the OPTICS MODE switch on the Indicator Control panel to MAN then to ZERO. Wait 15 seconds.

45. Set the OPTICS MODE switch to CGC.

SHAFT RATE TEST

46. Enter VERB 33 and press the ENTR pushbutton on the DSKY. After approximately 25 seconds, VERB 06 and NOUN 66 shall commence flashing. Record the indications on Row 1 and Row 2.

TRUNNION RATE TEST

47. Perform the following DSKY operations:

a. VERB 33 ENTR

In approximately 15 seconds, VERB 06 and NOUN 66 shall commence flashing. Record the indications on Row 1 and Row 2 of the DSKY.

48. Perform the following DSKY operations:

a. VERB 34 ENTR

b. Observe
PROG lamp indicates 00

49. Press OPTICS POWER ON pushbutton on Test Control panel. The pushbutton shall go out.

IMPORTANT

INTERVAL

TOOLS AND MATERIAL

1. Perform JDC 12215 to establish a Master Initialization condition.

1A. Press OPTICS POWER ON pushbutton on Test Control panel until pushbutton is lighted.

2. Perform the following DSKY operations:

a. VERB 57 ENTR
b. Observe
VERB 21 NOUN 01 Flashing
c. 00010 ENTR
d. Observe
VERB 06 NOUN 01 Flashing
e. Observe
PROG 07 Displayed

CDU ZERO

3. Enter VERB 33 and press the ENTR pushbutton on the DSKY. The NO ATT lamps shall light. After approximately 20 seconds, VERB 06 and NOUN 02 shall commence flashing.

4. Observe the Gimbal Angles, approximately 0.0^0, are displayed on Rows 1, 2 and 3 of the DSKY.

TOTAL ATTITUDE SINE INPHASE, TOTAL NULL

5. Set the Voltmeter Input to PAVM SIG 1. Record the total voltage for each corresponding CROSSBAR CONTROL setting on the Primary Signal Selector panel:

Signal	CROSSBAR CONTROL
a. Sin AIG 1X resolver	144
b. Sin AMG 1X resolver	143
c. Sin AOG 1X resolver	142

VERIFICATION WITH SIDL REQUIRED BEFORE USE

JOB SEMI AUTOMATIC MODE SYSTEM | JDC 12216 REV G PAGE 2 OF 7

SUBSYSTEM G & N SYSTEM | **ASSY**

6. Enter VERB 33 and press the ENTR pushbutton on the DSKY. After approximately 20 seconds, VERB 06 and NOUN 03 shall commence flashing.

7. Observe and record the Gimbal Angles displayed on Rows 1, 2 and 3 of the DSKY.

TOTAL ATTITUDE OUTPUTS

8. Set the Voltmeter Input to PAVM SIG 1 or 2 as indicated below. Record the inphase voltage for each corresponding CROSSBAR CONTROL setting on the Primary Signal Selector panel:

Signal	CROSSBAR CONTROL
a. Sin AIG 1X resolver	144
b. Sin AMG 1X resolver	143
c. Sin AOG 1X resolver	142
d. Cos AIG 1X resolver	243
e. Cos AMG 1X resolver	242
f. Cos AOG 1X resolver	241

9. Measure the phase angle of each of the outputs specified in step 8.

TOTAL ATTITUDE, BACKUP MODE

10. Press the INTERFACE LOAD TEST pushbutton and the TEST START pushbutton on the Test Selector panel. The pushbutton shall light. Set the INTERFACE LOAD TEST selector, and the CROSSBAR CONTROL on the Primary Signal Selector panel to the following positions and measure and record the indicated inphase voltages.

	INTERFACE LOAD TEST selector	CROSSBAR CONTROL
a.	2	144
b.	2	243
c.	3	143
d.	3	242
e.	4	142
f.	4	241

11. Press the INTERFACE LOAD TEST pushbutton and the TEST STOP pushbutton on the Test Selector panel. The pushbutton shall go out.

IMU CDU AC D/A OUTPUTS

12. Connect Buffered probes to each of the following test points on TPA #2. Record the total voltage indication on the PAVM for each signal:

a. TB4, 45(hi), 49(lo), IG AC D/A Error
b. TB4, 44(hi), 48(lo), MG AC D/A Error
c. TB4, 43(hi), 47(lo), OG AC D/A Error

CDU REPEATING ACCURACY 45°

13. Enter VERB 33 and press the ENTR pushbutton on the DSKY. The NO ATT lamp shall go out. After approximately 100 seconds, VERB 05 and NOUN 30 shall commence flashing. Record indications on Rows 1, 2 and 3 of the DSKY.

TOTAL ATTITUDE COSINE, TOTAL NULL

NOTE: When only one DSKY is available for testing the following conditions will occur:

a. With the DSKY in the NAV DSKY location the G/N CAUTION lamp on the Monitor panel will not light as specified.

b. With the DSKY in the MAIN DSKY location the PGNS lamp on the Indicator Control panel will not light as specified.

DATE 30 JUN 66

JOB SEMI AUTOMATIC MODE TEST | JDC 12216 REV G PAGE 3 OF 7

SUBSYSTEM G & N SYSTEM | **ASSY**

14. Perform the following DSKY operations:

a. VERB 33 ENTR
b. Observe
NO ATT lamp lights
c. Observe
VERB 06 NOUN 05 Flashing after approx. 20 seconds

The GIMBAL LOCK lamps on the DSKY and the Monitor panel shall light, the PGNS lamp on the Indicator Control panel shall light and the G/N CAUTION lamp on the Monitor panel shall light.

15. Enter VERB 33 and press the ENTR pushbutton on the DSKY. After approximately 20 seconds, VERB 06 and NOUN 06 shall commence flashing.

16. Observe the Gimbal Angles, approximately 90.0°, are displayed on Rows 1, 2 and 3 of the DSKY.

17. Set the Voltmeter Input to PAVM SIG 2. Record the total voltage for each corresponding CROSSBAR CONTROL setting on the Primary Signal Selector panel:

Signal	CROSSBAR CONTROL
a. Cos AIG 1X resolver	243
b. Cos AMG 1X resolver	242
c. Cos AOG 1X resolver	241

CDU COMMAND ACCURACY (135°)

18. Enter VERB 33 and press the ENTR pushbutton on the DSKY. After approximately 20 seconds, VERB 06 and NOUN 07 shall commence flashing.

19. Observe and record the Gimbal Angles are displayed on Row 1, Row 2 and Row 3 of the DSKY.

20. Enter VERB 33 and press the ENTR pushbutton on the DSKY. After approximately 20 seconds, VERB 06 and NOUN 10 shall commence flashing. The GIMBAL LOCK indicators on the DSKY and the Monitor panel shall not be lighted. Observe the Gimbal Angles, approximately 135°, 135° and 45° respectively, are indicated on Row 1, Row 2 and Row 3 of the DSKY.

CDU REPEATING ACCURACY (135°)

21. Enter VERB 33 and press the ENTR pushbutton on the DSKY. The NO ATT lamp shall go out. After approximately 100 seconds, VERB 05 and NOUN 30 shall commence flashing. Record indications on Row 1, Row 2 and Row 3 of the DSKY.

CDU COMMAND ACCURACY (225°)

22. Perform the following DSKY operations:

a. VERB 33 ENTR"
b. Observe
NO ATT lamp lights
c. Observe
VERB 06 NOUN 12 Flashing after approx. 20 seconds

NOTE: When only one DSKY is available for testing the following conditions will occur:

a. With the DSKY in the NAV DSKY location the G/N CAUTION lamp on the Monitor panel will not light as specified.

b. With the DSKY in the MAIN DSKY location the PGNS lamp on the Indicator

Control panel will not light as specified.

23. Observe and record the Gimbal Angles displayed on Row 1, Row 2 and Row 3 of the DSKY. The GIMBAL LOCK lamps on the DSKY and Monitor panel, the G & N CAUTION lamp on the Monitor panel and the PGNS lamp on the Indicator Control panel shall be lighted.

24. Enter VERB 33 and press the ENTR pushbutton on the DSKY. After approximately 20 seconds, VERB 06 and NOUN 13 shall commence flashing. The GIMBAL LOCK indicators on the DSKY and the Monitor panel shall not be lighted. Observe the Gimbal Angles, approximately 225°, 225° and 315° respectively, are indicated on Row 1, Row 2 and Row 3 of the DSKY.

CDU REPEATING ACCURACY (225°)

25. Enter VERB 33 and press the ENTR pushbutton on the DSKY. The NO ATT lamp shall go out. After approximately 100 seconds, VERB 05 and NOUN 30 shall commence flashing. Record indications on Row 1, Row 2 and Row 3 of the DSKY.

TOTAL ATTITUDE OUTPUTS (315°)

26. Perform the following DSKY operations:

a. VERB 33 ENTR
b. Observe
NO ATT lamp lights
c. Observe
VERB 06 NOUN 15 Flashing after approx. 20 seconds

27. Observe and record the Gimbal Angles displayed on Row 1, Row 2 and Row 3 of the DSKY.

28. Set the Voltmeter Input to PAVM SIG 1 or 2 as indicated below. Record the inphase voltage for each corresponding CROSSBAR CONTROL setting on the Primary Signal Selector panel:

Signal	CROSSBAR CONTROL
a. Sin AIG 1X resolver	144
b. Sin AMG 1X resolver	143
c. Sin AOG 1X resolver	142
d. Cos AIG 1Z resolver	243
e. Cos AMG 1X resolver	242
f. Cos AOG 1X resolver	241

29. Measure and record the phase angle of each of the outputs specified in step 28.

30. Press the INTERFACE LOAD TEST pushbutton and the TEST START pushbutton on the Test Selector panel. The pushbutton shall light. Set the INTERFACE LOAD TEST selector and the CROSSBAR CONTROL on the Primary Signal Selector panel to the following positions and measure and record the indicated inphase voltages.

	INTERFACE LOAD TEST selector	CROSSBAR CONTROL
a.	2	144
b.	2	243
c.	3	143
d.	3	242
e.	4	142
f.	4	241

31. Press the INTERFACE LOAD TEST pushbutton and the TEST STOP pushbutton on the Test Selector panel. The pushbutton shall go out.

CDU REPEATING ACCURACY (315°)

32. Enter VERB 33 and press the ENTR pushbutton on the DSKY. The NO ATT lamp

DATE 30 JUN 66

shall go out. After approximately 100 seconds, VERB 05 and NOUN 30 shall commence flashing. Record indications on Row 1, Row 2 and Row 3 of the DSKY.

-GIMBAL LOCK TEST

NOTE: When only one DSKY is available for testing the following conditions will occur:

a. With the DSKY in the NAV DSKY location the G/N CAUTION lamp on the Monitor panel will not light as specified.

b. With the DSKY in the MAIN DSKY location the PGNS lamp on the Indicator Control panel will not light as specified.

33. Perform the following DSKY operations:

a. VERB 33 ENTR
b. Observe
NO ATT lamp lights
c. Observe
VERB 06 NOUN 17 Flashing after approx. 20 seconds

The GIMBAL LOCK lamps on the DSKY and the Monitor panel, the G & N CAUTION lamp on the Monitor panel and the PGNS alarm lamp on the Indicator Control panel shall light. Observe the Gimbal Angles, approximately 289°, are indicated on Row 1, Row 2 and Row 3of the DSKY.

34. Enter VERB 33 and press the ENTR pushbutton on the DSKY. After approximately 20 seconds, VERB 06 and NOUN 20 shall commence flashing. Insure that Row 1, Row 2 and Row 3 display approximately 0°.

IMU CDU COMMAND RATE TEST

NOTE: When only one DSKY is available for testing the following conditions will occur:

a. With the DSKY in the NAV DSKY location the G/N CAUTION lamp on the Monitor panel will not light as specified.

b. With the DSKY in the MAIN DSKY location the PGNS lamp on the Indicator Control panel will not light as specified.

35. Enter VERB 33 and press the ENTR pushbutton on the DSKY. Observe that the COMP ACTY lamp on the DSKY flashes on for a few seconds and then goes out. After approximately 15 seconds, VERB 06 and NOUN 66 shall commence flashing. Record indications of Row 1 and Row 2 on the DSKY. (MG CDU rate.) The GIMBAL LOCK lamps on the DSKY and the Monitor panel, the G & N CAUTION lamp on the Monitor panel and the PGNS lamp on the Indicator Control panel shall be lighted.

36. Perform the following DSKY operations:

a. VERB 33 ENTR

After approximately 30 seconds, observe that VERB 06 and NOUN 66 commence flashing. Record the indications on Row 1 and Row 2 of the DSKY. (IG CDU rate.) The GIMBAL LOCK lamps on the DSKY and the Monitor panel shall not be lighted.

37. Perform the following DSKY operations:

a. VERB 33 ENTR

After approximately 30 seconds, observe that VERB 06 and NOUN 66 commence flashing. Record the indications on Row 1 and Row 2 of the DSKY. (OG CDU rate.)

IMU CDU FINE FAIL TEST

38. Perform the following DSKY operations:

a. VERB 33 ENTR
b. Observe
NO ATT lamp goes out
c. Observe
VERB 21 NOUN 22 Flashing after approx. 20 seconds

Observe the GIMBAL LOCK lamps on the DSKY and the Monitor panel are not lighted.

39. Perform the following DSKY operations:

a. +00100 ENTR
b. Observe
VERB 22 NOUN 22 Flashing
c. +00100 ENTR
d. Observe
VERB 23 NOUN 22 Flashing
e. +00100 ENTR

The NO ATT lamp shall light momentarily then go out. After approximately 100 seconds, VERB 01, and NOUN 10 shall commence flashing and the ISS WARNING lamp is lighted.

40. Row 1 of the DSKY shall indicate 33XXX and Row 3 shall indicate 00030.

IMU CDU COARSE FAIL TEST

41. Perform the following DSKY operations:

a. VERB 33 ENTR
b. Observe
ISS WARNING lamp goes out
c. Observe
VERB 21 NOUN 22 Flashing after approx. 20 seconds
d. +03375 ENTR
e. Observe
VERB 22 NOUN 22 Flashing
f. +03375 ENTR
g. Observe
VERB 23 NOUN 22 Flashing
h. +03375 ENTR

The NO ATT lamp shall light momentarily then go out. After approximately 90 seconds, VERB 01 and NOUN 10 shall commence flashing and the ISS WARNING lamp is lighted.

42. Row 1 of the DSKY shall indicate 33XXX and Row 3 shall indicate 00030.

OPTICS RATE TEST

43. Perform the following DSKY operations:

a. VERB 33 ENTR
b. Observe
ISS WARNING lamp goes out
c. Observe
NO ATT lamp lights

d. Observe
VERB 06 NOUN 55 Flashing after approx. 20 seconds

44. Set the OPTICS MODE switch on the Indicator Control panel to MAN then to ZERO. Wait 15 seconds.

45. Set the OPTICS MODE switch to CMC.

SHAFT RATE TEST

46. Enter VERB 33 and press the ENTR pushbutton on the DSKY. After approximately 25 seconds, VERB 06 and NOUN 66 shall commence flashing. Record the indications on Row 1 and Row 2.

TRUNNION RATE TEST

47. Perform the following DSKY operations:

a. VERB 33 ENTR

In approximately 15 seconds, VERB 06 and NOUN 66 shall commence flashing. Record the indications on Row 1 and Row 2 of the DSKY.

48. Perform the following DSKY operations:

a. VERB 34 ENTR
b. Observe
PROG lamp indicates 00

49. Press OPTICS POWER ON pushbutton on Test Control panel. The pushbutton shall go out.

IMPORTANT

INTERVAL

TOOLS AND MATERIAL

1. Perform JDC 12215 to establish a Master Initialization condition.

1A. Press OPTICS POWER ON pushbutton on Test Control panel until pushbutton is lighted.

2. Perform the following DSKY operations:

a. VERB 57 ENTR

b. Observe VERB 21 NOUN 01 Flashing

c. 00010 ENTR

d. Observe VERB 06 NOUN 01 Flashing

e. Observe PROG 07 Displayed

CDU ZERO

3. Enter VERB 33 and press the ENTR pushbutton on the DSKY. The NO ATT lamps shall light. After approximately 20 seconds, VERB 06 and NOUN 02 shall commence flashing.

4. Observe the Gimbal Angles, approximately 0.0°, are displayed on Rows 1, 2 and 3 of the DSKY.

TOTAL ATTITUDE SINE INPHASE, TOTAL NULL

5. Set the Voltmeter Input to PAVM SIG 1. Record the total voltage for each corresponding CROSSBAR CONTROL setting on the Primary Signal Selector panel:

	Signal	CROSSBAR CONTROL
a.	Sin AIG 1X resolver	144
b.	Sin AMG 1X resolver	143
c.	Sin AOG 1X resolver	142

VERIFICATION WITH SIDL REQUIRED BEFORE USE

DATE 30 JUN 66

---

6. Enter VERB 33 and press the ENTR pushbutton on the DSKY. After approximately 20 seconds, VERB 06 and NOUN 03 shall commence flashing.

7. Observe and record the Gimbal Angles displayed on Rows 1, 2 and 3 of the DSKY.

TOTAL ATTITUDE OUTPUTS

8. Set the Voltmeter Input to PAVM SIG 1 or 2 as indicated below. Record the inphase voltage for each corresponding CROSSBAR CONTROL setting on the Primary Signal Selector panel:

	Signal	CROSSBAR CONTROL
a.	Sin AIG 1X resolver	144
b.	Sin AMG 1X resolver	143
c.	Sin AOG 1X resolver	142
d.	Cos AIG 1X resolver	243
e.	Cos AMG 1X resolver	242
f.	Cos AOG 1X resolver	241

9. Measure the phase angle of each of the outputs specified in step 8.

TOTAL ATTITUDE, BACKUP MODE

10. Press the INTERFACE LOAD TEST pushbutton and the TEST START pushbutton on the Test Selector panel. The pushbutton shall light. Set the INTERFACE LOAD TEST selector, and the CROSSBAR CONTROL on the Primary Signal Selector panel to the following positions and measure and record the indicated inphase voltages.

	INTERFACE LOAD TEST selector	CROSSBAR CONTROL
a.	2	144
b.	2	243
c.	3	143
d.	3	242
e.	4	142
f.	4	241

11. Press the INTERFACE LOAD TEST pushbutton and the TEST STOP pushbutton on the Test Selector panel. The pushbutton shall go out.

IMU CDU AC D/A OUTPUTS

12. Connect Buffered probes to each of the following test points on TPA #2. Record the total voltage indication on the PAVM for each signal:

a. TB4, 45(hi), 49(lo), IG AC D/A Error

b. TB4, 44(hi), 48(lo), MG AC D/A Error

c. TB4, 43(hi), 47(lo), OG AC D/A Error

CDU REPEATING ACCURACY 45°

13. Enter VERB 33 and press the ENTR pushbutton on the DSKY. The NO ATT lamp shall go out. After approximately 100 seconds, VERB 05 and NOUN 30 shall commence flashing. Record indications on Rows 1, 2 and 3 of the DSKY.

TOTAL ATTITUDE COSINE, TOTAL NULL

NOTE: When only one DSKY is available for testing the following conditions will occur:

a. With the DSKY in the NAV DSKY location the G/N CAUTION lamp on the Monitor panel will not light as specified.

b. With the DSKY in the MAIN DSKY location the PGNS lamp on the Indicator Control panel will not light as specified.

---

14. Perform the following DSKY operations:

a. VERB 33 ENTR

b. Observe NO ATT lamp lights

c. Observe VERB 06 NOUN 05 Flashing after approx. 20 seconds

The GIMBAL LOCK lamps on the DSKY and the Monitor panel shall light, the PGNS lamp on the Indicator Control panel shall light and the G/N CAUTION lamp on the Monitor panel shall light.

15. Enter VERB 33 and press the ENTR pushbutton on the DSKY. After approximately 20 seconds, VERB 06 and NOUN 06 shall commence flashing.

16. Observe the Gimbal Angles, approximately 90.0°, are displayed on Rows 1, 2 and 3 of the DSKY.

17. Set the Voltmeter Input to PAVM SIG 2. Record the total voltage for each corresponding CROSSBAR CONTROL setting on the Primary Signal Selector panel:

	Signal	CROSSBAR CONTROL
a.	Cos AIG 1X resolver	243
b.	Cos AMG 1X resolver	242
c.	Cos AOG 1X resolver	241

CDU COMMAND ACCURACY (135°)

18. Enter VERB 33 and press the ENTR pushbutton on the DSKY. After approximately 20 seconds, VERB 06 and NOUN 07 shall commence flashing.

19. Observe and record the Gimbal Angles are displayed on Row 1, Row 2 and Row 3 of the DSKY.

20. Enter VERB 33 and press the ENTR pushbutton on the DSKY. After approximately 20 seconds, VERB 06 and NOUN 10 shall commence flashing. The GIMBAL LOCK indicators on the DSKY and the Monitor panel shall not be lighted. Observe the Gimbal Angles, approximately 135°, 135° and 45° respectively, are indicated on Row 1, Row 2 and Row 3 of the DSKY.

CDU REPEATING ACCURACY (135°)

21. Enter VERB 33 and press the ENTR pushbutton on the DSKY. The NO ATT lamp shall go out. After approximately 100 seconds, VERB 05 and NOUN 30 shall commence flashing. Record indications on Row 1, Row 2 and Row 3 of the DSKY.

CDU COMMAND ACCURACY (225°)

22. Perform the following DSKY operations:

a. VERB 33 ENTR"

b. Observe NO ATT lamp lights

c. Observe VERB 06 NOUN 12 Flashing after approx. 20 seconds

NOTE: When only one DSKY is available for testing the following conditions will occur:

a. With the DSKY in the NAV DSKY location the G/N CAUTION lamp on the Monitor panel will not light as specified.

b. With the DSKY in the MAIN DSKY location the PGNS lamp on the Indicator

---

Control panel will not light as specified.

23. Observe and record the Gimbal Angles displayed on Row 1, Row 2 and Row 3 of the DSKY. The GIMBAL LOCK lamps on the DSKY and Monitor panel, the G & N CAUTION lamp on the Monitor panel and the PGNS lamp on the Indicator Control panel shall be lighted.

24. Enter VERB 33 and press the ENTR pushbutton on the DSKY. After approximately 20 seconds, VERB 06 and NOUN 13 shall commence flashing. The GIMBAL LOCK indicators on the DSKY and the Monitor panel shall not be lighted. Observe the Gimbal Angles, approximately 225°, 225° and 315° respectively, are indicated on Row 1, Row 2 and Row 3 of the DSKY.

CDU REPEATING ACCURACY (225°)

25. Enter VERB 33 and press the ENTR pushbutton on the DSKY. The NO ATT lamp shall go out. After approximately 100 seconds, VERB 05 and NOUN 30 shall commence flashing. Record indications on Row 1, Row 2 and Row 3 of the DSKY.

TOTAL ATTITUDE OUTPUTS (315°)

26. Perform the following DSKY operations:

a. VERB 33 ENTR

b. Observe NO ATT lamp lights

c. Observe VERB 06 NOUN 15 Flashing after approx. 20 seconds

27. Observe and record the Gimbal Angles displayed on Row 1, Row 2 and Row 3 of the DSKY.

28. Set the Voltmeter Input to PAVM SIG 1 or 2 as indicated below. Record the inphase voltage for each corresponding CROSSBAR CONTROL setting on the Primary Signal Selector panel:

	Signal	CROSSBAR CONTROL
a.	Sin AIG 1X resolver	144
b.	Sin AMG 1X resolver	143
c.	Sin AOG 1X resolver	142
d.	Cos AIG 1Z resolver	243
e.	Cos AMG 1X resolver	242
f.	Cos AOG 1X resolver	241

29. Measure and record the phase angle of each of the outputs specified in step 28.

30. Press the INTERFACE LOAD TEST pushbutton and the TEST START pushbutton on the Test Selector panel. The pushbutton shall light. Set the INTERFACE LOAD TEST selector and the CROSSBAR CONTROL on the Primary Signal Selector panel to the following positions and measure and record the indicated inphase voltages.

	INTERFACE LOAD TEST selector	CROSSBAR CONTROL
a.	2	144
b.	2	243
c.	3	143
d.	3	242
e.	4	142
f.	4	241

31. Press the INTERFACE LOAD TEST pushbutton and the TEST STOP pushbutton on the Test Selector panel. The pushbutton shall go out.

CDU REPEATING ACCURACY (315°)

32. Enter VERB 33 and press the ENTR pushbutton on the DSKY. The NO ATT lamp

shall go out. After approximately 100 seconds, VERB 05 and NOUN 30 shall commence flashing. Record indications on Row 1, Row 2 and Row 3 of the DSKY.

-GIMBAL LOCK TEST

NOTE: When only one DSKY is available for testing the following conditions will occur:

a. With the DSKY in the NAV DSKY location the G/N CAUTION lamp on the Monitor panel will not light as specified.

b. With the DSKY in the MAIN DSKY location the PGNS lamp on the Indicator Control panel will not light as specified.

33. Perform the following DSKY operations:

a. VERB 33			ENTR
b. Observe NO ATT lamp lights			
c. Observe VERB 06	NOUN 17		Flashing after approx. 20 seconds

The GIMBAL LOCK lamps on the DSKY and the Monitor panel, the G & N CAUTION lamp on the Monitor panel and the PGNS alarm lamp on the Indicator Control panel shall light. Observe the Gimbal Angles, approximately 289°, are indicated on Row 1, Row 2 and Row 3of the DSKY.

34. Enter VERB 33 and press the ENTR pushbutton on the DSKY. After approximately 20 seconds, VERB 06 and NOUN 20 shall commence flashing. Insure that Row 1, Row 2 and Row 3 display approximately 0°.

IMU CDU COMMAND RATE TEST

NOTE: When only one DSKY is available for testing the following conditions will occur:

a. With the DSKY in the NAV DSKY location the G/N CAUTION lamp on the Monitor panel will not light as specified.

b. With the DSKY in the MAIN DSKY location the PGNS lamp on the Indicator Control panel will not light as specified.

35. Enter VERB 33 and press the ENTR pushbutton on the DSKY. Observe that the COMP ACTY lamp on the DSKY flashes on for a few seconds and then goes out. After approximately 15 seconds, VERB 06 and NOUN 66 shall commence flashing. Record indications of Row 1 and Row 2 on the DSKY. (MG CDU rate.) The GIMBAL LOCK lamps on the DSKY and the Monitor panel, the G & N CAUTION lamp on the Monitor panel and the PGNS lamp on the Indicator Control panel shall be lighted.

36. Perform the following DSKY operations:

a. VERB 33 ENTR

After approximately 30 seconds, observe that VERB 06 and NOUN 66 commence flashing. Record the indications on Row 1 and Row 2 of the DSKY. (IG CDU rate.) The GIMBAL LOCK lamps on the DSKY and the Monitor panel shall not be lighted.

37. Perform the following DSKY operations:

a. VERB 33 ENTR

After approximately 30 seconds, observe that VERB 06 and NOUN 66 commence flashing. Record the indications on Row 1 and Row 2 of the DSKY. (OG CDU rate.)

IMU CDU FINE FAIL TEST

38. Perform the following DSKY operations:

a. VERB 33			ENTR
b. Observe NO ATT lamp goes out			
c. Observe VERB 21	NOUN 22		Flashing after approx. 20 seconds

Observe the GIMBAL LOCK lamps on the DSKY and the Monitor panel are not lighted.

39. Perform the following DSKY operations:

a. +00100			ENTR
b. Observe VERB 22	NOUN 22		Flashing
c. +00100			ENTR
d. Observe VERB 23	NOUN 22		Flashing
e. +00100			ENTR

The NO ATT lamp shall light momentarily then go out. After approximately 100 seconds, VERB 01, and NOUN 10 shall commence flashing and the ISS WARNING lamp is lighted.

40. Row 1 of the DSKY shall indicate 33XXX and Row 3 shall indicate 00030.

IMU CDU COARSE FAIL TEST

41. Perform the following DSKY operations:

a. VERB 33			ENTR
b. Observe ISS WARNING lamp goes out			
c. Observe VERB 21	NOUN 22		Flashing after approx. 20 seconds
d. +03375			ENTR
e. Observe VERB 22	NOUN 22		Flashing
f. +03375			ENTR
g. Observe VERB 23	NOUN 22		Flashing
h. +03375			ENTR

The NO ATT lamp shall light momentarily then go out. After approximately 90 seconds, VERB 01 and NOUN 10 shall commence flashing and the ISS WARNING lamp is lighted.

42. Row 1 of the DSKY shall indicate 33XXX and Row 3 shall indicate 00030.

OPTICS RATE TEST

43. Perform the following DSKY operations:

a. VERB 33			ENTR
b. Observe ISS WARNING lamp goes out			
c. Observe NO ATT lamp lights			

---

d. Observe VERB 06	NOUN 55		Flashing after approx. 20 seconds

NOTE: Step 44 applies to Indicator Control panel 2021290 only.

44. Set OPTICS ZERO switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS ZERO switch to OFF. Set OPTICS MODE switch to CMC.

NOTE: Step 45 applies to all Indicator Control panels except 2021290.

45. Set OPTICS MODE switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS MODE switch to CMC.

SHAFT RATE TEST

46. Enter VERB 33 and press the ENTR pushbutton on the DSKY. After approximately 25 seconds, VERB 06 and NOUN 66 shall commence flashing. Record the indications on Row 1 and Row 2.

TRUNNION RATE TEST

47. Perform the following DSKY operations:

a. VERB 33 ENTR

In approximately 15 seconds, VERB 06 and NOUN 66 shall commence flashing. Record the indications on Row 1 and Row 2 of the DSKY.

48. Perform the following DSKY operations:

a. VERB 34			ENTR
b. Observe PROG lamp indicates 00			

49. Press OPTICS POWER ON pushbutton on Test Control panel. The pushbutton shall go out.

JOB SEMI AUTOMATIC MODE TEST

JDC 12216 REV. J PAGE 1 OF 7

INITIAL TDRR 29882 D.S. PGS 5

SUBSYSTEM G & N SYSTEM

ASSY.

DESCRIPTION This test is designed to verify the IMU CDU moding, CDU repeating accuracy, CDU command accuracy, CDU command rate and Attitude Error positioning commands. The test is under CGC program control but provides operator control intervals to make analog measurements.

IMPORTANT

INTERVAL

TOOLS AND MATERIAL

1. Perform JDC 12215, excluding steps 16 and 17, to establish a Master Initialization condition.

1A. Press OPTICS POWER ON pushbutton on Test Control panel until pushbutton is lighted.

2. Perform the following DSKY operations:

a.	VERB 57		ENTR
b.	Observe VERB 21	NOUN 01	Flashing
c.	00010		ENTR
d.	Observe VERB 06	NOUN 01	Flashing
e.	Observe PROG 07		Displayed

CDU ZERO

3. Enter VERB 33 and press the ENTR pushbutton on the DSKY. The NO ATT lamps shall light. After approximately 20 seconds, VERB 06 and NOUN 02 shall commence flashing.

4. Observe the Gimbal Angles, approximately 0.0°, are displayed on Rows 1, 2 and 3 of the DSKY.

TOTAL ATTITUDE SINE INPHASE, TOTAL NULL

5. Set the Voltmeter Input to PAVM SIG 1. Record the total voltage for each corresponding CROSSBAR CONTROL setting on the Primary Signal Selector panel:

Signal	CROSSBAR CONTROL
a. Sin AIG 1X resolver	144
b. Sin AMG 1X resolver	143
c. Sin AOG 1X resolver	142

VERIFICATION WITH SIDL REQUIRED BEFORE USE

DATE 30 JUN 66

JOB SEMI AUTOMATIC MODE SYSTEM

JDC 12216 REV J PAGE 2 OF 7

SUBSYSTEM G & N SYSTEM

ASSY

6. Enter VERB 33 and press the ENTR pushbutton on the DSKY. After approximately 20 seconds, VERB 06 and NOUN 03 shall commence flashing.

7. Observe and record the Gimbal Angles displayed on Rows 1, 2 and 3 of the DSKY.

TOTAL ATTITUDE OUTPUTS

8. Set the Voltmeter Input to PAVM SIG 1 or 2 as indicated below. Record the inphase voltage for each corresponding CROSSBAR CONTROL setting on the Primary Signal Selector panel:

Signal	CROSSBAR CONTROL
a. Sin AIG 1X resolver	144
b. Sin AMG 1X resolver	143
c. Sin AOG 1X resolver	142
d. Cos AIG 1X resolver	243
e. Cos AMG 1X resolver	242
f. Cos AOG 1X resolver	241

9. Measure the phase angle of each of the outputs specified in step 8.

TOTAL ATTITUDE, BACKUP MODE

10. Press the INTERFACE LOAD TEST pushbutton and the TEST START pushbutton on the Test Selector panel. The pushbutton shall light. Set the INTERFACE LOAD TEST selector, and the CROSSBAR CONTROL on the Primary Signal Selector panel to the following positions and measure and record the indicated inphase voltages.
